Preface

It was a pleasure to have Artur Yusupov working as my second, both personally and professionally. It is therefore an honour for me to write the preface to this series of books.

This book was created by expanding and improving the original online lessons from the Chess Tigers University. As an honorary member of the Chess Tigers, it has given me great pleasure to see this logical follow-up take concrete form and meet the twin challenges of being both a valuable textbook and a bedside book.

It was in 1994 that I met Artur Yusupov in the semi-finals of the Candidates' cycle in Wijk aan Zee. I managed to come out ahead by 4.5–2.5, but I recognized that Artur harboured great potential, both in his chess knowledge and extensive match experience.

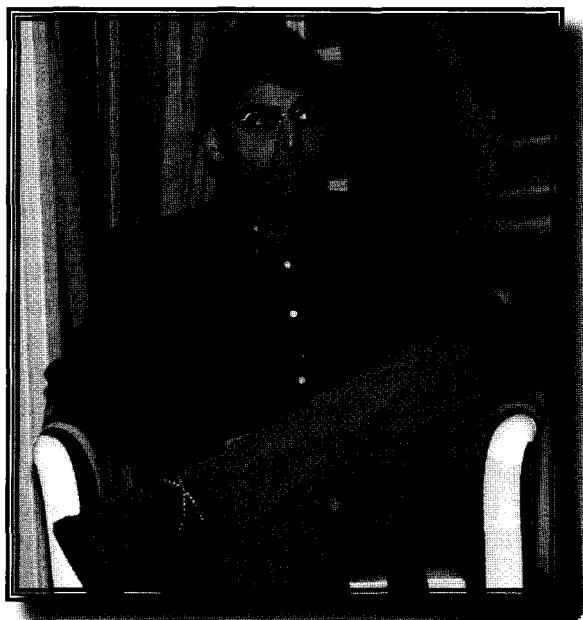

Artur's systematic and professional approach to analysing games was the decisive factor in having him as my second in the World Championship Finals in New York 1995 and Lausanne 1998. His mastery of the methods of the Russian chess school was very helpful in the preparation for the matches, as well as during the matches themselves. It was his idea that I should play the Trompovsky in the last game in Lausanne. I was 3–2 down, but was able to level the match at 3–3 and thus force a play-off.

I am still very grateful for everything that Artur did for me.

Artur's vast experience as a trainer convinced him that there is a considerable need for better tuition for amateurs. Matching the level to the needs of the student is perhaps not too difficult, but the masterstroke is structuring the information in such a way that makes it immediately useful for amateurs. I am naturally enthusiastic about the rich variety of material in this series, which can help beginners become top amateurs.

I wish Artur Yusupov all the best with the publication of this series of books. Making this work available in English means that even more people who are keen to learn can enjoy it to the full.

World Champion, Viswanathan Anand

Introduction

During my many years of work as a chess trainer, I have noticed that there are only a few books which are really suitable for most amateur players. Some good books treat individual aspects of the game (middlegame or endgame, tactics or positional play) without paying any real heed to the readers' playing levels. This brought about the idea of working out a teaching programme aimed specifically at a certain playing strength. Such teaching programmes, in a brief form and intended as systematic help for trainers, are common only in Russia, where they are very popular. One very well known and much valued example is a publication by Golenischev, which inspired some aspects of my methodology.

In 2003 I began a 3 year training programme in my chess academy. Three groups were set up according to playing strength: under Elo 1500, under Elo 1800 and under Elo 2100. Each annual stage consisted of 24 teaching modules and 24 tests, plus a final test at the end of the course.

This programme was later taken over, in a different form, by the Chess Tigers University and is still being used there.

The overwhelmingly positive comments of my students encouraged me to rework this programme in the form of a series of books. In doing so, I was able to make use of many evaluations, corrections and suggestions from my students. While I was redrafting, especially the explanations in the solutions, that feedback from my students was very valuable.

This book is the third volume in a series of manuals designed for players who are building the foundations of their chess knowledge. The reader will receive the necessary basic knowledge in six areas of the game – tactics, positional play, strategy, the calculation of variations, the opening and the endgame.

The reader will benefit from the methodical build-up in this book, even if some of the material is familiar, as it will close any possible gaps in his chess knowledge and thus construct solid foundations for future success. To make the book entertaining and varied, I have mixed up these different areas, but you can always see from the header to which area any particular chapter belongs.

At this point I must emphasize that just working with this book does not guarantee a rise in your rating. It simply gives you a solid basis for a leap forward in chess ability. You should also play in tournaments, analyse your own games, play through well-annotated games of stronger players and read books on chess.

I have also been concerned with another problem area since I moved to Germany: the role of trainers in chess education. In Germany there are unfortunately too few qualified trainers. There is also a widespread opinion that a talented chess player does not need a trainer. I do not share that opinion. I believe that many talented German chess players could develop much further, if they had support at the correct time and if they had not left gaps in their learning.

Chess is a complicated sport, which has to be studied for many years. It is hard to imagine any other sport without coaches. (Is there a single athletics club or football club that does not have a trainer?) This manual is intended for the many club players who unfortunately receive no support in attempting to master our complicated sport. In this way it is intended as a substitute for a trainer for those that have none (and a support for trainers), but not an equal replacement for a trainer.

I further believe that many chess lovers, who show great commitment to working with young players in chess clubs, will gain with this series of books (as well as with the programme of the

Chess Tigers University) important methodological support and high quality training material for their chess lessons. The students will certainly profit from the supplementary explanations given by trainers and from lively discussions about the themes in the books.

How to work with this book

First read through the lessons. **You absolutely must play through all the examples and all the variations on a chessboard.**

First think about every diagram position (for at least 5 minutes) and try to find the solutions on your own. On average, you will need 1 to 2 hours per lesson. However, there is no time limit; some students may need more time for specific lessons.

It is important to have a good understanding of the subject.

The second part of the lesson is a test with 12 positions. The stars near the number of each exercise indicate the level of difficulty and, at the same time, the maximum number of points which you can earn for the correct solution with all necessary variations ($\star = 1$ point). Try to solve the positions without moving the pieces! If you cannot solve the position straight away, you must try for a second time for approximately 10 minutes. This time you may move the pieces. You must look for new ideas.

On absolutely no account may you get help from a computer!

Normally you will also need 1 to 2 hours for each test. Try to solve all the exercises. Consider each position as though it were appearing in one of your own games and look for the best possible continuation. You do not always have to mate or win quickly. It is sometimes enough to suggest a good move. Especially in the lessons on the opening, it is more important for you to reflect on the position, take a decision and then carefully play through the solutions. This will help you better understand the ideas of the opening. Mistakes are part of the learning process!

It is very important to write down all the necessary variations. If you do this you will be able to compare your solution with the one given in the book and you can also see how well you have understood the particular subject. If your score is too low, we recommend that you work through the chapter again. **We also recommend that you play through the solutions, including all the variations, on a chessboard.**

You will find an explanation of the standard chess symbols used in this book on page 4.

At this point I should like to express my gratitude to a large number of people who have supported my work in various ways. There is firstly my wife Nadja for the design of the German edition book and her help in working through the solutions, my daughter Katja for many corrections to my German, my chess trainer Mark Dvoretsky, from whose training methods I have learned so much, the Chess Tigers and Hans-Walter Schmitt for their constructive and productive cooperation, Mike Rosa for correcting some mistakes, Reinhold from Schwerin for his proofreading, and finally to Semen Oxman and Oleg Aizman, who gave valuable advice concerning the design of the book.

I would also like to thank Augusto Caruso for his elaboration of Nadja's design for the English edition and Ian Adams for translating the book.

Combinations involving bishops

In this chapter we shall consider combinations in which a bishop plays an important part. We previously became acquainted with many examples on this theme in the lesson ‘Combinations involving diagonals’ (*Boost Your Chess 1*, Chapter 15). The bishop naturally requires open diagonals in order to be able to work effectively, and the support of the other pieces and pawns is often required to force open a diagonal for the bishop.

Diagram 1-1

J.Zukertort – J.Blackburne

London 1883

In one of the most beautiful games in the history of chess, Zukertort sacrifices his queen in order to bring the bishop into play.

1. $\mathbb{W}b4!! \mathbb{B}8c5$

If 1... $\mathbb{W}g7$ then simply 2. $\mathbb{E}g3$ wins for White.

1... $\mathbb{W}g5$ is also met by 2. $\mathbb{E}g3+-$.

If Black takes the white queen, he will be mated:
1... $\mathbb{W}xb4$ 2. $\mathbb{Q}xe5\#$ $\mathbb{Q}xh7$ 3. $\mathbb{E}h3\#$ $\mathbb{Q}g6$ 4. $\mathbb{E}g3\#$ $\mathbb{Q}h6$
5. $\mathbb{E}f6\#$ $\mathbb{Q}h5$ (or 5... $\mathbb{Q}h7$ 6. $\mathbb{E}f7\#$ $\mathbb{Q}h6$ 7. $\mathbb{E}f4\#$ $\mathbb{Q}h5$
8. $\mathbb{E}h7\#$) 6. $\mathbb{E}f5\#$ $\mathbb{Q}h6$ 7. $\mathbb{E}f4\#$ $\mathbb{Q}h7$ 8. $\mathbb{E}h5\#$ The excellent coordination of the white rooks with the bishop is impressive.

Diagram 1-2

2. $\mathbb{E}f8\#!!$

The rook is also ready to sacrifice itself for the greater glory of the bishop!

The less spectacular 2. $\mathbb{W}xe4$ also leads to a win:
2... $\mathbb{E}xb2$ 3. $\mathbb{E}f8\#$ $\mathbb{W}xf8$ 4. $\mathbb{W}xe5\#$ $\mathbb{Q}xh7$ (4... $\mathbb{W}g7$
5. $\mathbb{W}e8\#$ $\mathbb{Q}xh7$ 6. $\mathbb{E}h3\#$ $\mathbb{W}h6$ 7. $\mathbb{W}f7\#$ $\mathbb{Q}h8$ 8. $\mathbb{E}xh6\#$)
5. $\mathbb{W}h5\#$ $\mathbb{Q}g7$ (5... $\mathbb{W}h6$ 6. $\mathbb{W}f7\#+-$) 6. $\mathbb{W}g5\#$ $\mathbb{Q}f7$
7. $\mathbb{W}f5\#$ $\mathbb{Q}g8$ 8. $\mathbb{W}g6\#$ $\mathbb{Q}h8$ 9. $\mathbb{E}h3\#+-$
2... $\mathbb{Q}xh7$

Black declines the second sacrifice as well. 2... $\mathbb{W}xf8$ would be met by 3. $\mathbb{Q}xe5\#$ $\mathbb{Q}xh7$ 4. $\mathbb{W}xe4\#$ $\mathbb{Q}h6$ 5. $\mathbb{E}h3\#$ $\mathbb{Q}g5$ 6. $\mathbb{E}g3\#+-$.

3. $\mathbb{W}xe4\#$ $\mathbb{Q}g7$ 4. $\mathbb{Q}xe5\#$

Combinations involving bishops

4. $\mathbb{B}g8\#$ $\mathbb{Q}xg8$ 5. $\mathbb{W}g6\#$ $\mathbb{W}g7$ 6. $\mathbb{W}e8\#$ $\mathbb{W}f8$ 7. $\mathbb{B}g3\#$
would also lead to a speedy victory.

4... $\mathbb{Q}xf8$

White now wins with a discovered attack involving the bishop; this final combination appeared as Diagram 7-5 of *Build Up Your Chess 1*.

5. $\mathbb{B}g7\#!$ $\mathbb{Q}g8$

5... $\mathbb{W}xg7$ 6. $\mathbb{W}e8\#$

6. $\mathbb{W}xe7$

1-0

Diagram 1-3

H.Hecht – R.Keene

Brunnen 1966

White wants to open the long diagonal for his bishop with a knight sacrifice; but the combination he played only works if Black accepts the sacrifice.

1. $\mathbb{Q}d7?$

It is sensible for White to activate his a1-rook by doubling on the d-file, but he must go about it the right way. 1. $\mathbb{R}d2$ $\mathbb{W}e7$ 2. $\mathbb{R}ad1$ gives White a clear advantage, but 1. $\mathbb{R}d3?!$ $\mathbb{Q}fe4$ is only equal.

However, White has an even stronger option:
 1. $\mathbb{Q}g4!$ $\mathbb{Q}xg4$ 2. $\mathbb{W}xg4$ $\mathbb{W}c6$ (or 2... $e5$ 3. $\mathbb{W}h4$ $\mathbb{Q}g7$)
 4. $\mathbb{W}h7\#$ $\mathbb{Q}f6$ 5. $\mathbb{B}e1$ $\mathbb{W}c6$ 6. $\mathbb{Q}e4\#$ $\mathbb{Q}xe4$ 7. $\mathbb{B}xe4\#$ –
 3. $\mathbb{B}d5!$ $exd5$ 4. $\mathbb{W}h4$ $\mathbb{Q}xf2\#$ 5. $\mathbb{Q}xf2$ $\mathbb{W}c5\#$ 6. $\mathbb{Q}d4\#$ –

1... $\mathbb{W}xd7?$

White was probably hoping for 1... $\mathbb{Q}xd7?$ 2. $\mathbb{W}h5!!$ $gxh5$ (2... $\mathbb{Q}f6$ 3. $\mathbb{Q}xf6\#$ –) 3. $\mathbb{Q}h7\#$ (Blackburne's mate).

2. $\mathbb{Q}xf6$ $\mathbb{W}c6$

Black has obtained dangerous counterplay on the long diagonal.

3. $\mathbb{B}d5?!$ $exd5?$

Underestimating White's attack. Black has much better defensive options here:

a) 3... $\mathbb{Q}f5?!$ 4. $\mathbb{Q}xf5$ $exf5\#$

b) 3... $\mathbb{Q}e8!?$ 4. $\mathbb{Q}c3$ $exd5!$ 5. $\mathbb{W}h5!$ $\mathbb{Q}f6!$ 6. $\mathbb{Q}xf6$ $\mathbb{Q}xf2\#$!
 7. $\mathbb{Q}f1$ (Black also wins after both 7. $\mathbb{Q}xf2$ $\mathbb{W}xf6\#$ and
 7. $\mathbb{Q}g2$ $dxc4\#$ 8. $\mathbb{Q}e4$ $\mathbb{W}xe4\#$ 9. $\mathbb{Q}xe4$ $\mathbb{Q}xe4\#$ 10. $\mathbb{Q}xf2$
 $gxh5$) 7... $\mathbb{W}xc4\#$ White is defenceless.

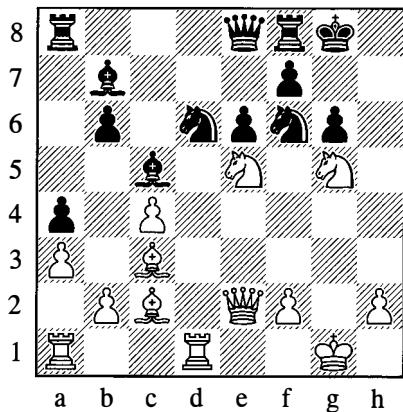

Diagram 1-4

4. $\mathbb{W}h5!!$

Now this typical sacrifice works.

Combinations involving bishops

1... $\mathbb{W}xe8$ 2. $\mathbb{Q}xf6\# \mathbb{W}e7$

Or 2... $\mathbb{Q}d7$ 3. $\mathbb{W}d5\#.$

3. $\mathbb{W}d5\#!$

1-0

Next is another typical tactical motif, which makes use of the position of the bishop on the long diagonal.

Diagram 1-8

G.Levenfish – B.Goldenov

USSR Ch, Leningrad 1947

1. $\mathbb{B}xb7!$

1. $\mathbb{B}xb7??$ $\mathbb{B}xb7$ 2. $\mathbb{B}xb7$ would be a blunder, because of 2... $\mathbb{W}d5+-.$

1... $\mathbb{B}xb7$ 2. $\mathbb{B}xb7$ $\mathbb{Q}d7$ 3. $\mathbb{B}xa8$ $\mathbb{W}xa8$ 4. $\mathbb{Q}f3\pm$

White has won a pawn, although 4... $\mathbb{W}c6$ (threatening ... $\mathbb{W}a6$) would offer Black a certain amount of compensation.

The next four positions illustrate various motifs. Try to find the solutions yourself. The bishop has an important role to play in each; it is often ready to sacrifice itself. And you do not always have to deliver mate!

Diagram 1-9

L.Shamkovich – G.Borisenko

USSR Ch, Kiev 1954

1. $\mathbb{W}xh7\#$

The immediate 1. $\mathbb{Q}c7!+-$ is equally good, and will transpose to the following note.

1... $\mathbb{Q}f8$ 2. $\mathbb{B}fe1?!$

2. $\mathbb{Q}c7!+-$ is simpler, in view of 2... $\mathbb{W}e7$ 3. $\mathbb{W}h8\#.$

2... $\mathbb{B}xe1\#$ 3. $\mathbb{B}xe1$ $\mathbb{Q}e6$ 4. $\mathbb{B}e5$ $\mathbb{B}f5$ 5. $\mathbb{Q}xe6\#$ $\mathbb{B}xe6$

6. $\mathbb{W}h8\#$

6. $\mathbb{B}g7\#$! $\mathbb{Q}e7$ 7. $\mathbb{W}xg6+-$ is quite convincing.

6... $\mathbb{B}e7$ 7. $\mathbb{W}g7\#$ $\mathbb{Q}e8$ 8. $\mathbb{W}xg6\#?!$

The more circumspect 8. $\mathbb{B}g3$ should still be enough to win.

8... $\mathbb{Q}d7$ 9. $\mathbb{B}f4??$

This completes a surprising reversal of fortunes.

9... $\mathbb{B}xf4$ 10. $\mathbb{W}xe6\#$ $\mathbb{Q}c7$ 11. $\mathbb{B}c1\#$

Probably White had overlooked that 11. $\mathbb{W}e5\#$ is

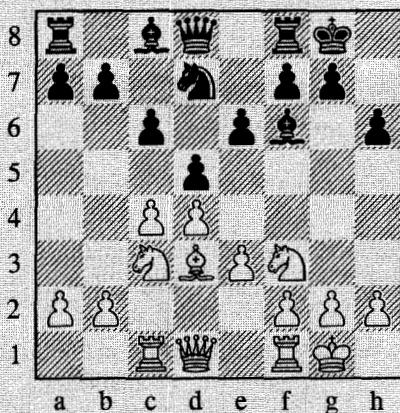

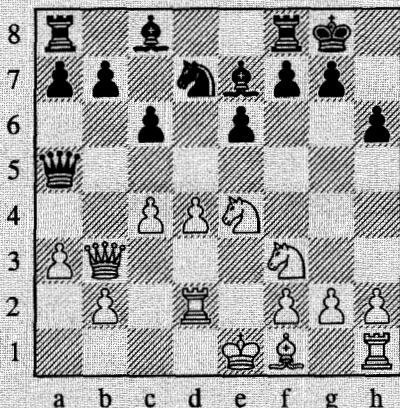

Diagram 2-2

Diagonals

Just as rooks need open files, so bishops require open diagonals in order to take an active part in affairs. However, it is not always easy to find jobs for both of our bishops. If, for example, we have a lot of pawns on the light squares, then our dark-squared bishop will cooperate very well with them but the light-squared bishop will tend to be a problem. Black often has this type of difficulty in the Queen's Gambit. The bishop being a valuable piece, some attempt must be made to bring it into the game. So in the Queen's Gambit various plans have been developed for Black which involve the opening of a diagonal for the light-squared bishop.

Theoretical variation

1.d4 $\mathbb{Q}f6$ 2.c4 e6 3. $\mathbb{Q}c3$ d5 4. $\mathbb{Q}g5$ $\mathbb{Q}e7$ 5.e3 h6 6. $\mathbb{Q}xf6$ $\mathbb{Q}xf6$ 7. $\mathbb{Q}f3$ 0-0 8. $\mathbb{E}c1$ c6 9. $\mathbb{Q}d3$ $\mathbb{Q}d7$ 10.0-0

Diagram 2-1

This is a well-known theoretical position. White is ready to take measures in the centre with e3-e4. First and foremost, Black must bring his light-squared bishop into play.

10... $\mathbb{d}xc4$ 11. $\mathbb{Q}xc4$ e5

A typical operation. Not only does the bishop on f6 become somewhat more active, but the bishop on c8 gets an open diagonal for its development.

12.h3 $\mathbb{d}xd4$ 13. $\mathbb{d}xd4$ $\mathbb{Q}b6$ 14. $\mathbb{Q}b3$ $\mathbb{E}e8$ 15. $\mathbb{E}e1$ $\mathbb{Q}f5=$

The light-squared bishop is actively posted on f5, and Black solves his opening problems.

On the whole there tend to be fewer problems with a fianchettoed bishop. But sometimes its scope may be limited by pawns, either our own or the opponent's. In that case we have to try to open the long diagonal so as to activate the bishop.

Diagram 2-4

M.Euwe – M.Goldstein

Weston 1926

Although the black bishop on h7 has an open diagonal, it has nothing to aim at. Meanwhile the white bishop on the long diagonal is restricted by the black barrier c6-b7. White opens the diagonal with a typical pawn thrust.

1.b5! $\mathbb{cxb}5$ 2. $\mathbb{cxb}5 \mathbb{W}c7?$

Black would do better to play 2...b6 here, as he will have to play it soon anyway.

On other diagonals too, the bishop often turns out to be a key piece. If we manage to open a diagonal for the bishop and to support its activity with our other forces, the opponent's situation may become difficult.

Diagram 2-6

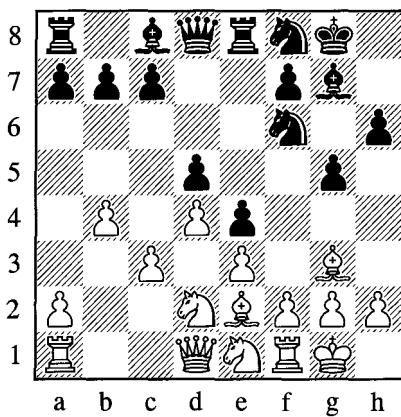

Diagram 2-6

G.Kamsky – J.Nunn

Belgrade 1991

White's strategy is based on the bishop on g3. It is protecting the kingside and at the same time doing useful work on the h2-b8 diagonal.

1. $\mathbb{E}c1$

In such positions it is important to support the bishop with one or more of the other pieces. White prepares c3-c4, after which the rook and bishop will both be exerting pressure on c7.

The immediate 1.c4 was not bad either.

1... $\mathbb{Q}g6$

Black aims to get counterplay with ...g4 followed by ...h5-h4.

2. c4 c6 3. b5

3. cxd5?! would be a little more accurate, intending to advance with b4-b5 only if Black recaptures on d5 with the knight.

3... cxb5?! 4. cxb5 $\mathbb{E}e7$ 5. $\mathbb{Q}c2$ g4!

Black counters on the kingside, threatening ...h5-h4. White prepares a rescue operation for his g3-bishop.

6. $\mathbb{Q}b4$ h5 7. $\mathbb{W}c2$

Now the bishop will be able to go to c7.

7... $\mathbb{Q}e6$!?

7... $\mathbb{Q}e8$? is correct, and after 8. $\mathbb{W}c5$ $\mathbb{Q}e6$ the game is unclear

8. $\mathbb{Q}c7$! $\mathbb{W}d7$ 9. b6 $\mathbb{Q}e8$!?

Black would do better to play 9... axb6 10. $\mathbb{Q}xb6$ h4 11. $\mathbb{W}c5$ $\mathbb{Q}f5\infty$.

Diagram 2-7

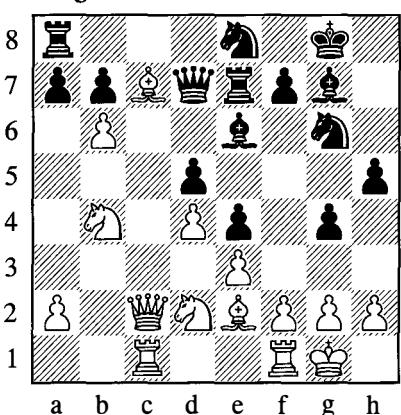

Diagram 2-7

10. $\mathbb{W}c5$

White wants to activate his light-squared bishop too; the threat is 11. $\mathbb{Q}b5$.

10... $\mathbb{Q}xc7$ 11. bxc7 $\mathbb{E}c8$ 12. $\mathbb{W}xa7$

White can initiate some tactics: 12. $\mathbb{Q}b5$ $\mathbb{Q}xc7$! (less good is 12... $\mathbb{W}xc7$ 13. $\mathbb{Q}xd5$ $\mathbb{Q}xd5$ 14. $\mathbb{W}xd5$ $\mathbb{W}xc1$

Diagonals

15. $\mathbb{B}xc1$ $\mathbb{B}xc1\#$ 16. $\mathbb{Q}f1\pm$) 13. $\mathbb{Q}xd7$ $\mathbb{B}xc5$ 14. $\mathbb{B}xc5$ $\mathbb{B}xd7$ Black has reasonable compensation for the exchange.

12... $\mathbb{B}xc7$ 13. $\mathbb{W}b6$ $\mathbb{Q}h4$

13... $h4!?\pm$ might be a better attempt to obtain counterplay.

14. $\mathbb{Q}b3$ $\mathbb{Q}f5$ 15. $\mathbb{Q}c5$

White had a clear positional advantage, which he successfully converted into victory.

Of course, sometimes the bishop has to be developed to a relatively passive position. This may be necessary because we need to develop the rooks, and the best way to do that is to connect them. However, occasionally the a1-rook (or more rarely the h1-rook) can be brought into play without moving the bishop from c1 (or f1).

A.Yusupov – Xie Jun

 $\mathbb{W}d6$ 6. $\mathbb{Q}a3$ b5 7.c3 c5 8. $\mathbb{Q}c2$ f6

Diagram 2-8

9.a4

White can develop his bishop after moving his d-pawn, but it would take some time for his a1-rook to get into the game. Instead White opens the a-file for a possible exchange of rooks, and thus develops his queenside more quickly.

9... $\mathbb{Q}b7$ 10. $\mathbb{A}xb5$ $\mathbb{Q}xe4$

10... $axb5$ would be followed by 11. $\mathbb{Q}xa8\#$ $\mathbb{Q}xa8$ 12.d4 $\mathbb{Q}xe4$ 13. $\mathbb{Q}e1$ with a dangerous initiative for White.

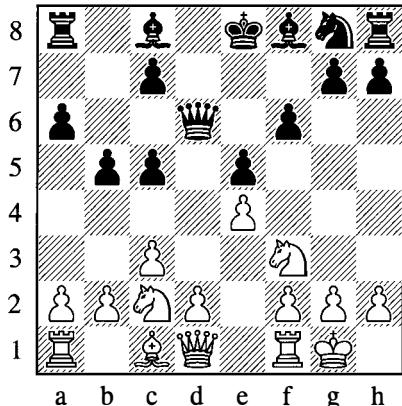

11.d4

White has a promising attack.

Here are a few useful guidelines, which can be very helpful in some (but not all!) situations.

1) **If a bishop is developed outside its own pawn chain, then pawns placed on the same-coloured squares as that bishop will not hamper the other bishop either.** So we can have both bishops in active posts. White follows this sort of strategy in, for example, the Torre Attack.

Diagram 2-8

Strategy 1

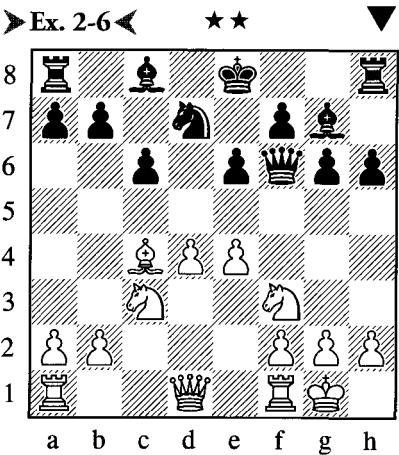

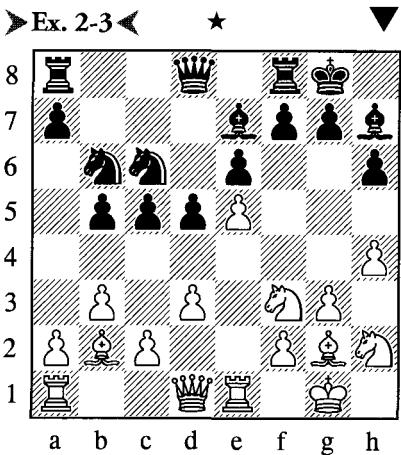

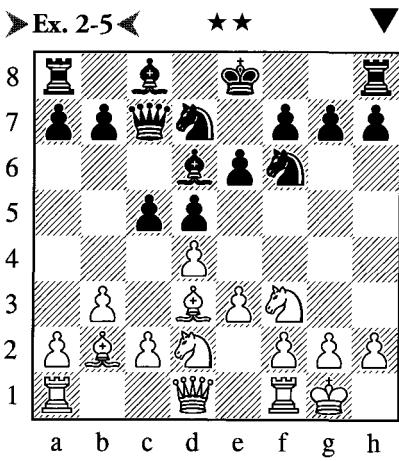

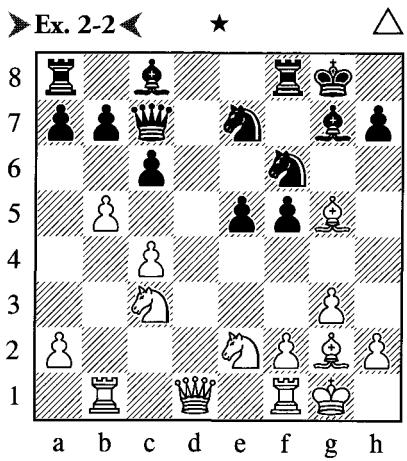

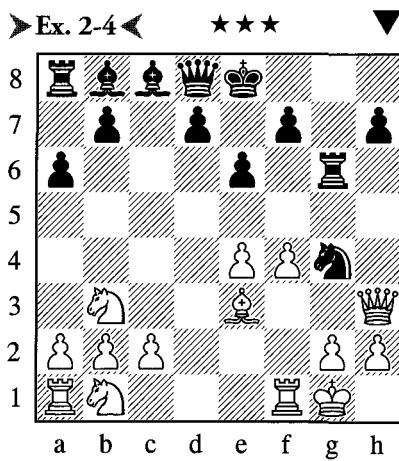

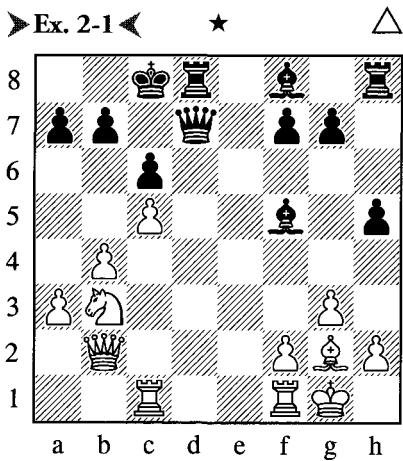

2) If a **bishop** is exchanged for a **knight**, you should try to place your **pawns** on the same-coloured squares as the **bishop** that has been exchanged (Capablanca's rule). This will help avoid any weakness on these squares, and also free the other bishop.

3) There are two contrasting strategies for combating an opposing bishop:

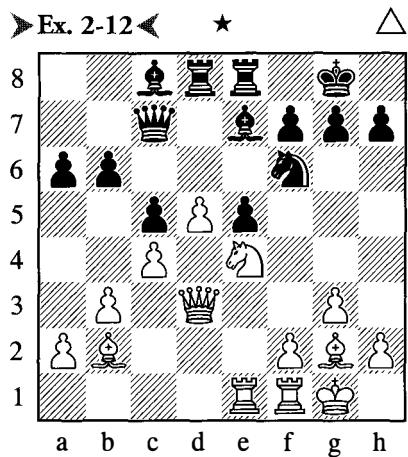

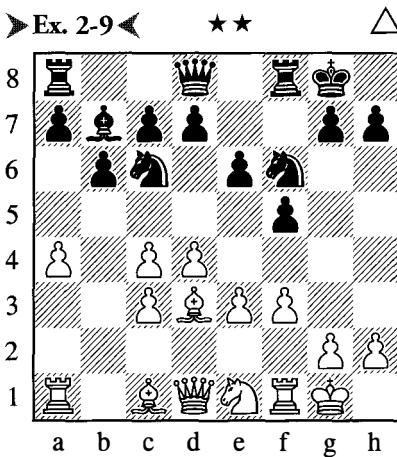

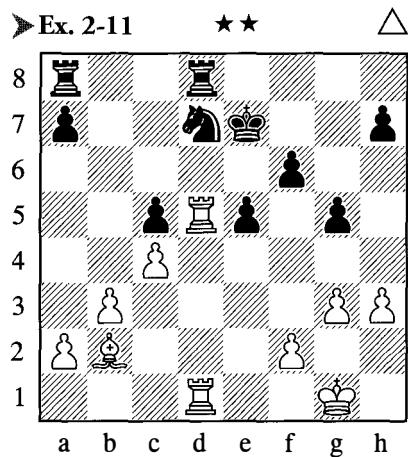

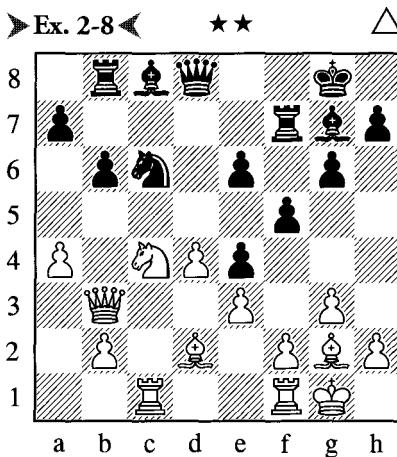

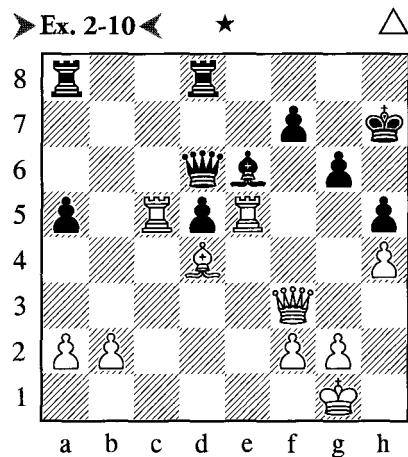

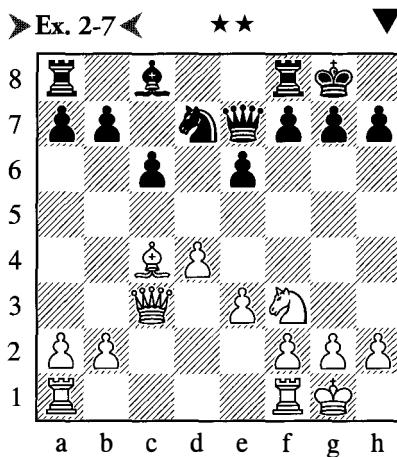

a) **Post your pawns on opposite-coloured squares to the bishop.** This is very effective in the endgame, but it is sometimes a disadvantage in the middlegame, as the opponent is allowed to control a lot of squares and can use them to penetrate with his pieces.

b) **Set up a barrier of pawns on squares of the same colour as the bishop.** This is often good in the middlegame, but care has to be taken in the endgame to ensure that the bishop cannot attack your pawn chain from the rear.

Queen sacrifices

In this chapter we shall study combinations in which the strongest piece is sacrificed. Such queen sacrifices are relatively rare, because it takes extremely well-coordinated pieces to be able to mount a mating attack without the queen. If we are contemplating a queen sacrifice, we have to check the variations very carefully. We must try to make the play as forcing as possible, in order to prevent the opposing queen from successfully leading a counter-attack. We should be aware that although the queen is very strong, it does not show itself at its best in defence; to a certain extent this is because it is so valuable.

2... $\mathbb{Q}xc3!$

All of Black's pieces are attacking. To speed up his attack along the long diagonal, Black sacrifices his queen.

3. $\mathbb{Q}xh4$

White cannot really decline the sacrifice:

a) 3. $\mathbb{Q}xc3 \mathbb{Q}xe4\#$ 4. $\mathbb{Q}xe4 \mathbb{Q}xh2\#$
b) 3. $\mathbb{Q}xb7 \mathbb{Q}xg3$ 4. $\mathbb{Q}f3$ (4. $\mathbb{Q}f3 \mathbb{Q}xh2+$) 4... $\mathbb{Q}xf3$

Very interesting situations can arise when in return for the sacrificed queen a player obtains some material compensation (often a rook plus a minor piece), along with an attack on the opposing king. This attack can sometimes be combined with threats against the opposing queen.

Diagram 4-1**Realizing a material advantage in a pawn ending**

“In pawn endings one extra pawn is sufficient for a win, apart from some rare exceptions. It is not especially difficult to realize such an advantage in material.” – Averbakh

In the following example we shall examine the standard plan of **winning by deflection**.

Diagram 4-1**M.Euwe – A.Olland**

Amsterdam (10) 1922

1.c4

White has an advantage in material on the queenside. Therefore it is logical that he will create a passed pawn there.

1... $\mathbb{Q}e7$ 2. $\mathbb{Q}e3$

1) “Before creating a passed pawn, it is usually a good idea to improve the position of one’s king.” – Averbakh

The white king advances into the centre, in order to prevent counterplay by the opposing king and to support its own pawns.

2... $\mathbb{Q}e6$ 3. $\mathbb{Q}e4$ a5 4.b3

White does not have to hurry. Pay attention to how Euwe advances his pawns. Instead 4.a3?! a4 would have allowed a blockade on the queenside.

4... $\mathbb{Q}d6$ 5. $\mathbb{Q}d4$ b6 6.a3

2) “One has to create a passed pawn and then queen it.” – Averbakh

Counterplay on the kingside is easily thwarted, since Black does not have a pawn majority there.

6...h5 7.b4 g5

6...axb4 7.axb4 g5 8.c5† bxc5† 9.bxc5† $\mathbb{Q}c6$ would be slightly more resilient, but White nevertheless wins: 10. $\mathbb{Q}e5!$ $\mathbb{Q}xc5$ 11. $\mathbb{Q}f5$ g4 12. $\mathbb{Q}g5$ $\mathbb{Q}d4$ 13. $\mathbb{Q}xh5+$ –

3) “If the opposing king manages to stop the pawn, the stronger side’s king makes use of the deflection

that has occurred in order to break through towards the opposing pawns and gain a decisive advantage in material." – Averbakh

15.♝b6 ♜b8 16.♝xa5

1–0

If the pawns are not totally fixed, the stronger side can make use of another winning plan: playing for zugzwang and thus putting the opposing king in a 'semi-stalemate' situation.

Diagram 4-3

1.b6!

The plan with deflection does not win here, because the black king can reach the saving f8-square in time: 1.♝d5 ♜b6 2.♝e5? (White can return with 2.♝c4 and still win as in the main line) 2...♜xb5 3.♝f5 ♜c6 4.♝xg5 ♜d7 5.♝xh4 ♜e7 6.♝g5 ♜f8= 1...♜b8 2.♝c6 ♜c8 3.b7† ♜b8 4.♝b6

This is the 'semi-stalemate' method. Black now has to surrender his g-pawn.

4...g4 5.hxg4 h3 6.♝c6+–

12. $\mathbb{Q}h8$ $\mathbb{Q}f8$ 13.h7 $\mathbb{Q}f7$ stalemate!

We shall take a look at another two important theoretical positions.

Various rules have been formulated for **positions with fixed rook's pawns and an extra pawn on the other wing**, but I find that it can be difficult to remember these rules. The following example simply gives a few useful pointers, which are helpful in coming to a quick evaluation.

Diagram 4-5

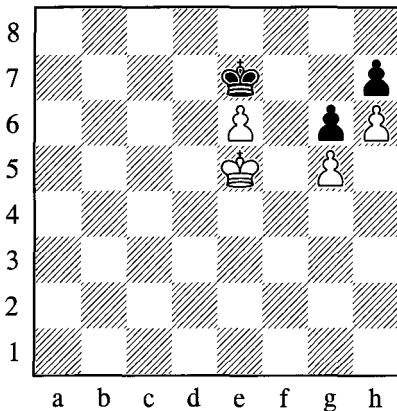

Diagram 4-6

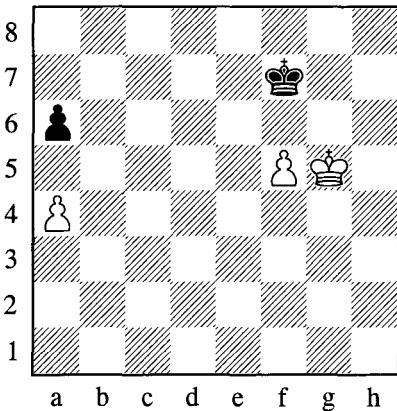

Diagram 4-6

M.Dvoretsky

2002

In order to win, White has to capture the black pawn without letting the opposing king reach the c8-square.

1.a5!

Some important guidelines:

1) If the stronger side's rook's pawn has reached the opponent's half of the board, the position is always won.

2) For the defending side, it is important to advance

Realizing a material advantage in a pawn ending

his rook pawn as far as possible. (If it were Black's move, 1...a5 would be sufficient to draw.)

3) In a standard situation (pawns on a4 and a5), it is better for the stronger side not to advance his passed pawn too far. Otherwise, whenever he surrenders that pawn, the opposing king can get to c8 (or c1) more quickly.

1.♔g7 2.♕f4 ♕f6 3.♕e4 ♕f7 4.♕d5 ♕f6 5.♕c6 ♕xf5 6.♕b6 ♕e6 7.♕xa6 ♕d7 8.♕b7+–

The white king prevents the opposing king from going to the saving square c8.

The ending with g- and h-pawns against h-pawn

Diagram 4-7

Theoretical position

1.h3

Because the black pawn is ideally placed on h7, the only way White can try to win is to seize the h6-square for his king. But to do this he has to move his h-pawn too soon. Subsequently he will no longer have the choice between a single or double move with his h-pawn, and so will be unable to put his opponent in zugzwang: 1.h4 ♔h8! (or 1...♕f8) 2.♕h6 (2.♕f6 ♕g8 3.♕e7 ♕g7 4.♕e6 ♕g8 5.♕f6 ♕f8 6.g5 ♕g8 7.h5 h6=) 2...♕g8 (see the rule about colours below) 3.g5 ♕h8 4.h5 ♕g8=

If White tries 1.♕h5 then Black can draw by an exchange of pawns: 1...h6! 2.♕h4 ♕g6 3.♕g3 h5!= 1...♕g8!

Black must choose the correct square!

2.♕h6 ♕h8

For the defender here, there is a **rule about colours:**

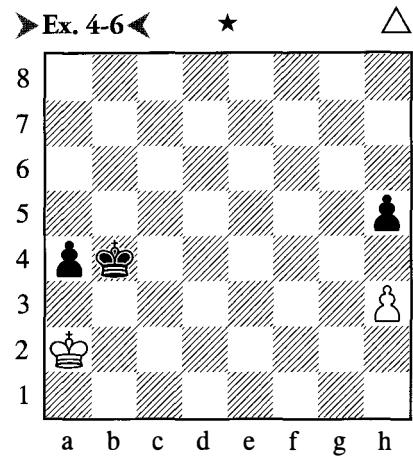

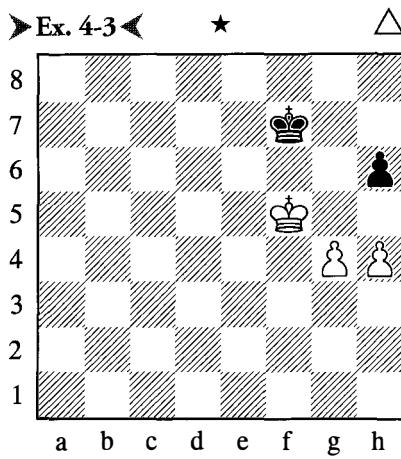

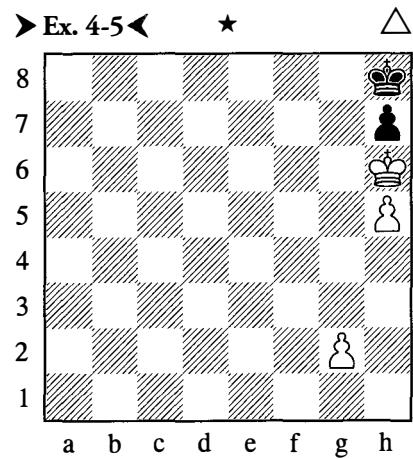

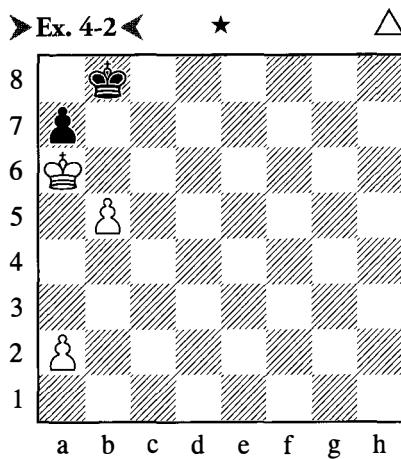

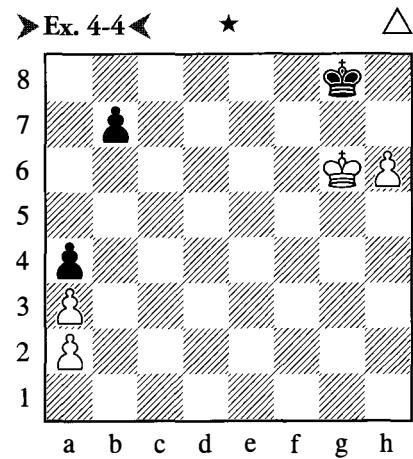

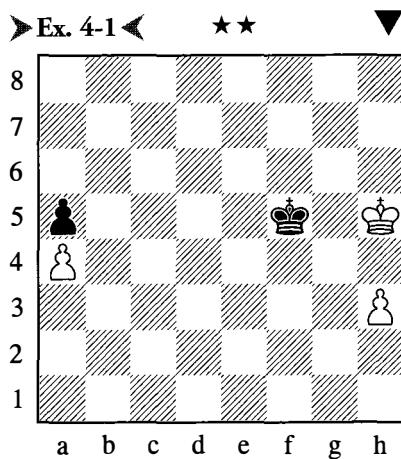

If the connected pawns are on squares of different colours, then the kings (after the white king gets to h6) must also be on squares of different colour (that is, Black must be able to answer ♔h6 with ...♕g8). But if the pawns are on squares of the same colour, the kings must also be on squares of the same colour (Black must be able to answer ♔h6 with ...h8).

- ✓ Two methods
- ✓ How to force an exchange of pieces
- ✓ Combining both methods

Realizing a material advantage

This important practical theme was already dealt with in Chapter 13 of *Build Up Your Chess 1*. The side with a material advantage has at its disposal two different methods of converting it.

We can **play for an attack** with the justified hope that we can make our extra forces count.

The second method is used more often. If we **simplify the position** (exchange pieces), then we can normally realize our material advantage more easily. However, less experienced players often make the typical mistake of simply chasing the opponent's pieces about, in the vague hope that the opponent will tire and allow the exchange of pieces. It is much better to **put your pieces in active positions**. Then the opponent will be the one trying to exchange off these active pieces.

In some cases both methods can be combined: the threat of an attack can force the desired simplification of the position. Or an exchange may be offered, and if the opponent declines this exchange and moves his piece away, then an attack becomes possible.

We shall look at some practical examples.

German Ch, Altenkirchen 2005

1... $\mathbb{Q}e4?$

This move allows White to occupy the important e5-square, and leads to the loss of a pawn.

1... $\mathbb{Q}g4!$ is correct. Then after 2.e4 $\mathbb{W}f6$ 3. $\mathbb{Q}g2$ dxe4 4. $\mathbb{Q}xe4$ $\mathbb{E}ad8$ Black obtains counterplay.

2. $\mathbb{Q}xe4$ dxe4 3. $\mathbb{Q}e5$ $\mathbb{E}ac8$ 4. $\mathbb{E}c1$ $\mathbb{Q}g7$ 5. $\mathbb{W}xe4!$

It is correct to take the central pawn. 5. $\mathbb{Q}xc6!$ would give Black more chances. For example: 5... $\mathbb{W}d6$ 6. $\mathbb{Q}e5$ $\mathbb{E}xc3$ 7. $\mathbb{W}xc3$ $\mathbb{E}c8$ 8. $\mathbb{W}e1$ $\mathbb{E}xc1$ 9. $\mathbb{W}xc1$ f6 10. $\mathbb{Q}c4$ $\mathbb{W}c7$ Black has good play for the pawn.

5... $c5$ 6. $\mathbb{W}f4$ cxb4

6...f6 7. $\mathbb{Q}d3$ $\mathbb{W}d7$ would not be good: 8.bxc5 (or 8.dxc5 $\mathbb{W}d5$ 9.f3 $\mathbb{W}xf3$ 10.c6 $\mathbb{W}xf4$ 11. $\mathbb{Q}xf4+-$)

7.axb4 a5 8. $\mathbb{B}xc8?$!

The exchange of rooks results in serious technical problems for White, since Black can obtain dangerous counterplay on the long diagonal.

The best option is perhaps 8.bxa5!? bxa5 9. $\mathbb{Q}d3$ $\mathbb{B}xc3$ 10. $\mathbb{B}xc3$ followed by $\mathbb{Q}c5$, with advantage to White.

White could also consider 8.b5 $\mathbb{B}xc3$ 9. $\mathbb{B}xc3$, although 9...a4 10. $\mathbb{Q}c6$ $\mathbb{W}d7$ offers Black some counterplay.

8... $\mathbb{B}xc8$ 9. $\mathbb{B}xc8$ $\mathbb{B}xc8$ 10.bxa5

After 10. $\mathbb{Q}c6$ $\mathbb{W}e6$ 11. $\mathbb{W}c7$ a4 Black's passed pawn is dangerous.

Here White saw that the planned 12. $\mathbb{Q}xa5$ is followed by 12... $\mathbb{W}b1\#$ 13. $\mathbb{Q}h2$ $\mathbb{Q}f5$ with the annoying threat of ... $\mathbb{Q}e4$. If White is forced to play f2-f3, then his king will inevitably be exposed to perpetual check. So White changed his plans and aimed for play against the opposing king.

12... $\mathbb{W}b1\#$ 13. $\mathbb{Q}h2$

The rest of the game was heavily influenced by time trouble.

13... $\mathbb{W}f1?$

Black should have played 13... $\mathbb{Q}f5!$. For example: 14. $\mathbb{W}e5\#$ (14.g4 $\mathbb{Q}e4$ 15.f3 $\mathbb{W}a2\#$ 16. $\mathbb{Q}g3$ $\mathbb{W}a1=$) 14... $\mathbb{Q}h7$ 15. $\mathbb{W}e7$ $\mathbb{Q}e4$ 16. $\mathbb{W}xf7\#$ $\mathbb{Q}h8$ 17.f3 (17. $\mathbb{W}f6\#$ $\mathbb{Q}h7$ 18. $\mathbb{W}e7\#$ $\mathbb{Q}h6=$) 17... $\mathbb{W}c2\#$ 18. $\mathbb{Q}h3$ $\mathbb{W}f2!=$ Black forces a draw.

White quickly obtains an advantageous endgame. His bishop on the long diagonal exerts strong pressure on b7.

1. $\mathbb{Q}xb6!$ $\mathbb{C}xb6$

$1\dots axb6$ $2.\mathbb{W}xd8$ $\mathbb{E}xd8$ $3.\mathbb{E}fd1$ is quite similar to the game. For example: $3\dots \mathbb{Q}f5$ ($3\dots \mathbb{E}e8?$ $4.\mathbb{Q}d5+-$) $4.\mathbb{Q}xb7$ $\mathbb{Q}xc2?$ ($4\dots \mathbb{E}ab8\pm$) $5.\mathbb{Q}xa8$ $\mathbb{Q}xd1$ $6.\mathbb{Q}f3+-$

2. $\mathbb{W}xd8$ $\mathbb{E}xd8$ $3.\mathbb{E}ad1$ $\mathbb{Q}f5$

Black surrenders his b7-pawn. $3\dots \mathbb{E}e8?$ would be even worse for Black after $4.\mathbb{Q}b5$.

4. $\mathbb{Q}xb7\pm$ $\mathbb{E}ab8$ $5.e4$

White consolidates his position.

5. $\mathbb{E}d7$

$5\dots \mathbb{E}xd1$ $6.\mathbb{E}xd1$ $\mathbb{E}xb7$ $7.exf5$ $gxf5?$ loses to $8.\mathbb{E}d8\pm$ $\mathbb{E}f8$ $9.\mathbb{Q}a3$.

It is clear that Black has not obtained sufficient compensation. White wants to swap off some pieces in order to avoid possible counterplay.

9... $\mathbb{E}bd8$ 10. $\mathbb{E}xd7$ $\mathbb{E}xd7$ 11. $\mathbb{Q}d5$ $\mathbb{Q}xd5$ 12. $\mathbb{Q}xd5$

The simplest, as the bishop is very well placed on d5. I prefer this to taking with the pawn: $12.\mathbb{E}xd5$ $\mathbb{Q}f5$ $13.\mathbb{Q}xe5$ $\mathbb{Q}xe5$ $14.\mathbb{Q}xc2$ $15.f4\pm$

12... $\mathbb{E}c7$ 13. $c4$ $\mathbb{Q}f8$ 14. $f3$

17... $\mathbb{Q}e8$ 18. $\mathbb{Q}b7$

Attacking with queen and knight

The queen and the knight have very different capabilities. From the same square they attack completely different sets of squares. For that reason they complement each other wonderfully well. It is very simple to coordinate their efforts; indeed it often happens automatically when we attack a particular square with both pieces. These pieces are particularly dangerous when they are attacking, although the nimble knight must first make its way to a good position close to the opposing king. The fine coordination of queen and knight often makes this duo stronger than a queen and bishop.

Diagram 6-1**Diagram 6-2 (analysis)**

In this instructive example, even World Champion Vladimir Kramnik was surprised by how strongly the tandem of queen and knight worked together.

Diagram 6-1

V.Kramnik – P.Leko

World Ch (8), Brissago 2004

Kramnik's team had prepared this line, hoping that the passed pawn would give him the advantage. The computer appeared to support this view, but it was not given enough time on the position. With more time, its assessment changes in Black's favour.

Kramnik now had a long think, and played:

1.♘f2

The move that White would like to play is 1.a7, in order to promote the pawn as quickly possible, but after 1...♛e3† 2.♗g2 Black has a decisive combination: 2...♞xf3†!! 3.♗xf3 ♛e2† 4.♗g1 ♜g4+

Diagram 6-2

White is unable to hold out against the well-coordinated attacking pieces. For example: 5.a8♛† ♜g7 6.♗xc6 ♛f2† 7.♗h1 ♛f1† 8.♗g1 ♛f2#

1...♞xf3! 2.♗xf3

White still cannot push the a-pawn: 2.a7 ♛e2† 3.♗g1 ♛g2#

Attacking with queen and knight

2...Qe4†

Leko plays the conclusion of the game with great accuracy.

3.Qe1

3.Qg2 Qe2†+

3...Qxc3!

4.bxc3 Qxc3† 5.Qf2 Qxa1 6.a7 h6! 7.h4 g4

0-1

The following game illustrates some typical attacking ideas.

R.Vaganian – A.Yusupov

Istanbul Olympiad 2000

1.Qf3 d5 2.g3 c6 3.Qg2 Qg4 4.c4 e6 5.cxd5

This variation is a speciality of several Armenian players. White plans to take action in the centre later by playing d2-d3 and eventually e2-e4.

5...exd5 6.Qb3

Diagram 6-3

A relatively new try. White wants to entice the black queen to b6, then show that it is worse there than on d8. The main line is 6.0–0 Qf6 7.d3 Qe7.

6...Qb6 7.Qc2 Qf6 8.0-0 Qe7 9.d3 Qbd7?

Black prepares a good defensive idea against e2-e4.

10.Qc3

If 10.e4, then Black replies 10...Qc5! 11.Qe2 (11.Qc3?? d4+) 11...dxe4 12.dxe4 Qh5 with equality.

Diagram 6-4

10...Qxf3!

This is the only way that Black can prevent his opponent taking control of matters in the centre with e2-e4.

After the immediate 10...d4? 11.Qa4, the defence of the d4-pawn is a problem. For example: 11...Qb4 12.a3 Qd6 13.Qf4 Qd5 14.Qxd4! Qxd4? 15.e3+–

11.Qxf3 d4 12.Qb1

12.Qe4 Qxe4 13.dxe4 does not give Black any difficulties.

12...h5?

Since the centre remains closed, Black feels justified

Diagram 6-3

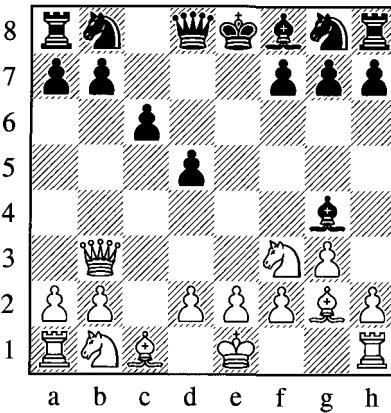

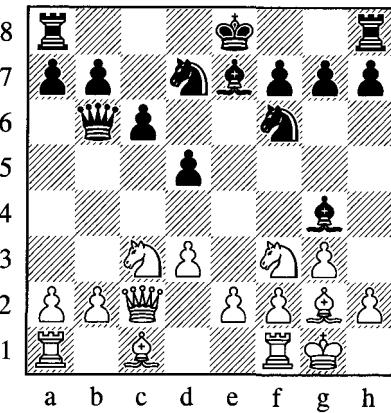

Diagram 6-4

Tactics 3

in trying to take the initiative on the kingside. However, 12... $\mathbb{Q}e5!$ first would be a bit more accurate.

13. $\mathbb{Q}d2$

Here White should play 13. $\mathbb{Q}f4?$ in order to control the e5-square.

13... $\mathbb{Q}e5$ 14. $\mathbb{Q}g2$ h4 15. $\mathbb{Q}c4?$

15. $\mathbb{Q}f3$ $\mathbb{Q}xf3\#$ 16.exf3 would be safer, with approximate equality.

15... $\mathbb{Q}xc4$ 16. $\mathbb{W}xc4$

Diagram 6-5

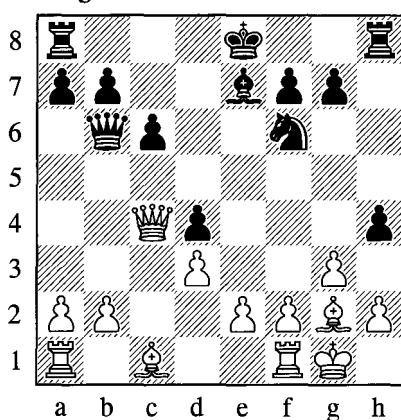

Diagram 6-5

Diagram 6-5

16... $\mathbb{Q}g4!$

The knight is well placed here, and is ready to support the attack.

17.b4!

Vaganian fights for the initiative. If Black takes the pawn, then White will obtain dangerous play on the b-file.

17.h3 $\mathbb{Q}e5$ 18. $\mathbb{W}c2$ hxg3 19.fxg3 would be slightly better for Black.

17... $\mathbb{E}d8!$

Defending the d4-pawn, and thereby freeing the black queen to head to the kingside.

18. $\mathbb{Q}d2$ $\mathbb{W}c7$ 19.b5 c5 20.b6?

White underestimates his opponent's attack.

20.h3 is an improvement, although after 20... $\mathbb{Q}e5$ 21. $\mathbb{W}a4$ b6 22.g4 0–0 the weakness of the f4-square gives Black an edge.

20...axb6 21. $\mathbb{W}b5\#$

The decisive mistake. By going away from the c4-square, the queen takes the pressure off the f7-pawn.

21. $\mathbb{E}ab1$ would be correct, so as to be able to meet 21...hxg3 with 22.fxg3. Rather than exchanging pawns, Black would reply 21... $\mathbb{Q}f8!$ and retain attacking chances.

21... $\mathbb{Q}f8$ 22. $\mathbb{E}ab1$ hxg3

Black can now take on g3 without any worries.

23.hxg3

23.fxg3? is simply met by 23... $\mathbb{Q}xh2-$.

23... $\mathbb{Q}e5$

Bringing the queen even closer to the white king, and preparing a typical combination.

24. $\mathbb{E}fe1$

24. $\mathbb{W}xb6$ is the obvious try.

Diagram 6-6

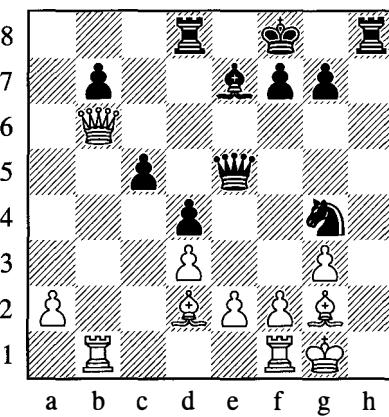

Diagram 6-6 (analysis)

Attacking with queen and knight

Diagram 6-7

But then comes: 24... $\mathbb{Q}h1\#$! 25. $\mathbb{Q}xh1$ (25. $\mathbb{Q}xh1$ $\mathbb{W}h5\#$) 25... $\mathbb{W}h5$ 26. $\mathbb{Q}g2$ $\mathbb{W}h2\#$
 27. $\mathbb{Q}f3$ $\mathbb{Q}e5\#$ 28. $\mathbb{Q}e4$ $\mathbb{W}h5\#$ 29. $\mathbb{Q}be1$ (or 29. $\mathbb{W}xb7$
 $\mathbb{W}g4\#$ 30.f4 $\mathbb{W}xe2\#$ 31. $\mathbb{Q}f5$ $g6\#$) 29... $\mathbb{Q}d7$ Black has
 a decisive attack.

24... $\mathbb{Q}h2!$

Here we can see another typical attacking idea:
 Black regroups his major pieces and puts his rook in
 front of the queen.

24... $\mathbb{W}f5$ also wins, but the text is even stronger.

25.e4

25. $\mathbb{W}xb6$ $\mathbb{W}h5$ 26. $\mathbb{W}xb7$ allows a quick finish:

Diagram 6-7

26... $\mathbb{Q}h1\#$ 27. $\mathbb{Q}xh1$ $\mathbb{W}h2\#$ 28. $\mathbb{Q}f1$ $\mathbb{W}xf2\#$

25... $\mathbb{W}h5$ 26. $\mathbb{Q}f1$

Diagram 6-8

26... $\mathbb{Q}xg2!$

Black gets a decisive attack since White will no
 longer be able to defend the light squares.

27. $\mathbb{Q}xg2$ $\mathbb{W}h2\#$ 28. $\mathbb{Q}f3$ $\mathbb{Q}e5\#$!

The finish would be 29. $\mathbb{Q}e2$ $\mathbb{W}h5\#$! 30. $\mathbb{Q}f1$ $\mathbb{W}h1\#$
 31. $\mathbb{Q}e2$ $\mathbb{W}f3\#$ 32. $\mathbb{Q}f1$ $\mathbb{Q}g4$ and White no longer has
 any sensible defence.

0-1

Finally we take a look at an interesting combination
 by Keres.

Diagram 6-9

P.Keres – S.Gligoric

Zürich 1959

1. $\mathbb{Q}xd3!$

This is much more convincing than: 1. $\mathbb{Q}h6\#$ $\mathbb{Q}h8$
 2. $\mathbb{Q}f7\#$ $\mathbb{Q}xf7$ 3. $\mathbb{W}xf7$ $\mathbb{Q}f8$ 4. $\mathbb{W}e7$ $\mathbb{W}c5$ 5. $\mathbb{W}xc5$ $\mathbb{Q}7xc5\#$
 Black can still put up some resistance.

1... $\mathbb{Q}xd3$ 2. $\mathbb{Q}b3\#$ $\mathbb{Q}h8$ 3. $\mathbb{Q}xf6!!$

Removing the defence of the g5-square allows the
 other knight to enter the attack.

3... $\mathbb{Q}xf6$ 4. $\mathbb{Q}g5!$

Black must now lose his queen or be mated.

4... $\mathbb{Q}xf2\#$ 5. $\mathbb{Q}g1$

This is even better than 5. $\mathbb{Q}xf2$, although that also
 wins: 5... $\mathbb{W}c5\#$ (5... $\mathbb{W}b6\#$ 6. $\mathbb{Q}g3$ $\mathbb{W}e3\#$ 7. $\mathbb{Q}h2$ $\mathbb{W}f4\#$

The open games

In this chapter we shall consider some typical situations arising from open games, in which White mounts an attack on the f7-square (or Black attacks the f2-square). As you already know, you have to be particularly careful in open positions; the pieces may easily reach very active positions, and it can be difficult to recover if you fall behind in development. For that reason, the main motto in the open games is: **rapid mobilization!**

It is also very important to get your king into safety. Every budding chess player who has had some bitter experiences with Scholar's Mate knows how unpleasant an attack on the sensitive f2- or f7-squares can be. In the starting position these squares are protected only by the king, and so are not sufficiently well defended. The simplest way to defend these important points is by castling kingside. But sometimes we underestimate the danger, or we may not yet be ready to castle. If White places his bishop on c4, then his opponent must take particular care!

Here are some examples, taken from various openings, which demonstrate the dangers that may threaten f7 (or f2), and which also show how to defend against these threats.

Philidor Defence

1.e4 e5 2.♘f3 d6 3.♗c4 ♘f6?

Black underestimates the danger of being attacked on f7 for a second time.

Black should prefer 3...♝e7 4.d4 (or 4.c3 ♘f6 5.♗b3 0-0 6.♗g5 ♜e8=) and now:

a) 4...♝d7? is not good:

Diagram 7-1

5.dxe5! ♘xe5 (5...dxe5 6.♗d5!+) 6.♗xe5 dxe5 7.♗h5 and White wins a pawn.

b) The correct way for Black to play is 4...exd4! followed by ...♝f6 and ...0-0.

Diagram 7-1 (analysis)

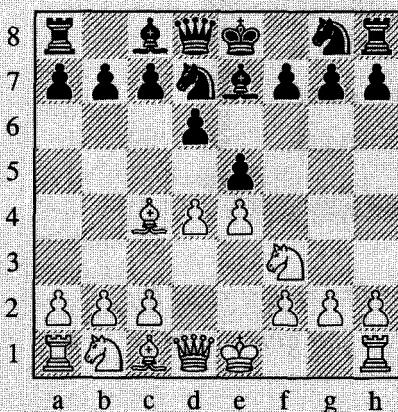

Diagram 7-2

4.♕g5! d5!

The only sensible option.

5.exd5 ♕d6

5...♕xd5?! is simply met by 6.♗f3 ♗xg5 7.♕xd5± with a double attack on f7 and b7.

6.d3

White has a clear advantage.

Scotch Gambit

1.e4 e5 2.♘f3 ♘c6 3.d4 exd4 4.c3 dxc3

4...d5 is a safer variation.

5.♘c4 ♘e7?!

5...d6 is better, and Black can successfully defend the f7-pawn:

a) After 6.♕g5 Black can even play 6...cxb2!.

b) 6.♕xc3 ♘f6 7.♗b3 (7.♕g5 is met by 7...♘e5!)

7...♗d7 8.♕g5 ♘e5

Diagram 7-3

6.♗d5!

Now it is not so easy for Black to protect f7.

6...♘h6 7.♕xh6 0–0! 8.♕xg7

Less good is: 8.♘c1 ♘b4! 9.♗d1 (9.♗h5 ♘c2† 10.♗e2 ♘xa1 11.♗xc3 ♘c2 12.h4 d5†) 9...c2†

However, White has a reasonable alternative in 8.♗xc3?! gxh6 9.0–0 d6 10.♗h5 with a dangerous attack.

8...♗xg7 9.♗xc3±

The black king is very exposed.

Black has good compensation for the sacrificed pawn.

Giuoco Piano

1.e4 e5 2.Qf3 Qc6 3.Qc4 Qc5 4.c3 Qf6 5.d3

5.d4 exd4 6.cxd4 Qb4† is the old main line.

5...a6 6.0-0 Qa7 7.Qb3 d6 8.Qbd2 0-0 9.Qe1

9.Qc4 is a safer alternative. White may then continue with Qe3, either straight away or after first exchanging dark-squared bishop with Qe3.

Another idea is 9.h3 h6 10.Qe1. Black can now play 10...Qh5 (planning ...Qf4 and ...Qf6), since 11.Qxe5? is met by 11...Qxe5 (or 11...Qh4!?) 12.Qxh5 Qxd3.

Diagram 7-5

9...Qg4!?

White can easily parry the attack on f2, but that is not Black's only idea.

10.Qe2 Qh8!

Black is preparing ...f5.

11.h3 Qh6

After 11...Qxf2? 12.Qxf2 Black gets only rook and pawn for two minor pieces, which is not quite enough.

12.Qf1 f5

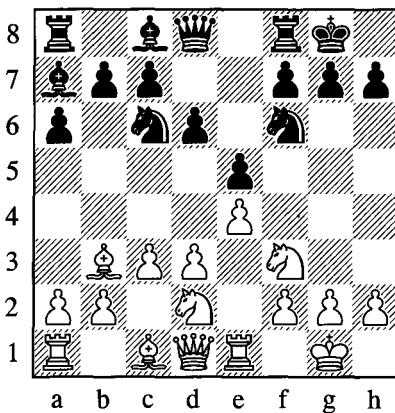

Play has become very sharp.

13.Qxh6!?

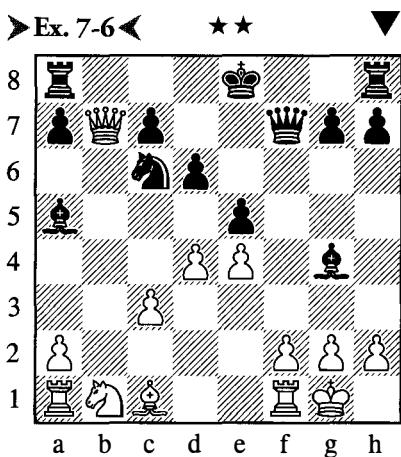

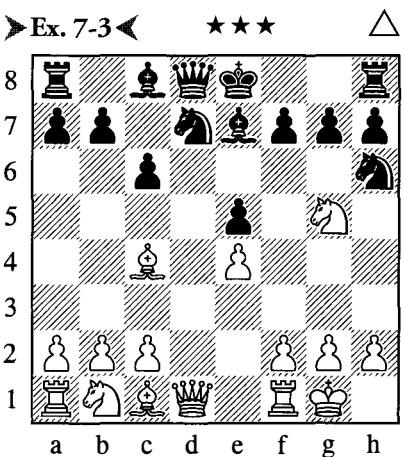

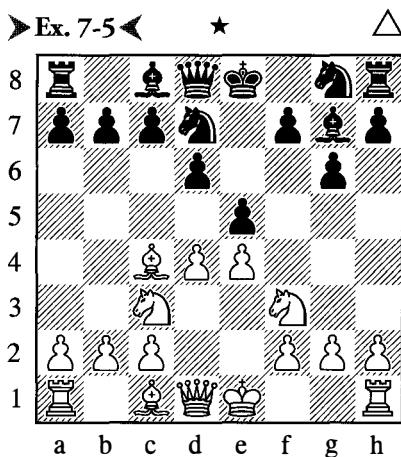

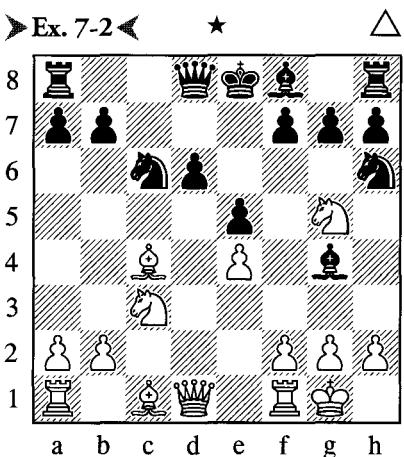

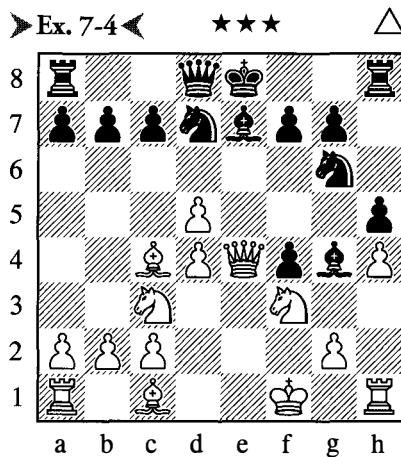

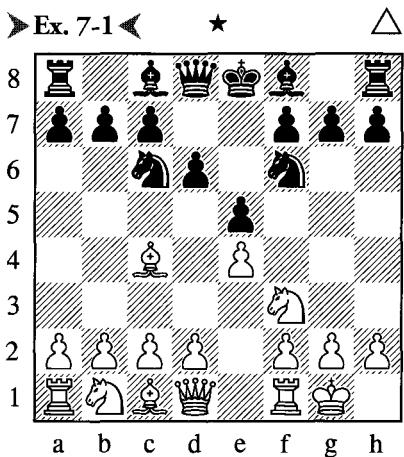

White should probably prefer 13.d4∞.

13...gxh6 14.exf5 Qxf5

Black obtains a dangerous initiative on the king-side. He has the bishop pair along with some open lines against the white king. In practice, Black has scored well from this position.

Attacking with queen and rook

It is relatively easy to coordinate a queen and a rook. We saw some examples of this in ‘Mating motifs’ (*Build Up Your Chess 1*, Chapter 1). A rook is excellent at giving the queen the required support. The queen and rook can either form a battery or attack the king along parallel lines. Although the major pieces can be dangerous at a distance, it is often important to bring the queen near to the opposing king, so as to deprive it of possible escape squares.

In this chapter we shall deal with various forms of cooperation between the major pieces. The situation of the defending side becomes particularly delicate when his king does not have a pawn shield in front of it. It is then that the major pieces display all their power, and are often able to outwit a numerically superior army and mate the opposing king.

In the following examples, the attacking side profits from weaknesses in the opponent’s castled position.

Diagram 8-1

M.Wahls – A.Yusupov

Black has an advantage on the kingside. He needs an open file to effectively utilize his major pieces.

1...h3!

Black’s breakthrough is based on an interesting criss-cross motif.

2.gxh3 $\mathbb{Q}h7!!$

It will later become clear why the queen must remain on the b1-h7 diagonal.

3. $\mathbb{Q}g2$

3. $\mathbb{Q}xg3$ is met by 3... $\mathbb{Q}xh3!-$.

Diagram 8-2

This cross-pin leads to rapid success: 4. $\mathbb{Q}ff3$ $\mathbb{Q}h5$ 5. $\mathbb{Q}xg7$ $\mathbb{Q}h1\uparrow$ 6. $\mathbb{Q}f2$ $\mathbb{Q}h2\uparrow$ 7. $\mathbb{Q}g3$ $\mathbb{Q}g2\#$

3... $\mathbb{Q}h5$ 4. $\mathbb{Q}xg3$

If 4. $\mathbb{Q}h1$, then 4... $\mathbb{Q}c2\uparrow!$ (only possible due to 2... $\mathbb{Q}h7$) 5. $\mathbb{Q}g1$ g2 6. $\mathbb{Q}h2$ $\mathbb{Q}d1\uparrow$ and Black wins.

Attacking with queen and rook

4... $\mathbb{E}xh3$

Once more Black makes use of the criss-cross motif.

5. $\mathbb{E}xg7$

5. $\mathbb{E}f3$ is no better: 5... $\mathbb{E}h2\#$ 6. $\mathbb{Q}g1$ (or 6. $\mathbb{Q}f1$ $\mathbb{W}b1\#$ 7. $\mathbb{W}e1$ $\mathbb{E}h1\#$) 6... $\mathbb{E}h1\#$ 7. $\mathbb{Q}f2$ $\mathbb{W}h2\#$

8... $\mathbb{W}h2\#$ 9. $\mathbb{Q}g4$ $\mathbb{W}h5\#$ 10. $\mathbb{Q}g3$ $\mathbb{W}h3\#$

The only way for Black to fight on is: 3... $\mathbb{E}e7!$
 4. $\mathbb{E}xe7$ $\mathbb{Q}xe7$ 5. $\mathbb{W}xd7$ $\mathbb{W}xd7$ 6. $\mathbb{E}xd7$ $\mathbb{E}f1\#$ 7. $\mathbb{E}d1$
 Black has 'succeeded' in reaching a highly unpleasant ending.

4. $\mathbb{W}g5\#??$ would be wrong, on account of 4... $\mathbb{Q}h8!-+$; the white pawn on h7 gets in the way of the attack and simply protects the opposing king.

Forced Variations

Whenever we are calculating variations, we should first consider those which force our opponent into a specific reaction. Forced variations lie at the heart of the calculation of variations. Moreover, they are easier to calculate and give us more security.

In every position we must first look for the **active moves**: checks, captures, mating threats or attacks on opposing pieces. It is these moves which have the highest level of priority. Checks are especially useful since the opponent has only a limited number of replies. It is often possible to totally determine the future course of the game if the opponent is given only a single possible reply.

The following sample games show the importance of forced variations in practical play.

P.Tregubov – A.Yusupov

France 2005

1.d4 $\mathbb{Q}f6$ 2. $\mathbb{Q}f3$ e6 3.c4 d5 4. $\mathbb{Q}c3$ c5 5.cxd5 $\mathbb{Q}xd5$

Diagram 9-1

Diagram 9-1

17.exd5!

17.e5 is less accurate, on account of 17... $\mathbb{Q}c4$
 18. $\mathbb{W}f4$ $\mathbb{Q}b2$.

17... $\mathbb{W}d6$

17... $\mathbb{W}f6?$ 18. $\mathbb{Q}g5$ is good for White, in view of
 18...h6 19. $\mathbb{Q}h7\pm$.

18. $\mathbb{R}e5!$

An interesting idea. The rook is transferred to the kingside to support the attack.

Here 18. $\mathbb{Q}g5$ is not so good, as Black can reply 18...h6.

18... $\mathbb{R}ae8$ 19. $\mathbb{Q}h5$ h6 20.h3

A useful move, controlling the g4-square (which becomes important if Black brings his bishop to c8), and giving the king an escape square.

20... $\mathbb{Q}c8$ 21. $\mathbb{Q}d4$ $\mathbb{Q}d7$ 22. $\mathbb{Q}b1!$ $\mathbb{R}e7?$

A decisive mistake.

22... $\mathbb{Q}a4?$ is also wrong: 23. $\mathbb{Q}f5$ $\mathbb{W}f6$ 24. $\mathbb{B}c1$ $\mathbb{B}c8$ 25. $\mathbb{Q}xh6\uparrow!$ $gxh6$ 26. $\mathbb{B}xh6$ $\mathbb{B}xc1\uparrow$ 27. $\mathbb{W}xc1$ $\mathbb{W}d4$ 28. $\mathbb{Q}h7\uparrow$ $\mathbb{Q}h8$ 29. $\mathbb{Q}c2\uparrow$ $\mathbb{Q}g8$ 30. $\mathbb{Q}xa4+$

Black would do better to play 22... $\mathbb{B}e5$. If White continues 23. $\mathbb{W}d3$ then 23... $f5$ is unclear.

23. $\mathbb{W}d3$ $\mathbb{g}6$

23... $f5$ 24. $\mathbb{Q}xf5$ $\mathbb{Q}xf5$ 25. $\mathbb{B}xf5$ is clearly better for White.

24. $\mathbb{B}xh6$

Diagram 9-2

24... $\mathbb{W}xd5$

Black's original intention had been to play 24... $\mathbb{W}f4$ and now:

a) 25. $\mathbb{B}xg6\uparrow??$ $fxg6$ 26. $\mathbb{W}xg6\uparrow$ $\mathbb{B}g7+$ shows the reasoning behind Black's 22nd move.

b) 25. $d6!$ is the move that Black did not spot in time. Black is in trouble: 25... $\mathbb{W}xd6$ 26. $\mathbb{Q}f5!$ $\mathbb{W}xd3$ 27. $\mathbb{Q}xe7\uparrow$ $\mathbb{Q}g7$ 28. $\mathbb{B}xd3$ $\mathbb{Q}xh6$ 29. $\mathbb{B}xd7+$

25. $\mathbb{W}g3!$ $\mathbb{B}fe8$

25... $\mathbb{W}e5$ 26. $\mathbb{W}h4$ $\mathbb{B}fe8$ is no better: 27. $\mathbb{Q}xg6!$ $fxg6$ 28. $\mathbb{B}xg6\uparrow$ $\mathbb{B}g7$ 29. $\mathbb{Q}f3$ $\mathbb{W}e7$ 30. $\mathbb{B}xg7\uparrow$ $\mathbb{W}xg7$ 31. $\mathbb{B}d5!+$ — The threat of $\mathbb{B}g5$ is decisive.

Diagram 9-3

White now looks for and finds a forced continuation.

26. $\mathbb{Q}xg6!$ $\mathbb{B}e1\uparrow$

At first Black had hoped that he could get away with accepting the sacrifice. But after 26... $fxg6$ 27. $\mathbb{B}xg6\uparrow$ we have:

a) 27... $\mathbb{Q}h7$ 28. $\mathbb{B}g5+$ —

b) 27... $\mathbb{Q}f7$ 28. $\mathbb{B}g5$ $\mathbb{W}e4$ 29. $\mathbb{B}g7\uparrow$ $\mathbb{Q}f8$ 30. $\mathbb{B}g8\uparrow$ $\mathbb{Q}f7$ 31. $\mathbb{W}g7#$

c) 27... $\mathbb{Q}f8$ 28. $\mathbb{W}f4\uparrow$ There are lots of good options here, but White should be looking for a way of forcing matters, and allowing his opponent only a few replies; the best way of doing this is with checks. (Another strong line is 28. $\mathbb{Q}e6\uparrow$ $\mathbb{Q}xe6$ 29. $\mathbb{W}f4\uparrow$ $\mathbb{B}f7$ 30. $\mathbb{W}h6\uparrow$ $\mathbb{Q}e7$ 31. $\mathbb{B}xd5$ $\mathbb{Q}xd5$ 32. $\mathbb{W}g5\uparrow$ —.) 28... $\mathbb{B}f7$ 29. $\mathbb{W}h6\uparrow$ $\mathbb{Q}e7$ 30. $\mathbb{Q}c6\uparrow!$ $\mathbb{W}xc6$ (30... $\mathbb{Q}xc6$ 31. $\mathbb{B}xd5$ $\mathbb{Q}xd5$ 32. $\mathbb{W}g5\uparrow$ —)

White is playing very solidly in the centre and preparing the dangerous breakthrough f4-f5. For that reason, Black should swap queens here with 15...♕c5.

15...♘c5? 16.f5!

The threat is f5-f6 and the pawn wedge would be very dangerous.

16...exf5 17.♘xd5 ♘xd3†

After 17...♕a7 18.♗f4! (or 18.♗f6†!) White has a winning kingside attack.

18.♖xd3 ♕a5??**Diagram 9-7**

This is a key moment in the game. White correctly believes that he has a decisive advantage (all his forces are already in play and are well-coordinated in the attack), and so he looks for a forced win. Here Aagaard invested a great deal of time in calculating the variations accurately. (You can find extensive annotations regarding this in Aagaard's book, *Excelling at Chess Calculation*.)

19.b4!

Without wasting any time, White gets rid of the threat of ...♕xe1†. White can also win by first playing 19.♗f6†! gxf6 and then 20.b4.

19...♕xa2

Both 19...♕a4? 20.♗b6+– and 19...♕d8? 20.♗f6+– are clearly hopeless for Black

20.♕f6†!

20...gx f6

20...♔h8 is met by 21.♕h3 gx f6 (21...h6 22.♕f4+–) 22.♕h4. Black has no good way of parrying the threat of mate on h7. However, because the move mate threat is less forcing than a check, some care is still required here. The following checks by the opponent absolutely had to be seen and taken into account. 22...♕a1† 23.♔d2 ♕d8† 24.♔e2 ♕xe5† 25.♔f1 The checks run out and White wins.

21.♕g3†

21.♕h4! would be even simpler, since the d3-rook protects the white king from checks. 21...f4 22.exf6 ♔h8 23.♕h6 ♕g8

In the test which follows, please look for active candidate moves: first checks, then threats of mate, captures of pieces, and attacks on pieces. In the subsequent moves too, you really must continue to be active and attack. The very first variations to examine are the forcing ones, which do not leave your opponent any choice. It can happen that you find yourself on the correct road and then do not have to look for an alternative. You only need to find one solution. But you should calculate out that solution very precisely.

Ex. 9-1

F.Vallejo Pons – I.Sokolov

Bundesliga 2005

1... $\mathbb{Q}f3\#$

The immediate 1... $\mathbb{Q}g3$ (also 1 point) wins easily too:

a) 2.fxg3 $\mathbb{Q}xg3\#$ 3. $\mathbb{Q}e2 \mathbb{W}g2\#$

b) 2. $\mathbb{E}c1$ $\mathbb{Q}xh1$ is hopeless for White.

2. $\mathbb{Q}e2$ $\mathbb{Q}g3\#$!

(1 point)

3.fxg3 is met by 3... $\mathbb{W}g2\#$.

Ex. 9-2

A.Graf – R.Dautov

Bundesliga 2005

1... $\mathbb{Q}xe2$

(1 point)

This leads to a series of exchanges.

2. $\mathbb{Q}d4!$

2... $\mathbb{W}xe2$ is strongly met by 2... $\mathbb{Q}d4!$ 3. $\mathbb{W}a6$ $\mathbb{Q}xf3\#$ 4.gxf3 $\mathbb{W}xh3\#$.

(another 1 point for this variation)

2... $\mathbb{W}xe5$ 3. $\mathbb{Q}xc6$ $\mathbb{W}c7?$

(another 1 point)

Both 3... $\mathbb{W}f6$ and 3... $\mathbb{W}e6$ (also 1 point) lead to equality: 4. $\mathbb{W}xe2$ $\mathbb{Q}xc6=$

However, 3... $\mathbb{Q}xc6$ lets White keep an edge:

4. $\mathbb{Q}xc6$ $\mathbb{Q}xf1$ 5. $\mathbb{Q}xf1\pm$

4. $\mathbb{W}xe2$

4. $\mathbb{Q}c1?$ is an interesting try. Then 4... $\mathbb{W}xb6$ 5. $\mathbb{Q}e7\#$ $\mathbb{Q}h8$ 6. $\mathbb{Q}xc8$ $\mathbb{W}e6$ 7. $\mathbb{Q}a7$ would be slightly better for White, so Black should prefer either 4... $\mathbb{Q}ce8!$ or 4... $\mathbb{Q}h7!$ with great complications,

4... $\mathbb{W}xb6$ 5. $\mathbb{Q}e7\#$ $\mathbb{Q}h8$ 6. $\mathbb{Q}xc8$ $\mathbb{Q}xc8$ 7. $\mathbb{W}d2$

$\mathbb{W}e6$

Now 8. $\mathbb{Q}c1$ $\mathbb{Q}xc1\#$ 9. $\mathbb{W}xcl$ $\mathbb{W}e4$ is dead level.

Attacking with queen and bishop

A queen and bishop are quite easy to coordinate. We have already seen a lot of examples which underline the effectiveness of these pieces on diagonals. You can set up a queen and bishop battery in order to support the queen on a diagonal. But sometimes it makes sense to position the bishop in front of the queen, so as to create pawn weaknesses in the castled position, or to attack targets with a less valuable piece. We have frequently seen such batteries leading to sacrifices on h6 (or h3) – see, for example, Diagram 12-5 in *Build Up Your Chess 1*.

However, the flexibility of the queen means that it can also be positioned on an opposite-coloured square to the bishop, in which case the pieces will control a large number of squares between them. Against an insufficiently protected king, a bishop can often provide the queen with the support necessary to execute a mating attack.

Diagram 10-1

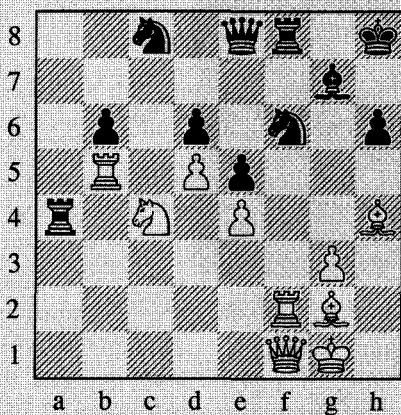

Diagram 10-1

G.Kasparov – I.Smirin

USSR Ch, Moscow 1988

Kasparov begins a complicated attack, which is based on the weakness of the light squares in the opposing camp.

1.♕xf6 ♜xf6 2.♗xf6 ♜xb5 3.♕e6!!

Kasparov is playing for a win.

3.♕f8† only leads to perpetual check after 3...♜xf8 4.♗xf8† ♔h7=. Here 5.♔h3? would be too optimistic: 5...♜c5† 6.♗g2 ♜a2† 7.♔h1 ♜a1† 8.♗f1 ♜c7†

However, 3.♔h3! leads to an advantage for White: 3...♜c5† 4.♗h1 ♜a1 5.♗xf6 6.♗f1 ♜g7 7.♗xc8 b5 8.♗xd6 ♜xd6 9.♗xb5± But the opposite-coloured bishops mean that Black has chances of a draw here.

3...♝g8!

The alternative 3...♝a7 could be considered, so as to protect the f7-square.

On the other hand, 3... $\mathbb{B}xc4?$ would be a mistake:

4. $\mathbb{W}f7$ $\mathbb{W}c5\#$ 5. $\mathbb{Q}h2$ $\mathbb{B}c1$ 6. $\mathbb{B}e8\#$ 7. $\mathbb{W}f5\#$

4. $\mathbb{Q}h3!$

White brings his bishop into the game.

4... $\mathbb{B}xc4?$

Diagram 10-2

In time trouble, Smirin underestimates the following combination, and loses the game.

Again Black could consider 4... $\mathbb{B}a7$, although White retains some pressure.

The slightly odd 4... $h5!?$ may be the best defence.

5. $\mathbb{B}xh6!!+-$

The rook clears the square for the bishop.

5... $\mathbb{Q}xh6$

If 5... $\mathbb{W}c5\#$ 6. $\mathbb{Q}h1$ $\mathbb{B}c1$ then 7. $\mathbb{B}e6\#$.

6. $\mathbb{B}e6\#$ $\mathbb{Q}h8$ 7. $\mathbb{W}f6\#$

Black has no defence against mate: 7... $\mathbb{Q}h7$ (7... $\mathbb{Q}g7$ 8. $\mathbb{W}h4\#$) 8. $\mathbb{W}f7\#$ $\mathbb{Q}g7$ (8... $\mathbb{Q}h8$ 9. $\mathbb{W}g8\#$) 9. $\mathbb{Q}f5\#$ $\mathbb{Q}h8$ (9... $\mathbb{Q}h6$ 10. $\mathbb{W}g6\#$) 10. $\mathbb{W}h5\#$ $\mathbb{Q}g8$ (10... $\mathbb{Q}h6$ 11. $\mathbb{W}xh6\#$ $\mathbb{Q}g8$ 12. $\mathbb{Q}e6\#$) 11. $\mathbb{Q}e6\#$ $\mathbb{Q}f8$ 12. $\mathbb{W}f7\#$

1-0

We shall now look at some more combinations which demonstrate the power of the coordination between queen and bishop.

Diagram 10-3

K.Kopetzky – E.Canal

Vienna 1952

A typical combination lands the white king in a spot of bother.

1... $\mathbb{Q}f3\#$! 2. $\mathbb{g}xf3$ $\mathbb{W}xf3$

Threatening mate on both g2 and h1.

3. $\mathbb{Q}f1$

3. $\mathbb{W}xd5$ $\mathbb{W}xd5$ is also pretty hopeless, in view of the weakened white kingside.

3... $\mathbb{W}h3\#$ 4. $\mathbb{Q}e2$ $\mathbb{Q}c4\#$ 5. $\mathbb{Q}d1$ $\mathbb{W}b3\#$ 6. $\mathbb{Q}c1$ $\mathbb{Q}d3\#$

The queen and bishop pursue the white king on the light squares, once more threatening instant mate.

3.♔g1 ♕h2† 4.♔xf1 ♕xg2#
2...♗xg3 3.♗f3

If 3.♗d2 then 3...♕xh3 4.♗f3 ♕xf3 5.gxf3 ♕d6†
6.♔g1 ♕c5†→.
3.♗e3 is followed by: 3...♕xh3 4.♗xf5 (or 4.♗c4†
♔h7 5.♔d5 ♕h4!→) 4...♕h4 5.♔e6† ♔h7 6.♗f5
♕h5 7.♗xg7 ♕xa5 8.♗xe8 ♕f4→
3...♗xf3 4.gxf3

Diagram 10-6

4...♗g1?

Black is playing beautiful chess, but giving his opponent unnecessary chances.

The simple 4...♕xh3 is better: 5.♔f1 ♕h4 6.♗d5†
♔h7 White cannot survive the attack.

5.♗d2?

Of course not 5.♗xg1?? ♕xh3#.

But White gave up hope too soon! The correct defence is: 5.♔e5!! f4 6.♗d5† ♕f7 (the variation 6...♔h8? 7.♗xg7†! ♕xg7 8.♗xg1+→ demonstrates an important resource for White) 7.♗xf4! ♕xf4
8.♗xg1±

5...♔f2!

Now 6.♔f1 allows 6...♕g1#, and the only other way for White to avoid being mated is to give up his queen.

0-1

Diagram 10-7**I.Balanel – D.Bronstein**

Bucharest 1948

Black can carry out a typical mating attack.

1...d5!

Black opens the a3-f8 diagonal with tempo, so as to bring his bishop to c5.

2.exd5 ♜c5† 3.♗h1 ♜h4! 4.h3 ♜g3!

The threat is 5...♜h2#, and White can only stop it by giving up his queen.

5.hxg4 is of course met by 5...♜h4#.

1.♕xe6! ♜f6

1...fxe6 loses immediately to 2.♗xg6† ♜h8 3.♕h7#.

2.♗e5! c5

2...♝xe5 would be slightly more resilient.

3.♕xh6†!

White lays waste to his opponent's castled position.

3...♝xh6 4.♗xf7†!

Whatever Black does, it is mate next move.

1–0**Diagram 10-9****Engels – Badenstein**

If 3...♜h4 then 4.♝xe7† ♜h8 5.g3 ♜h3 6.f3+–.

4.♝xf6! gxh6

4...♝xf6 is met by 5.♛e4+–, with the double threat of 6.♕h7# and 6.♝xf6†.

Positional advantages

In chess books we often find evaluations along the lines of ‘White is clearly better’ or ‘Black is somewhat better’, although the position is materially level. There are positional advantages which cause us to give preference to one side or the other. However, we must admit that positional advantages are less clear and often less permanent than material advantages. It still requires good play to turn these advantages into either a mating attack or a win based on material. Despite that, in the hands of an experienced player these advantages are of serious importance.

We have already studied various positional elements. The control of the only open file can represent a great advantage. An inferior pawn structure or some weak squares can cause us a headache. The good or the bad bishop, the activity of the pieces, the mobility of the pawns, good or bad coordination of the pieces; these are all important factors in the position.

A positional advantage can be the result of the opponent’s clumsy play, or it may be provoked by pressure being put on his position. Sometimes such an advantage is the result of one or more exchanges – if, for example, we exchange off our opponent’s ‘good’ bishop, he might end up being left with a ‘bad’ bishop.

The following examples will show us how to obtain and how to exploit a positional advantage.

A.Yusupov – C.Jones

Minneapolis 2005

1.d4 e6 2.♘f3 ♘f6 3.e3

I really like playing this quiet variation. White simply develops his pieces, not trying to attack straight away, but aiming to exert pressure on the opposing position at a slightly later stage. (You can learn more about this system in *Build Up Your Chess 3*, Chapter 5.)

3...c5 4.♗d3

Here the bishop is active and controls the e4-square.

4...♝c6 5.0-0

Diagram 11-1**5...b6?!**

This move is not in harmony with 4... $\mathbb{Q}c6$. The light-squared bishop may be well placed on the long diagonal, but the knight on c6 is depriving it of a view! Such details have their part to play, and result in some difficulties for Black.

5...d5 is more logical.

6.c4 $\mathbb{Q}e7$ 7. $\mathbb{Q}c3$

White is already threatening to advance in the centre with d4-d5. Black would rather avoid ...d5, since the a4-e8 diagonal has been weakened by ...b6.

7...0-0 8.d5!±

This gives White an advantage in space.

8... $\mathbb{Q}b4$ 9. $\mathbb{Q}e2$

White certainly doesn't want to exchange his light-squared bishop for the b4-knight, because he considers that knight to be an inferior piece. That will become even clearer after a few more moves.

The other way of avoiding the exchange, 9. $\mathbb{Q}b1$, is also quite promising for White.

9...d6 10.a3 $\mathbb{Q}a6$ 11. $\mathbb{Q}d2$ **Diagram 11-2**

Why is White making another move with his knight, when he still has some undeveloped pieces?

Firstly, in closed positions time plays a lesser role.

Secondly, White is preparing for possible actions by his opponent. After 11...e5 he can play on the kingside with 12.f4. But if his opponent takes on d5, White will recapture with the pawn and obtain the fine c4-square for his knight.

11... $\mathbb{Q}c7$ 12.e4 e5 13.b4

White aims to acquire some more small advantages. He strengthens his position on the queenside and gains the option of opening a file there.

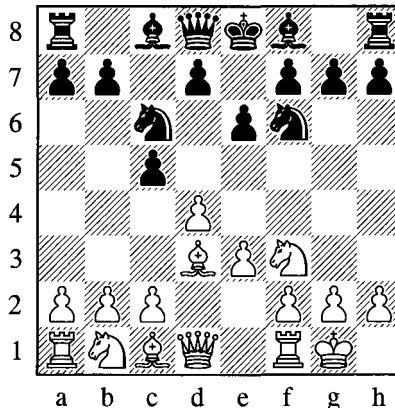

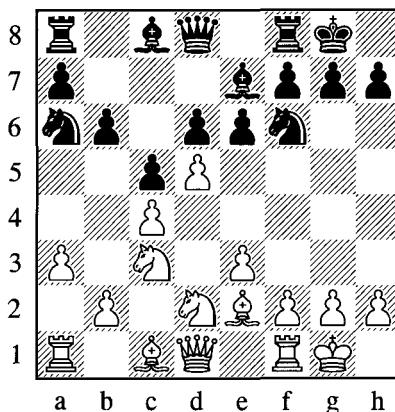

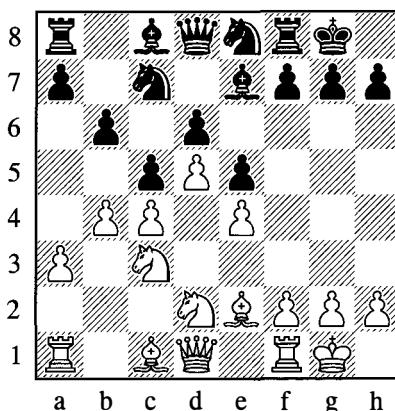

Instead 13.f4? would now concede the excellent e5-square to his opponent: 13...exf4 14. $\mathbb{Q}xf4$ $\mathbb{Q}d7\mp$

13... $\mathbb{Q}fe8$ **Diagram 11-3**

The black pieces have less space, and so Black wants free his game, either with the pawn thrust ...f5, or by playing ... $\mathbb{Q}g5$ to exchange off his passive dark-squared bishop.

14. $\mathbb{Q}g4!$

White prevents ...f5, and moreover exchanges his

Diagram 11-1**Diagram 11-2****Diagram 11-3**

Positional play 2

opponent's more active bishop! This is how to collect pluses in positional play.

Exchanging pawn with 14.bxc5 would be too soon, because Black can reply 14...dxc5 and then bring his passive knight to the good d6-square.

14...♝g5 15.♜b1

White quietly prepares to open the b-file. He slowly strengthens his position, since there is nothing active his opponent can do.

15...g6

Black is now ready to play ...f5, so White exchanges the bishops.

16.♝xc8 ♛xc8 17.bxc5!

The time has come for this exchange too.

17...bxc5

After 17...dxc5? 18.♞f3 ♜xc1 19.♜xc1 White wins the e5-pawn, since 19...f6? allows 20.d6! ♔e6 21.d7.

18.♛a4†

Diagram 11-4

The queen may go to c6 (the consequence of the exchange of bishops!), to prepare the penetration of the rook to b7.

18...a6?

This unnecessarily weakens the b6-square; White will soon penetrate there with his rook.

19.♞f3 ♜xc1 20.♜fxc1 f6!?

Black is playing too passively. The only chance (because his opponent has already accumulated quite a few advantages) lay in active play on the kingside. Black should at least try to divert his opponent from his operations on the queenside by playing 20...f5.

21.♜b6 ♜b8 22.♜cb1 ♜xb6 23.♜xb6

White has control of the b-file.

23...♝f7 24.h3

Useful prophylaxis; White deprives the opposing queen of the g4-square and opens up an escape square for his king.

24...♛d7

Diagram 11-5

25.♛xd7

White goes into the endgame. This was not forced; White could also play 25.♛c6. However, the remaining black pieces are very passively placed, and furthermore an exchange of queens reduces the danger of being hit by a counter-attack on the kingside.

Diagram 11-4

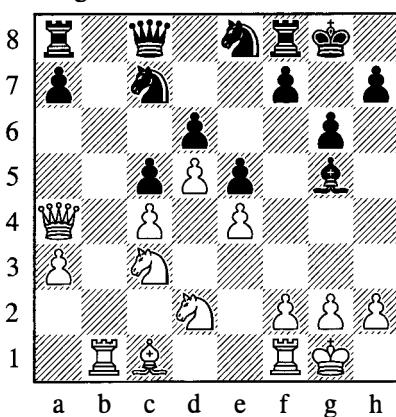

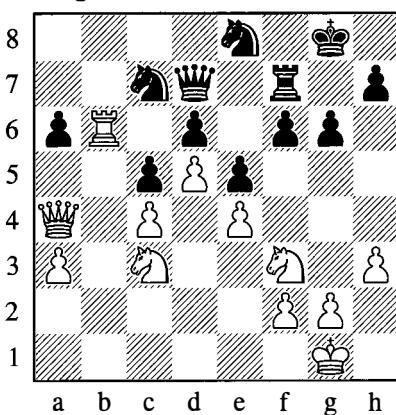

Diagram 11-5

25...♝xd7 26.♞d2

The knight has fulfilled its defensive duties on the kingside and now heads to the queenside, to attack the pawn weaknesses there.

26...♛f8 27.♝b3 f5 28.f3 h5 29.♞a5 ♜d8!?

Passive defence is totally hopeless; the queenside is too weak. I was more concerned by play on the kingside. After 29...f4 (intending ...g5-g4), White will still have to work hard to bring home the full point.

30.♞c6 ♜a8 31.♝b7

White prepares the decisive regrouping.

31...a5**Diagram 11-6****32.♞a4!**

Threatening ♜b6.

32...♜a6 33.♞b8

The rook is trapped. 33...♜a8 is met by 34.♞b6+–. White just wanted to win a little pawn on the queenside, but caught a much bigger fish in his net.

1.♞f3 d5 2.c4 e6 3.g3 ♜f6 4.♝g2 dxс4 5.♛a4† ♜bd7 6.♛xc4 c5 7.0–0

A slight inaccuracy. Modern theory recommends 7.♛b3 here, with the point that 7...b6? can be strongly met by 8.♞e5!±.

7...b6! 8.d4

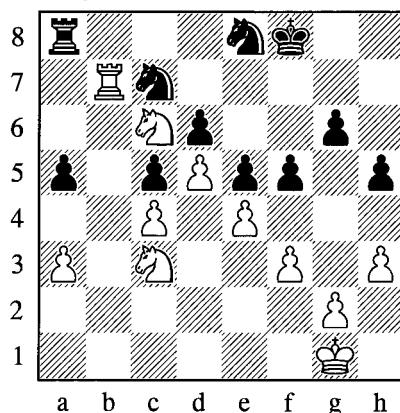

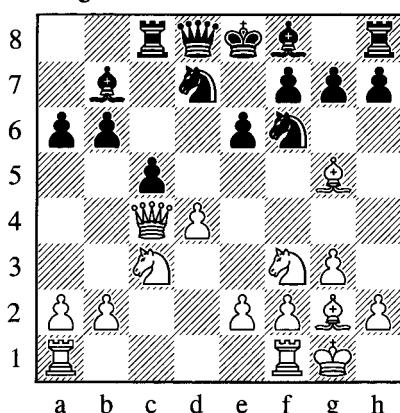

If 8.♞d4 then 8...♞e5 9.♞c6 ♜xc4 10.♞xd8 ♜d5 leads to equality.

8...♝b7 9.♞c3 ♜c8 10.♝g5 a6**Diagram 11-7**

Black has developed his queenside harmoniously. This draws the teeth from any possible initiative by his opponent on the queenside. With his last move Black is preparing ...b5.

11.a4?!

After this move a weakness becomes apparent in the white camp – the b4-square. White should prefer 11.dxc5 ♜xc5 12.♛h4=.

11...h6 12.♝xf6 ♜xf6 13.♝fd1 cxd4 14.♛xd4 ♜xd4**Diagram 11-6****Diagram 11-7**

Positional play 2

The transition to an endgame is okay for Black, since his pawns on the queenside are secure.

15.♕xd4 ♕xg2 16.♕xg2 ♕c5

The bishop does not have quite enough space on the diagonal, as Black wants to reserve the e7-square for his king. If 16...♗b4 then 17.♗a2 ♕c5 18.♗b3=.

17.♗b3 ♕e7 18.♗xc5 ♕xc5 19.♗d4

Diagram 11-8

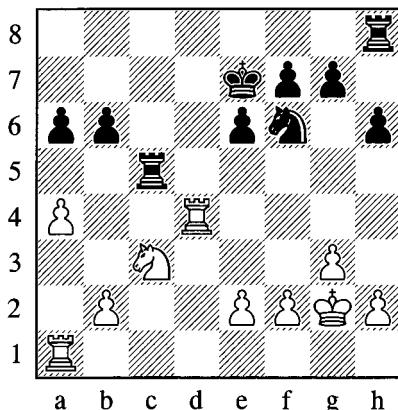

Diagram 11-8

The position is almost level. Black's only real advantage is the somewhat better position of his pawns on the queenside.

19...♖hc8 20.♖ad1 ♕c4 21.h3 g5??

Black makes an attempt to loosen up the opposing position on the kingside.

22.f4 gxf4 23.gxf4 ♖xd4 24.♖xd4 ♔d7 25.♔f3 f5 26.e4

White is playing solidly and is still standing up to Black.

26...fxe4† 27.♖xe4 ♕c5

A small plus – the black rook is slightly more active (the possibility of playing ...♖h5 and attacking the h-pawn ties the white king to f3).

28.♖d4 a5

Since 28...♖f6 can be met 29.♗b4=, the text is played to allow Black to activate his knight; in return for this, Black is willing to give up the b5-square.

29.♗b5?

Without any necessity, White allows the rook to penetrate to his second rank. In the endgame you should try to restrict the opposing pieces and not let them into the game.

Wait and see would be a better policy: 29.♖e4=

29...♖c2 30.b4 axb4 31.♖xb4 ♗f6

Black will try to attack the kingside pawns.

32.♖d4 ♕c1 33.♗g3 ♕g1† 34.♗f2 ♕b1

Bringing the rook to the most active position.

35.♗g2 ♕b3 36.♗h2

White does not know what to do.

36.♗d6?? loses to 36...♖xb5.

36.♗a7 ♗d5 is quite pleasant for Black.

36...♗h5!

Threatening ...♗f3.

 $\mathbb{Q}xf4$ would not be enough, as the passed a-pawn gives White counterplay: 40.a5 $\mathbb{E}xh3\#$ 41. $\mathbb{Q}g1$ $\mathbb{Q}e2\#$
42. $\mathbb{Q}g2$ A draw seems likely.

38. $\mathbb{Q}g1$ $\mathbb{Q}g3$

The threat is ... $\mathbb{Q}e2\#$, so White is forced into the following variation.

39. $\mathbb{Q}c8\#$ $\mathbb{Q}f6$ 40. $\mathbb{E}d6$ $\mathbb{Q}e2\#$ 41. $\mathbb{Q}f1$ $\mathbb{Q}xf4\#$

Diagram 11-10

Black now gets a small material advantage. But what is even more important is that his pieces are very active and well coordinated. The opposing pieces, on the other hand, are strewn around the board and not in real communication with each other.

42. $\mathbb{E}xb6?$!

42. $\mathbb{Q}xb6?!$ is a better defensive try.

42... $\mathbb{E}a2$

To prevent counterplay, Black wants to eliminate the a-pawn.

43. $\mathbb{E}b3?$!

43. $\mathbb{E}a6?!$ is more resilient.

On the other hand, 43. $\mathbb{E}b4?$ is very bad: 43... $\mathbb{E}a1\#$

44. $\mathbb{Q}f2$ $\mathbb{Q}d3\#$ —+

43... $\mathbb{E}xa4$ 44. $\mathbb{Q}f2$

44. $\mathbb{Q}d6$ $\mathbb{E}a1\#$ (or 44... $\mathbb{E}d4?$) 45. $\mathbb{Q}f2$ $\mathbb{E}h1$ is also not encouraging for White.

Diagram 11-11

Black now finds a forced manoeuvre which punishes the bad coordination of the white pieces.

44... $\mathbb{E}a2\#$! 45. $\mathbb{Q}g3$ $\mathbb{Q}e2\#$ 46. $\mathbb{Q}g4$

46. $\mathbb{Q}f3?$ $\mathbb{Q}d4\#$ —+

46... $\mathbb{E}a4\#$!

Forcing the king to go even further forward. Such attacks on the king are not frequent in the endgame.

47. $\mathbb{Q}h5$

We have already seen this position as Ex. 22-6 in *Boost Your Chess 1*. Black combines his threats against rook and king and wins material.

47... $\mathbb{Q}d4!$

Threatening $\mathbb{Q}xb3$, and also $\mathbb{Q}f5$ followed by $\mathbb{E}h4\#$.

48. $\mathbb{E}g3$ $\mathbb{E}a5\#$

White is losing his rook by force.

1...a6!

(3 points)

An important move. Otherwise White could break up the black pawn structure on the queenside (with a5-a6) and activate his light-squared bishop. Now the a5-pawn becomes weak. 1 consolation point for any of the developing moves 1... $\mathbb{Q}b4$, 1... $\mathbb{Q}d6$ or 1... $\mathbb{Q}e7$.

I.Ivanisevic – I.Miladinovic

Mataruska Banja 2007

White has some lead in development. All of his pieces are active and could not be placed much better, with the possible exception of the knight. But if Black could finish his regrouping and put his knight on d6, then it would be very difficult for White to break through on the queenside. Furthermore Black would be ready to counterattack with ...f5.

19.d6!

(2 points)

This prevents Black's idea, at the same time obtaining a dream position on d5 for the knight. The pawn is a small price to pay for these positional achievements. I don't think that white has any real advantage after: 19. $\mathbb{Q}a4$ (1 consolation point) 19... $\mathbb{Q}d6$ 20. $\mathbb{Q}c5$ b6 21. $\mathbb{Q}d3$ f5?

19...cxd6

20. $\mathbb{Q}d5$ $\mathbb{W}d8$

White has obvious positional compensation. The knight on d5 is beautiful and it will take some time and effort to remove it. Until this happens it is not easy for Black to get his pieces into play. For this reason White has time to strengthen his position gradually.

21.g3!?

21. $\mathbb{B}c3!?$ was a bit more direct, and also promising for White.

21...g6 22.h4±

Either 7. $\mathbb{Q}f1$? or 7.b4? would be less weakening.

7... $\mathbb{E}ae8$ 8. $\mathbb{Q}f1$ $\mathbb{Q}e6\#$

Black will continue with ... $\mathbb{Q}g5$, after which a piece sacrifice on h3 becomes a serious possibility.

Bishop against pawns

In the endgame of bishop against pawns, there is not a lot of theory to be studied. We dealt with the most important fortresses in the lessons on ‘The wrong bishop’ (*Build Up Your Chess 1*, Chapter 22) and ‘Fortresses’ (*Boost Your Chess 1*, Chapter 6). These elementary fortresses should be learned by heart. In this chapter we introduce a few more ideas.

The ‘scissors’

The ‘scissors’ is a chess term for the situation where a bishop is matched against two passed pawns which it can only stop by covering different diagonals.

Diagram 12-1

J.Kling & B.Horwitz

1851

1.c5 ♕g5 2.c6 ♕d8

4...♕h7 5.♕e6 ♕g8 6.♕d7! ♕a5

6...♕xf6 7.c7+–

7.♕e8+–

The principle of the single diagonal

In the struggle against passed pawns, the bishop is very effective when it can stop these pawns on a **single diagonal**. Sometimes, as well as stopping the opposing passed pawns, the bishop can protect its own pawns if they are on the same diagonal.

'Pawns in the sights'

This defines a very useful method of fighting against passed pawns. Our bishop attacks the opposing pawns with the goal of forcing them to move so that they can then be stopped on a diagonal. Alternatively, this technique can be used to force the opposing king to defend its pawns.

Attacking with queen and pawn

We have already encountered various forms of coordination between queen and pawn in the chapters ‘Mating motifs 2’ and ‘Combinations involving promotion’ (both from *Build Up Your Chess 1*), and in the chapter on ‘The pawn wedge’ (*Boost Your Chess 1*). A far-advanced pawn can strongly support the queen in the attack. The pawn can protect the queen, deprive the opposing king of escape squares, or itself enjoy the protection of the strongest piece. In this chapter we shall deal with various combinations in which a queen and a pawn work together in a successful attack on the opposing king.

Try to solve the following positions. Think about each for a maximum of ten minutes. If you find the solution, then look through the variations on the board. If you have not yet found the solution, then spend another five minutes looking for new ideas in the position. Then you may look at the solutions.

1. $\mathbb{W}d8\#$ $\mathbb{Q}a7$ 2. $\mathbb{Q}b5\#$ $\mathbb{Q}a6$ 3. $\mathbb{Q}xc7\#$ $\mathbb{Q}a7$

It is reassuring to know that we have at least a perpetual check. In a practical game, we could have calculated the variation this far, and then played the above moves, hoping to find a solution once we reached this position.

Diagram 14-1

Attacking

An attack on the opposing king is the most natural of strategic plans. It is important to properly prepare an attack on the king, and then to conduct it energetically. In doing so, you should not forget the following important points.

Bring your reserves into the attack in good time

Less experienced players sometimes try to attack too soon, without having sufficient forces or a good attacking position. Such a premature attack has no chance of success against more experienced opponents. You must try to support your attacking efforts with all your forces. When attacking you should neither hesitate nor wait too long, but often the most important factor is that you bring your reserves into play in good time.

Diagram 14-1

A.Yusupov – V.Ivanchuk

Riga 1995

White has sacrificed two pawns, but has a lead in development. He brings his forces into the attack.

1.♘e4

The knight closes in on the opponent. If 1.♗d5 then 1...b5∞.

1...0–0 2.♗h1

White unpins his rook, which can now easily transfer to the kingside via the third rank.

2...♘e5?

Black prepares his defence and brings the knight over to the kingside. However, the knight was not badly placed on d7, and was ready to head for f6 or f8.

As Aagaard pointed out in his excellent book *Attacking Manual 1*, Black would be better immediately activating his strongest piece. This can be done either by 2...b6!? followed by ...♗c7-e5, or by 2...♗b6 intending ...♗b5.

3.♗h3

This prepares an attack on h7.

3...♘g6

3...h6 would only weaken the castled position. White would have at his disposal the combination 4.♕xh6! gxh6 5.♗f6†. The following variation shows how White could pursue the attack: 5...♔h8 6.♗xe5 ♘b8 7.♗e4 ♔g7 8.♗f1 ♘h8 9.♗h5† ♔f8 10.♗b4† ♔e8 11.♗f6† ♔d8 12.♗d1† ♔c7 13.♗d6#

Diagram 14-2

4.♗h5?

A good move, which includes the queen in the attack with tempo.

However, White could already destroy the castled position with a combination. As some quite complicated analysis by Dolmatov shows, White can also achieve a decisive advantage by 4.♗xh7? and:

a) 4...♗f4 5.♗g4 ♔xh7 6.♗g5† ♔g8 7.♗h4! ♘e8 8.♗h7† (8.♗xf4 b5 is less convincing) 8...♔f8 9.♗h8† ♔e7 10.♗xg7 ♘f8 11.♗h7 ♘d7 12.♗f6† ♘e8 13.♗xf4 ♘d8 14.♗b4+–

4...h6

Diagram 14-3

5.♗f6†?!

A tempting sacrifice, though in the game White was unable to find the correct follow-up.

From a practical point of view, the better solution was first to activate one of the reserves – the b3-bishop – with 5.♗c2! and now:

a) 5...e5 6.♗f6† ♔h8 (or 7...gxh6 8.♗g3 followed by ♘xg6† with a mating attack) 7.♗g3 ♗f4 (7...♔e6 8.♗xg6 fxg6 9.♗xg6 ♔g8 10.♗xg8 ♘xg8 11.♗h7† ♘f7 12.♗b3† ♔f6 13.♗f1!+–) 8.♗xe5 ♗g6 9.♗xg6 fxg6 10.♗xg6 b5 11.♗xh6† gxh6 12.♗d7!+–

b) 5...♗f4 6.♗f6† ♔h8 7.♗xf7! ♘d7 8.♗xh6†!+–

5...gxh6

Black cannot decline the sacrifice: 5...♔h8? 6.♗g5! e5 7.♗xh6† gxh6 8.♗xh6#

6.♗xh6 ♘e8

Diagram 14-4

7.♗g3?

The victory was still there until this obvious move threw it away.

Diagram 14-2

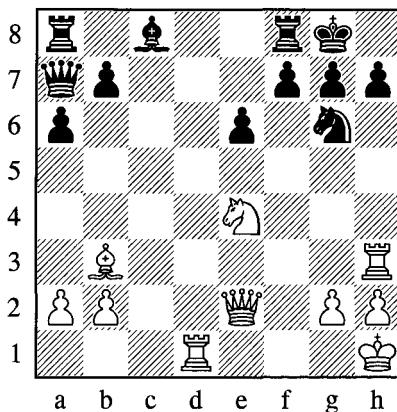

Diagram 14-3

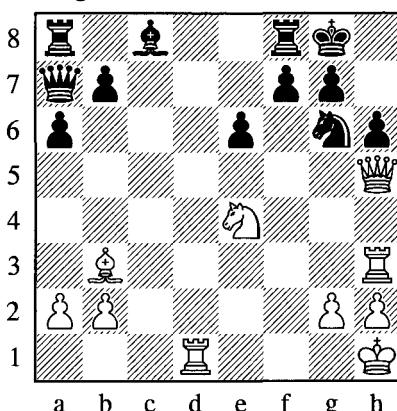

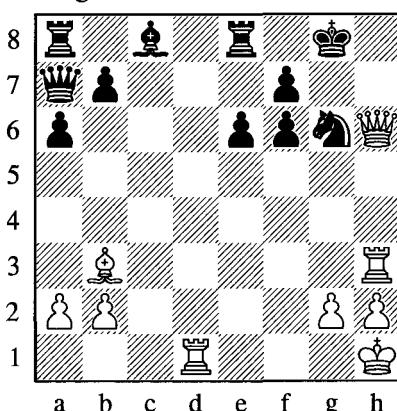

Diagram 14-4

Strategy 2

Nor does 7.♗c2? achieve anything, on account of 7...f5.

Instead, White could still win with 7.♕h7† ♖f8 8.♗f3! (Aagaard).

Diagram 14-5

A paradoxical idea. Instead of bringing the bishop directly into play, White in many variations opens the important a2-g8 diagonal, and thus brings the play to the bishop! White wins quickly in all lines:

- 8...♔e7 9.♕g7 f5 10.♗xf5+-
- 8...♕c5 9.♗xf6 ♔e5 10.♕h6† ♔e7 11.♕g5+-
- 8...b5 9.♗xf6 ($\Delta\ddot{b}xg6$) 9...♔e5 (9...♕e7 10.♗xg6+-) 10.♕h6† ♔e7 11.♕g5 ♖f8 12.♕xe5+- 7...♕f2!

This timely activation of the queen also draws the teeth from the idea of h2-h4-h5, and forces White to give perpetual check.

8.♗xg6† fxg6 9.♕xg6† ♖f8 10.♕h6† ♔f7

Of course not 10...♔e7?? 11.♕g7#.

11.♕h7† ♖f8 12.♕h8†

½-½

Coordination of the attacking pieces

You should try to open files for your major pieces and diagonals for your bishops and queen, aiming towards the opposing king. Your knights should be brought closer to the opposing position, ideally on supported squares. It is very important to bring the queen near to the opposing king. Far-advanced pawns can also offer good support to an attack. Your pieces will be well coordinated if they are aiming at a weak point.

Weaken the opponent's castled position

In order to weaken the opposing position, provoke pawn moves in the castled position. The weakened position is easier to attack. The castled position can often be destroyed with a sacrifice.

Diagram 14-11

The black king is left without sufficient protection. Meanwhile White is attacking with queen, knight and bishop.

17... $\mathbb{W}e7$ 18. $\mathbb{Q}g6\uparrow$ -

There is no good defence against $\mathbb{W}h8\uparrow$. If 18... $\mathbb{W}e6$ then simply 19.f5.

1-0

Exchanging a good defensive piece can also lead to the weakening of the castled position. In addition, it is often easier to fight against fewer defensive pieces. For example, we saw in Diagram 14-9 above that the threat to exchange the e3-knight led to the collapse of the black defences.

The pawn storm

Advancing pawns can play an important role in an attack. They can drive the opposing pieces away from good positions, and the exchange of pawns results in the opening of lines for the attack. To conduct a pawn storm, you must first have a **secure position in the centre**; otherwise there is a great danger of being counter-attacked.

Attacking with rook and bishop

Rook and bishop are very easy to coordinate. However, they cannot mate the opposing king without extra help; to do so they need either their own or opposing pieces to block the king's escape route.

Normally the bishop takes on the supporting role and the rook 'closes the door', but it can happen the other way round. We have already observed some examples of the cooperation between these pieces; for example, the 'windmill' (Chapter 1 of *Boost Your Chess 1*) and Pillsbury's mate (Chapter 2 of *Build Up Your Chess 1*).

The bishop can support the rook by depriving the king of escape squares and/or providing the rook with the necessary protection. It is clear that for this coordination, **open lines and diagonals** are required.

The following mating combinations illustrate the power of these pieces.

Knight against pawn

This subject is not completely new to us, as we have already covered some important theoretical positions. For example, in Chapter 23 of *Build Up Your Chess 1*, we looked at ‘Smothered mate’ with the king locked in the corner.

We also examined several very important drawing positions in Chapter 6 of *Boost Your Chess 1* – Fortress II, IV and VIII. It would be useful to revise that material before proceeding with this chapter.

Knight against rook's pawn

The rook's pawn is the number one enemy of the knight!

Knight against pawn

Diagram 16-3

The end of a study by

N.Grigoriev

1932

The rook's pawn is a particularly uncomfortable opponent for the knight, because the knight can only stop it from one side. Nevertheless, a draw can be obtained if the knight can block the pawn in time, that is, before it reaches the 7th rank. In this position, White's aim is to control the h2-square from g4 or f1.

1. ♟d2†? is bad: 1... ♕e2! 2. ♟e4 h3 3. ♟g3† ♕f2 4. ♟h1† ♕g2 The knight is trapped in the corner, and the white king is too far away from the saving f2-square!

Knight against pawn

Such endings can usually only be won if the king can prevent the knight approaching the pawn; but in some rare cases the king can force the knight away from the pawn. Here is a nice winning idea.

Diagram 16-7

The end of a study by

Y.Averbakh & V.Chekhover

Let's first examine the 'normal' moves:

- a) 1.b8 \mathbb{W} ? obviously allows 1... $\mathbb{Q}c6\#$ =.
- b) 1. $\mathbb{Q}a8$? $\mathbb{Q}c6$ = is also clear.
- c) 1. $\mathbb{Q}b6$? also leads to a draw: 1... $\mathbb{Q}d7\#$ 2. $\mathbb{Q}c7$ (2. $\mathbb{Q}c6$ $\mathbb{Q}b8\#$) 2... $\mathbb{Q}c5!$ 3.b8 \mathbb{W} $\mathbb{Q}a6\#$ =

The white king must travel by a different route.

1. $\mathbb{Q}b8!!$

This blocks the passed pawn, but lets the king reach the correct squares! The threat is 2. $\mathbb{Q}c7$.

1... $\mathbb{Q}d7\#$

1... $\mathbb{Q}c6\#$ 2. $\mathbb{Q}c7$ $\mathbb{Q}b4$ loses to 3. $\mathbb{Q}b6!$ $\mathbb{Q}d5\#$ 4. $\mathbb{Q}c6$ $\mathbb{Q}b4\#$ 5. $\mathbb{Q}b5=$.

2. $\mathbb{Q}c8!$

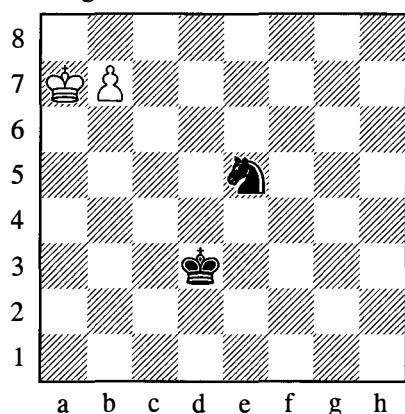

The point! The king could not reach this square in the variation with 1. $\mathbb{Q}b6$.

But not 2. $\mathbb{Q}c7?$ $\mathbb{Q}c5!=$ as in line 'c' above.

2... $\mathbb{Q}b6\#$ 3. $\mathbb{Q}d8$

White wins.

Diagram 16-7

In the endgame with a knight against a central pawn, all that is required to draw is for the knight to control the queening square from the second rank.

Speeding things up with checks is an important motif.

Attacking with rook and knight

In practice it is not always easy to coordinate the rook with the knight. Unlike the bishop, the knight must first be brought close to the opposing pieces. But when a knight is in a protected, attacking position, it can be very dangerous and can give good support to the rook. We saw examples of the cooperation between these pieces, such as Anastasia's mate and the Arabian mate, in the lesson on 'Mating motifs' (*Build Up Your Chess 1*, Chapter 1). Here are some more mating patterns.

4. $\mathbb{E}f2 \mathbb{Q}c5$ 5. $\mathbb{E}af1 \mathbb{W}xd2+$

The rook and knight tandem becomes even more dangerous if it is receiving direct or indirect support from other pieces or pawns. We saw a beautiful illustration of this in Ex. 22-7 from *Boost Your Chess 1*. Here are some more examples.

- ✓ The role of the centre
- ✓ Typical plans in the Closed Sicilian

Semi-open games

In this chapter we shall examine the Closed Variation of the Sicilian Defence. Play in this variation develops relatively slowly. White generally tries to take action on the kingside, and he must often be prepared to throw his pawns forward. Black, on the other hand, looks to obtain counter-chances on the queenside. Of course, the relatively closed nature of the play does not mean that the centre should be ignored. On the contrary, **it is only good control of the centre which allows us to attack.**

The main focus of this variation is not on specific moves, but on the various typical plans. For that reason, it is very important to find games with good annotations, and to study them well. In this chapter we shall stick to games played by Vasily Smyslov.

A standard plan for Black is to fianchetto his king's bishop. This may be combined with the moves ...d6, ...e6 (or sometimes ...e5) and ... $\mathbb{Q}ge7$. This is quite a safe set-up, and Black may later stop the advance of the white kingside pawns with ...f5.

A second, more ambitious alternative is ...d6 and $\mathbb{Q}f6$, after which Black tries to act quickly on the queenside.

We shall now look at two typical games.

V.Smyslov – A.Kotov

Moscow 1943

1.e4 c5 2. $\mathbb{Q}c3$

This move does not automatically mean that White wants to play the Closed Variation. For example, after 2...e6 he can continue with 3. $\mathbb{Q}f3$ followed by 4.d4, transposing into other variations. Black should always bear that possibility in mind.

2... $\mathbb{Q}c6$

Here is an example of a set-up including ...d5 from the Fischer – Spassky rematch: 2...e6 3. $\mathbb{Q}ge2$ $\mathbb{Q}c6$ 4.g3 (4.d4 takes the game in a different direction) 4...d5 5.exd5 exd5 6.d3 $\mathbb{Q}f6$ 7. $\mathbb{Q}g2$ $\mathbb{Q}e7$ 8. $\mathbb{Q}g5$ d4 9. $\mathbb{Q}xf6$ $\mathbb{Q}xf6$ 10. $\mathbb{Q}e4$ $\mathbb{Q}e7$ 11. $\mathbb{Q}f4$ 0–0 12.0–0 $\mathbb{Q}e8$ 13. $\mathbb{Q}h5!$ g6 14. $\mathbb{Q}d5$ $\mathbb{Q}f5$ 15. $\mathbb{Q}fe1$ $\mathbb{Q}g7=$ Fischer – Spassky, St Stefan/Belgrade (23) 1992.

3.g3

It is only with the fianchetto of the king's bishop that we enter the Closed Variation. An earlier game from the aforementioned match went: 3.♗ge2 e6 4.g3 d5 5.exd5 exd5 6.♗g2 d4 7.♗d5 ♗f6 8.♗ef4 ♗xd5 9.♗xd5 ♗d6 10.0–0 0–0 11.d3 ♗e6 12.♗f4 ♗f5 13.h3! ♗b8 14.♗d2 ♗e8 15.♗e1 ♗xe1† 16.♗xe1= ♗d7?! 17.g4! ♗e8 18.♗d1 ♗xf4 19.♗xf4 ♗e6 20.♗f3± Fischer – Spassky, St Stefan/Belgrade (17) 1992.

3...g6 4.♗g2 ♗g7 5.d3 d6 6.♗f3?!**Diagram 18-1**

Another plan of development for White is 6.♗ge2 followed by 0–0, ♗e3 and ♗d2.

White may also play 6.f4 followed by ♗f3 and 0–0, which is featured in the following game.

6.♗e3 is also popular, and we shall see examples of it in the exercises at the end of the chapter.

6...e6 7.♗g5

An important idea. White aims to play ♗d2 and ♗h6 to exchange the fianchettoed bishop. Then White will have a freer hand on the kingside. This plan is very sound, since the opponent's dark-squared bishop is also attacking our queenside.

7...♗ge7 8.♗d2 h6

Black does not want to allow the exchange of bishops, but after this he will be unable to castle.

8...0–0 9.♗h6 e5 is a standard reaction; with the bishops coming off, Black places his pawns on the dark squares.

9.♗e3 e5

Black prepares to develop his light-squared bishop.

9...♗d4?! is a playable alternative.

On the other hand, 9...♗b8?! is a typical mistake:

Diagram 18-2

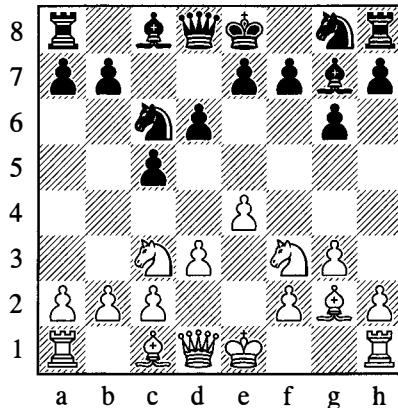

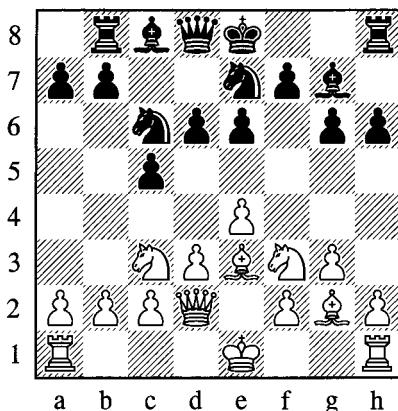

10.d4! cxd4 11.♗xd4± The d6-pawn is a decided weakness.

10.0–0 ♗e6 11.♗e1

If 10.♗e3 then 10...b4 11.♕e2 ♖d7 12.♗b1 ♖a5=.

I believe that 10.a3! is a good alternative, although it is not always easy to evaluate who gains more from the opening of the a-file. The following classical game gives a good example of how White may prepare a kingside attack: 10...a5 11.♗e3 b4 12.axb4 axb4 13.♗e2 ♖b7 (13...♖d7?!) 14.b3! ♖a8 (14...♖d7 15.♗c1 e6 16.g4 d5??) 15.♗c1 ♖a2 16.g4 ♖a8?? 17.♗e1 ♖a6?? 18.♗f2 ♖a7?? 19.f5! ♖b5 20.fxg6 hxg6 21.♗g5 ♖a3 22.♗h4 White had a powerful attack in Spassky – Geller, Sukhumi (6) 1968; the major threat is ♗xf6.

10...b4 11.♗e2

Diagram 18-10

11...c4

Black wants to open lines on the queenside as quickly as possible. This strategy is understandable since White is aiming to attack on the kingside (♗h1 followed by f4-f5, possibly with a later ♖e1-h4). However, Black now loses control over the d4-square. Smyslov immediately seizes the opportunity to strengthen his position in the centre.

Combinations involving promotion

This lesson continues the theme of Chapter 19 of *Build Up Your Chess 1*, and presents some more examples of combinations involving promotion.

The more pieces that have been exchanged, the greater the value of the pawns. One of the main aims in the endgame is to promote a pawn, although you do not always need a combination to achieve that.

Diagram 19-1

A.Morozevich – L.Van Wely

1...b2?

Black misses his chance. The correct idea is 1... $\mathbb{Q}d3!$ 2. $\mathbb{Q}g4$ $\mathbb{E}e3!$ and White cannot stop the b-pawn! For example: 3. $\mathbb{E}f7$ f3! (3...b2? 4. $\mathbb{Q}f6!$ $\mathbb{Q}c5$ 5. $\mathbb{Q}f5!$ $\mathbb{Q}b4$ 6. $\mathbb{Q}xf4!$ $\mathbb{Q}a3$ 7. $\mathbb{Q}f1=$) 4.gxf3 b2 5. $\mathbb{Q}f6!$ $\mathbb{Q}c5$ 6. $\mathbb{Q}f5!$ $\mathbb{Q}c4$ 7. $\mathbb{Q}f4!$ $\mathbb{Q}c3=+$

2. $\mathbb{Q}e1$ $\mathbb{Q}b4$ 3. $\mathbb{Q}b1$

The position is now drawn.

Candidates Match (3), Wijk aan Zee 1994

1.d6?

This obvious move does not achieve its goal, since the black king is able to take part in the defence.

1.b5? is no better, because after 1... $\mathbb{Q}f8!$ the king is in time to blockade the d-pawn, and Black secures the draw.

The correct way to advance the pawns is 1. $\mathbb{Q}c8!$ $\mathbb{Q}g7$ 2.b5 $\mathbb{Q}f6$ 3. $\mathbb{Q}e8!$ White cuts off the king, and on its own the black rook can only eliminate one of

the pawns. After either 3... $\mathbb{Q}b3$ 4.d6 $\mathbb{Q}xb5$ 5.d7+– or 3... $\mathbb{Q}d3$ 4.b6 $\mathbb{Q}xd5$ 5.b7+– Black must give up his rook for the remaining pawn.

1... $\mathbb{Q}g7!$ 2.b5

But not 2.d7? $\mathbb{Q}d3$ 3. $\mathbb{Q}c7$ $\mathbb{Q}f6$ 4.b5 $\mathbb{Q}e6$ 5.b6 $\mathbb{Q}xd7$ 6.b7, because Black can stop the b-pawn: 6... $\mathbb{Q}d1\#$ 7. $\mathbb{Q}f2$ $\mathbb{Q}b1\#$

2... $\mathbb{Q}f6$

Diagram 19-3

3.d7†?

Once again, advancing the d-pawn is not best. White's last chance was: 3. $\mathbb{Q}c1!$ $\mathbb{Q}e6$ (3... $\mathbb{Q}d3$ 4.b6 $\mathbb{Q}xd6$ 5.b7 $\mathbb{Q}b6$ 6. $\mathbb{Q}c6\#!$ +– is an important point) 4. $\mathbb{Q}b1$ The rook belongs behind the passed pawn! 4... $\mathbb{Q}c3$ 5.b6 $\mathbb{Q}c8$ 6.b7 $\mathbb{Q}b8$ 7. $\mathbb{Q}b6$ The black rook is passively placed in front of the b-pawn, not actively behind it as in the game. So White still has winning chances.

3... $\mathbb{Q}e7$ 4. $\mathbb{Q}d6$ $\mathbb{Q}d8=$

The king blockades the d-pawn and the rook will go behind the b-pawn; White can no longer win.

5. $\mathbb{Q}f6$ $\mathbb{Q}xd7$ 6. $\mathbb{Q}xf7\#$ $\mathbb{Q}e6$ 7. $\mathbb{Q}xh7$ $\mathbb{Q}b3$ 8. $\mathbb{Q}b7$ $\mathbb{Q}b2!$

Although White has won a pawn, he cannot win the endgame with his king cut off.

9.b6

Or 9.h3 e4 10. $\mathbb{Q}h2$ e3 11. $\mathbb{Q}g3$ e2 12. $\mathbb{Q}f2$ e1 $\mathbb{Q}\#$ 13. $\mathbb{Q}xe1$ $\mathbb{Q}xg2=$.

9...e4 10. $\mathbb{Q}b8$ e3 11. $\mathbb{Q}f1$ $\mathbb{Q}f6$ 12.h4 $\mathbb{Q}g7$ 13.g4 $\mathbb{Q}h7$ 14. $\mathbb{Q}b7\#$ $\mathbb{Q}g8$ 15. $\mathbb{Q}e1$ $\mathbb{Q}h8$ 16.h5 $\mathbb{Q}xh5$ 17. $\mathbb{Q}xh5$ e2 18.h6 $\mathbb{Q}g8$ 19. $\mathbb{Q}g7\#$ $\mathbb{Q}h8$ 20.b7 $\mathbb{Q}b1\#$ 21. $\mathbb{Q}xe2$ $\mathbb{Q}b2\#$ 22. $\mathbb{Q}d3$ $\mathbb{Q}b3\#$ 23. $\mathbb{Q}c4$ $\mathbb{Q}b4\#$ 24. $\mathbb{Q}xb4$

Mate in three moves

In this lesson we continue with your training in the calculation of variations. Solving chess problems with natural-looking positions is a good way to practise calculating short variations.

In all the positions in this chapter, you should look for a mate in three moves! It is important that you calculate and write down only the necessary variations. If we have reached a position in which we are threatening mate, we need only concern ourselves with the moves which parry this threat of mate. You only have to write down the first two moves of the solution. However, you must be certain that mate will follow on the third move.

Try to solve the following positions. At first, think for a maximum of ten minutes without moving the pieces. If you cannot find a solution, then you may move the pieces and think things over for another ten minutes. Only then should you look at the solutions.

One of World Champion
Anatoly Karpov's many talents was his ability
to weave mating nets in the endgame

Mating nets in the endgame

In the game of chess the highest priority of all must be given to the safety of the king. In the opening and in the middlegame we are continuously faced with this problem. In the endgame things appear to be slightly different. The exchange of numerous pieces allows our king to become active and show what a strong piece it is.

Nevertheless, even in the endgame some dangerous situations can arise. If our opponent has at least a rook or a couple of minor pieces, we need to think carefully about where to place our king. We must be wary of leaving our king on its own, or advancing it over-optimistically. The situation in which our king is cut off on the edge of the board is a particularly dangerous one.

Even a small but well organized army (often led by the enemy king!) can endanger our king. The best defence against such problems is good coordination of our forces, which can also support and protect the king.

Here are some examples of mating nets in the endgame.

Diagram 22-1

The passed pawn

The value of a pawn can vary during the course of a game. The nearer a pawn gets to the queening square, the more dangerous it becomes. But the way to the 8th rank must first be cleared of opposing pawns.

The value of a passed pawn is of course higher. This value becomes even greater in the endgame, when there are fewer pieces about to endanger our pawn, and thus more chances of promoting our pawn.

Diagram 22-1

M.Botvinnik – A.Lilienthal

Moscow 1936

1...b5?

This typical move is a positional mistake in this instance, as White obtains a strong outside passed pawn.

Botvinnik analysed 1... $\mathbb{Q}f6$ and now:

a) 2. $\mathbb{Q}xf6\#$ exf6 3. $\mathbb{W}xf6\#!$ ($\square 3.h5?!$ $\mathbb{W}e7$ 4.hxg6 hxg6 5. $\mathbb{W}d5\pm$) 3...d5! \rightarrow

b) Botvinnik's preference was the simple 2. $\mathbb{E}dc1$ $\mathbb{Q}xd5$ 3.exd5 $\mathbb{E}c7$ 4.h5 with attacking chances.

2.cxb5!

This ensures that White will get a passed pawn on the a-file.

2...axb5

After 2... $\mathbb{E}xc3$ White can just win a pawn with 3. $\mathbb{Q}xc3$, although getting a passed a-pawn by 3. $\mathbb{W}xc3$ axb5 4.a5! is even better.

3. $\mathbb{E}dc1$

White gain control of the c-file. The standard move 3.a5 is also good here.

3... $\mathbb{E}xc3$ 4. $\mathbb{E}xc3$ bxa4

Diagram 22-2

5. $\mathbb{E}c7!$

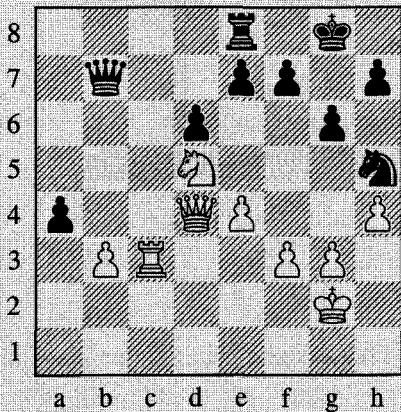

A strong intermediate move. If Black now takes the b-pawn, he will be mated: 5... $\mathbb{W}xb3$ 6. $\mathbb{Q}xe7\#$ $\mathbb{E}xe7$ 7. $\mathbb{E}c8\#$

5... $\mathbb{W}b5$ 6.bxa4

Botvinnik chooses a safe continuation.

6. $\mathbb{Q}xe7\#$ $\mathbb{E}xe7$ 7. $\mathbb{E}xe7$ axb3 is more complicated, in view of Black's strong passed pawn. However, with

Diagram 22-2

The passed pawn

accurate play White can win. For example: 8.♕c7 ♔g7 9.♔f6 ♕e2† 10.♔h3 ♕f1† 11.♔g4 h5† 12.♔g5+– 6...♕e2†

The exchange of queens is forced because the e7-pawn is hanging.

7.♕f2 ♕xf2† 8.♔xf2

Diagram 22-3

In the endgame the white passed pawn plays a decisive role. White can support it with his rook and knight, whereas the black knight is offside.

8...e6

8...♕a8 loses to 9.♕c8†! ♕xc8 10.♔xe7†.

9.♕b6 ♕f6 10.a5 ♕b8

Diagram 22-4

11.♕c8†!

The technical phase of the game is very instructive. White exchanges rooks and sets his passed pawn in motion.

11.a6 ♕xb6 12.a7 ♕a6 13.♕c8† ♕g7 14.a8♕ ♕xa8 15.♕xa8 d5 would leave White with work still to do.

11...♕xc8 12.♕xc8 ♕e8 13.a6 ♕c7 14.a7

The threat of 15.♕b6 forces the black knight into the corner.

Diagram 22-5

14... ♕a8

Black blocks the passed pawn, but loses a pawn. The ending is very easy for White, since Black has absolutely no counterplay.

15.♕xd6 ♕f8 16.e5 ♕e7 17.♔e3

The white king can either go to the queenside or penetrate on the kingside.

17...f6

If Black's king goes to the queenside, he loses his kingside pawns.

18.♔f4

Also good is 18.♕c8† ♕f7 19.♔d4+–.

20.♔e4 ♕g7 21.♔d4 ♕c7 22.♔c5

12.♗e3

Another option is 12.♗d2?! intending ♗a5.

12...♝b8 13.a4 ♗f6

Black should try 16...0–0 followed by ...f5.

17.♗xb6 ♜d7 18.0–0 0–0 19.b4**Diagram 22-7**

White continues to play on the queenside, and he will eventually obtain a passed pawn there. Black must seek counterplay.

19...♝bc8

Trying to exchange White's strong bishop by 19...♗d8 was a better defensive plan.

20.♗b1

The immediate 20.b5?! axb5 21.a6 ♗a8 22.♗b3 ♜b8 23.♗e3 is possible, and White has good compensation for the pawn. His passed pawn has only a couple more steps to take, although the final step is somewhat difficult to prepare.

20...♝c3

Here too, 20...♗d8?! would be an improvement, intending to meet 21.b5 with 21...♗xb6.

21.♗d2

Again 21.b5 is possible.

21...♝fc8

22...axb5

Although 22... $\mathbb{E}c2$ 23. $\mathbb{W}d1$ $\mathbb{E}xe2$ 24. $\mathbb{W}xe2$ $\mathbb{Q}xd5$ leads to a better position for White, it would give Black more counterplay than he obtains in the game.

23. $\mathbb{Q}xb5$ $\mathbb{W}f5$ 24. $\mathbb{Q}c6$

White wins the exchange, but 24.a6 $\mathbb{Q}a8$ 25.a7 looks even better.

24... $\mathbb{E}8xc6?$

24... $\mathbb{Q}xc6$! 25. $\mathbb{W}xc3$ $\mathbb{Q}xd5$ would have given Black better chances to defend.

25.dxc6 $\mathbb{E}xc6$ **Diagram 22-9****26. $\mathbb{Q}d8!$**

With this trick, White swaps off the important light-squared bishop.

26... $\mathbb{E}c2$

Black was pinning his last hopes on this move.

26... $\mathbb{W}d7$ loses to 27. $\mathbb{Q}xe7$ $\mathbb{W}xe7$ 28. $\mathbb{W}b2$ $\mathbb{Q}c8$ 29. $\mathbb{E}fc1$!.

After 26... $\mathbb{Q}xd8$ 27. $\mathbb{E}xb7$ Black cannot hold up the passed pawn for long.

27. $\mathbb{W}d1!$ $\mathbb{Q}xd8$ 28. $\mathbb{E}xb7$ **Diagram 22-10**

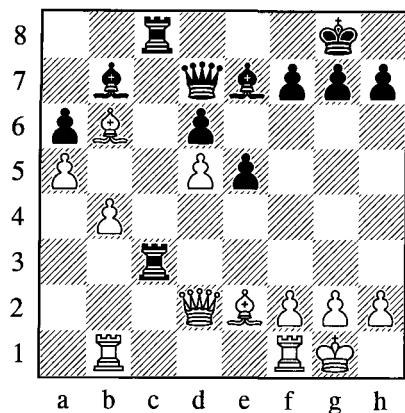

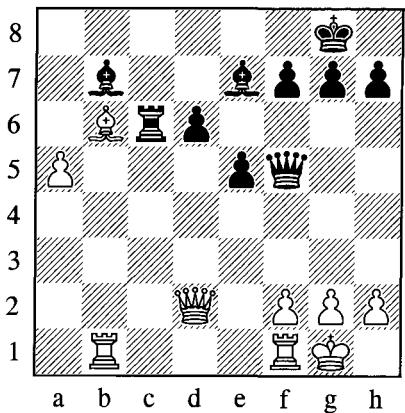

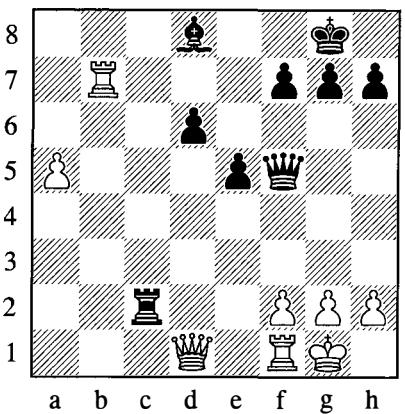

The a-pawn is safe from capture, because 28... $\mathbb{E}xa5$ is met by 29. $\mathbb{W}xc2!$ $\mathbb{W}xc2$ 30. $\mathbb{E}b8\#+-$.

1-0

In general, having a passed pawn can be considered an advantage. But how strong it is depends on other factors, such as the position of the pieces.

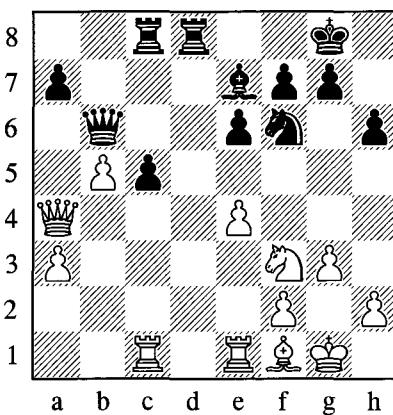

The player with a passed pawn must aim to **support it with all his forces and advance it**. One can either try to promote the passed pawn, or, if the opposing forces manage to stop our pawn, we can switch our attack to other targets. The passed pawn may be sacrificed in order to deflect the opposing pieces. We have seen such a procedure in pawn endings.

The side which is playing against a passed pawn must generally try to neutralize the passed pawn in good time. **A good method is the blockade**. In the middlegame the best way to stop the passed pawn is to blockade it with a bishop or a knight.

1...c4!

(2 points)

By opening the a7-g1 diagonal, Black can play for an advantage.

1...Qd7 (1 consolation point) aims to redeploy the knight to the b6-square, but it is a bit passive.

2.h3?!

Taking the c-pawn looks dangerous, but maybe it could be tried:

a) 2.Qxc4 Qg4 3.Qe2 (3.Qf1 Qd3 4.Qxd3 Qxc1+) 3...Qd3! Black has a strong attack.

b) 2.Qxc4 Qg4 3.Qe2 Qxc4 4.Qxc4 Qc5 5.Qc2 Qxb5 Black has regained the pawn and has the initiative.

2...c3 3.Qb3?!

3.Qg2? would limit Black's advantage.

Combinations involving files

In this chapter we shall take another look at combinations in which it is the major pieces acting along files that play a decisive role. It is important to point out that **the major pieces can best make their influence felt in open positions, and in particular when the opponent's castled position has been destroyed.**

Here are some examples which illustrate typical ideas.

Diagram 23-1**Diagram 23-1****S.Kagan – L.Shmuter**

Tel Aviv 1995

1...Qd4!!

This sacrifice is the preparation for a double attack. From a practical viewpoint, White has to accept the sacrifice, because otherwise his castled position will be destroyed after 2...Qxf3†.

2.exd4

2.Qxd4 cxd4 3.Qc5 Qc7! 4.exd4 b6—+

2...cxd4

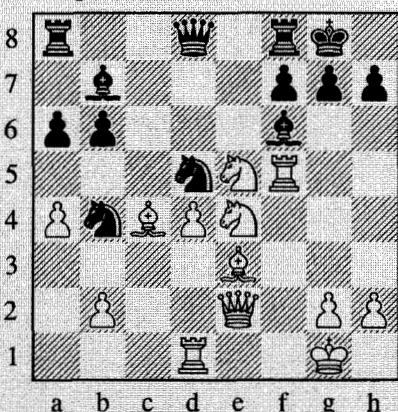

Black is attacking the queen and the rook. But what happens if White uses the rook to block the attack on his queen?

3.Qc5 Qc7!

The point of the combination. The c5-rook is pinned in two directions, and White loses a rook or a queen. This tactical motif has its own name: the Maltese Cross.

3.Qxc7

Diagram 24-1**Diagram 24-2****Queen against rook**

In this chapter we shall examine the elementary ending of queen against rook (without pawns). This ending is usually a win for the stronger side, although the route to the win can be long and complicated. ‘The exceptions are those cases in which the king does not manage to escape the checks, on account of stalemate or the loss of the queen.’ – Dvoretsky

Diagram 24-1**C.Cozio**

1766

An important drawn position. White exploits the black king being on the edge of the board along with the unfortunate placement of the queen on a neighbouring file. (Note that the position would also be drawn even with the queen on f5 or further back on the f-file.)

1.♕h2† ♜g4 2.♕g2† ♜h3

If the king goes to the f-file, Black loses the queen:
2...♜f4 3.♕f2=

3.♕h2† ♜g3

Otherwise Black cannot make any progress.

4.♕h3†! ♜xh3 stalemate

Diagram 24-2**D.Ponziani**

1782

Here the black king has an additional file at its disposal. However, because of the unfortunate position of the black queen on e6, White can organize a defence.

1.♕h7† ♜g2 2.♕g7† ♜f3 3.♕f7† ♜g4

The e-file is taboo: 3...♜e4 4.♕e7=

4.♕g7† ♜f5 5.♕f7† ♜g6 6.♕g7† ♜h6

6...♜f6 also leads to a draw after 7.♕g6†! ♜xg6 stalemate.

7.♕h7†!

Black cannot make progress.

7...♜xh7 stalemate

Or 7...♜g6 8.♕h6†! ♜xh6 stalemate.

The following important theoretical position demonstrates a winning method.

Diagram 24-3

F. Philidor

1777

Notice how White has organized his pieces. Here the queen is attacking from the edge of the board and the king is nearer to the centre of the board. If we swapped round the white pieces, Black could force a draw as in Diagram 24-1.

There is no check available to Black, since the white queen is controlling the c7-square. Both sides have their pieces in the best possible positions. To win the game, White simply has to transfer to his opponent the right to move! (We also make use of this example to provide an illustration of zugzwang in Chapter 10 of *Build Up Your Chess 2*.)

1. $\mathbb{Q}e5\#$ 1. $\mathbb{Q}a6?!$ $\mathbb{Q}c7\#$ 2. $\mathbb{Q}b6??$ allows 2... $\mathbb{Q}c6\#$.1... $\mathbb{Q}a8$ 1... $\mathbb{Q}c8$ 2. $\mathbb{Q}e8\#$ 2. $\mathbb{Q}a1\#$ $\mathbb{Q}b8$ 2... $\mathbb{Q}a7$ 3. $\mathbb{Q}h8\#$ 3. $\mathbb{Q}a5!$

Diagram 24-4

White has put his opponent in zugzwang by triangulating with his queen. Black must move his rook away from his king, after which White can win it with a double attack.

3... $\mathbb{R}b1$

Other moves also lose quickly:

a) 3... $\mathbb{Q}e7$ 4. $\mathbb{Q}d8\#$ b) 3... $\mathbb{Q}g7$ 4. $\mathbb{Q}e5\#$ c) 3... $\mathbb{Q}b2$ 4. $\mathbb{Q}e5\#$ d) 3... $\mathbb{Q}c8$ 4. $\mathbb{Q}a6\#$ e) 3... $\mathbb{Q}a7$ 4. $\mathbb{Q}d8\#$ f) 3... $\mathbb{Q}b3$ 4. $\mathbb{Q}e5\#$ $\mathbb{Q}a7$ 5. $\mathbb{Q}g7\#$ $\mathbb{Q}a8$ 6. $\mathbb{Q}g8\#$ g) 3... $\mathbb{Q}f7$ 4. $\mathbb{Q}e5\#$ $\mathbb{Q}a7$ 5. $\mathbb{Q}e3\#$ $\mathbb{Q}b8$ 6. $\mathbb{Q}e8\#$ h) 3... $\mathbb{Q}h7$ 4. $\mathbb{Q}e5\#$ $\mathbb{Q}a8$ 5. $\mathbb{Q}a1\#$ $\mathbb{Q}b8$ (5... $\mathbb{Q}a7$ 6. $\mathbb{Q}h8\#$) 6. $\mathbb{Q}b1\#$ 4. $\mathbb{Q}e5\#$ $\mathbb{Q}a7$ 5. $\mathbb{Q}d4\#$ $\mathbb{Q}a8$ 6. $\mathbb{Q}h8\#$ $\mathbb{Q}a7$ 6... $\mathbb{Q}b8$ 7. $\mathbb{Q}a1\#$ 7. $\mathbb{Q}h7\#$

Endgame 4

Diagram 24-5**Diagram 24-6****Diagram 24-7**

In practice, however, the stronger side does not always win this ending, since it is difficult to play faultlessly when time is limited. Here is a practical example of this.

Diagram 24-5

V.Achenbach – A.Yusupov

Simultaneous game, Essen 2000

For the ending of queen against rook (and others endings with six or fewer pieces) there exist *Nalimov Tablebases*, which enable a computer to analyse and play it perfectly. Our comments on this ending make use of these tablebases.

1. ♕e6 ♜c6† 2. ♕f5 ♜c5† 3. ♕f4 ♜d5 4. ♜c8

According to the computer, White wins more quickly with 4. ♜a8 ♜c5 5. ♜a4† ♜c3 6. ♜d7.

4... ♜d3 5. ♜c1

5. ♜a6† ♜d4 6. ♜a4† ♜c5 7. ♜e4 would be faster.

5... ♜d4 6. ♜c2 ♜d6 7. ♜d2† ♜c5 8. ♜c3†

And here 8. ♜a5† ♜c6 9. ♜e5 would be faster.

10... ♜c6 11. ♜c4† ♜d6 12. ♜f6

White is slowly pushing his opponent to the edge of the board.

12... ♜d8

12... ♜c7 would be more resilient according to the computer. 16... $\mathbb{E}d1$

16... $\mathbb{E}g8$ (intending $\mathbb{E}g6\#$) is answered by: 17. $\mathbb{W}h7!$
 18. $\mathbb{W}a7$ $\mathbb{E}d1$ 19. $\mathbb{W}c5\#$ $\mathbb{E}d8$ (19... $\mathbb{E}b7$ 20. $\mathbb{W}b4!$
 $\mathbb{E}c8$ 21. $\mathbb{W}c3\#$ leads to the same position) 20. $\mathbb{W}b4!$
 White controls the e1-square. As Mark Dvoretsky has remarked, **'It is not infrequent for quiet moves which limit the mobility of the opposing pieces to be much more effective than checks.'**

Diagram 24-8

20... $\mathbb{E}c7$ 21. $\mathbb{W}c3\#$ $\mathbb{E}d8$ 22. $\mathbb{W}b3$ $\mathbb{E}e1\#$ 23. $\mathbb{E}d6$ Black
 is either mated or loses the rook.

17. $\mathbb{W}f8\#$

The simple winning method of 17. $\mathbb{W}c5\#$ $\mathbb{E}d8$
 18. $\mathbb{W}b4!$ was examined in the previous note.

17... $\mathbb{E}c7$

17... $\mathbb{E}d8$ puts up stiffer resistance.

Diagram 24-9

20. $\mathbb{W}b4$

20. $\mathbb{W}b3!$ $\mathbb{E}e1\#$ 23. $\mathbb{E}d6$ wins immediately.

20... $\mathbb{E}c8$ 21. $\mathbb{W}b3?!$

The correct way to win is 21. $\mathbb{W}c3\#$ $\mathbb{E}d8$ 22. $\mathbb{W}b3$.

21... $\mathbb{E}c1$

Or 21... $\mathbb{E}d7?!$ 22. $\mathbb{W}a4$ $\mathbb{E}b7$ 23. $\mathbb{E}d6$ $\mathbb{E}b6\#$ 24. $\mathbb{W}c5$
 $\mathbb{E}b7$ 25. $\mathbb{W}a8\#$ $\mathbb{E}c7$ 26. $\mathbb{W}e8!$ $\mathbb{E}a7$ 27. $\mathbb{W}e5\#$ $\mathbb{E}b7$
 28. $\mathbb{W}b5$ and White soon wins.

22. $\mathbb{E}d6$ $\mathbb{E}c7$ 23. $\mathbb{W}g8\#$ $\mathbb{E}b7$ 24. $\mathbb{W}g2\#?!$

White should play 24. $\mathbb{W}d5\#$ $\mathbb{E}b8$ 25. $\mathbb{W}e5?!$ and now:

a) 25... $\mathbb{E}b7$ 26. $\mathbb{W}b5\#$ $\mathbb{E}c8$ 27. $\mathbb{W}a5!$ Mate is near.

b) 25... $\mathbb{E}b7$ 26. $\mathbb{W}c6\#$ White wins as in Diagram
 24-3: 26... $\mathbb{E}a7$ 27. $\mathbb{W}a1\#$ $\mathbb{E}b8$ 28. $\mathbb{W}a5\#$

24... $\mathbb{E}b8$ 25. $\mathbb{W}b2\#$ $\mathbb{E}c8$ 26. $\mathbb{W}b6?$

This makes the win harder.

The correct way is 26. $\mathbb{W}b5$ $\mathbb{E}g7$ 27. $\mathbb{W}e8\#$ $\mathbb{E}b7$
 28. $\mathbb{W}e4\#$ $\mathbb{E}b8$ 29. $\mathbb{W}c6$ $\mathbb{E}b7$ 30. $\mathbb{W}e5\#$ and once again
 White wins as in Diagram 24-3.

26... $\mathbb{E}d7\#$ 27. $\mathbb{W}c6??$

Pressed for time, White allows the typical stalemate
 defence.

Pamplona 2006

In the diagram position, White has just played 1. $\mathbb{Q}g4-f3??$, throwing away the win. Withdrawing the queen before bringing in his king would have won quickly. For example: 1. $\mathbb{W}e5!$ (other sensible queen moves are also winning) 1... $\mathbb{Q}g1$ 2. $\mathbb{Q}g3$ $\mathbb{E}g2\#$ 3. $\mathbb{Q}h3+-$ 1... $\mathbb{E}f2\#$!

ARTUR YUSUPOV

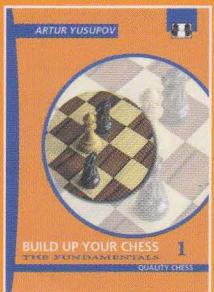

Artur Yusupov was ranked No. 3 in the world from 1986 to 1992, just behind the legendary Karpov and Kasparov. He has won everything there is to win in chess except for the World Championship. In recent years he has mainly worked as a chess trainer with players ranging from current World Champion Anand to local amateurs in Germany, where he resides.

Winner of the Boleslavsky Medal from FIDE (the World Chess Federation) as the best instructional chess books in the world (ahead of Garry Kasparov and Mark Dvoretsky in 2nd and 3rd place).

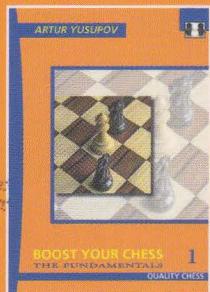

CHESS EVOLUTION THE FUNDAMENTALS

CHESS EVOLUTION 1 concludes Artur Yusupov's Fundamentals series, helping players to build their skills on solid foundations. Yusupov guides the reader towards a higher level of chess understanding using carefully selected positions and advice. This new understanding is then tested by a series of puzzles.
