Preface

It was a pleasure to have Artur Yusupov working as my second, both personally and professionally. It is therefore an honour for me to write the preface to this series of books.

This book was created by expanding and improving the original online lessons from the Chess Tigers University. As an honorary member of the Chess Tigers, it has given me great pleasure to see this logical follow-up take concrete form and meet the twin challenges of being both a valuable textbook and a bedside book.

It was in 1994 that I met Artur Yusupov in the semi-finals of the Candidates' cycle in Wijk aan Zee. I managed to come out ahead by 4.5–2.5, but I recognized that Artur harboured great potential, both in his chess knowledge and extensive match experience.

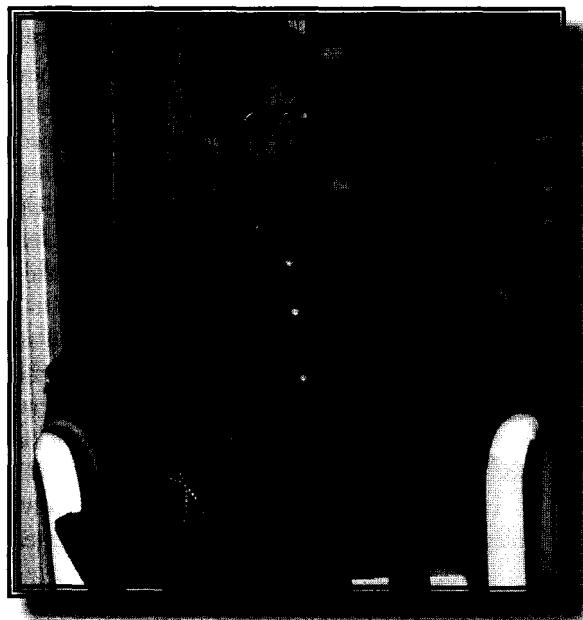

Artur's systematic and professional approach to analysing games was the decisive factor in having him as my second in the World Championship Finals in New York 1995 and Lausanne 1998. His mastery of the methods of the Russian chess school was very helpful in the preparation for the matches, as well as during the matches themselves. It was his idea that I should play the Trompovsky in the last game in Lausanne. I was 3–2 down, but was able to level the match at 3–3 and thus force a play-off.

I am still very grateful for everything that Artur did for me.

Artur's vast experience as a trainer convinced him that there is a considerable need for better tuition for amateurs. Matching the level to the needs of the student is perhaps not too difficult, but the masterstroke is structuring the information in such a way that makes it immediately useful for amateurs. I am naturally enthusiastic about the rich variety of material in this series, which can help beginners become top amateurs.

I wish Artur Yusupov all the best with the publication of this series of books. Making this work available in English means that even more people who are keen to learn can enjoy it to the full.

World Champion, Viswanathan Anand

Introduction

During my many years of work as a chess trainer, I have noticed that there are only a few books which are really suitable for most amateur players. Some good books treat individual aspects of the game (middlegame or endgame, tactics or positional play) without paying any real heed to the readers' playing levels. This brought about the idea of working out a teaching programme aimed specifically at a certain playing strength. Such teaching programmes, in a brief form and intended as systematic help for trainers, are common only in Russia, where they are very popular. One very well known and much valued example is a publication by Golenishev, which inspired some aspects of my methodology.

In 2003 I began a 3 year training programme in my chess academy. Three groups were set up according to playing strength: under Elo 1500, under Elo 1800 and under Elo 2100. Each annual stage consisted of 24 teaching modules and 24 tests, plus a final test at the end of the course.

This programme was later taken over, in a different form, by the Chess Tigers University and is still being used there.

The overwhelmingly positive comments of my students encouraged me to rework this programme in the form of a series of books. In doing so, I was able to make use of many evaluations, corrections and suggestions from my students. While I was redrafting, especially the explanations in the solutions, that feedback from my students was very valuable.

This book is the second volume in a series of manuals designed for players who are building the foundations of their chess knowledge. The reader will receive the necessary basic knowledge in six areas of the game – tactics, positional play, strategy, the calculation of variations, the opening and the endgame.

The reader will benefit from the methodical build-up in this book, even if some of the material is familiar, as it will close any possible gaps in his chess knowledge and thus construct solid foundations for future success. To make the book entertaining and varied, I have mixed up these different areas, but you can always see from the header to which area any particular chapter belongs.

At this point I must emphasize that just working with this book does not guarantee a rise in your rating. It simply gives you a solid basis for a leap forward in chess ability. You should also play in tournaments, analyse your own games, play through well-annotated games of stronger players and read books on chess (I have included some suggestions at the end of this book).

I have also been concerned with another problem area since I moved to Germany: the role of trainers in chess education. In Germany there are unfortunately too few qualified trainers. There is also a widespread opinion that a talented chess player does not need a trainer. I do not share that opinion. I believe that many talented German chess players could develop much further, if they had support at the correct time and if they had not left gaps in their learning.

Chess is a complicated sport, which has to be studied for many years. It is hard to imagine any other sport without coaches. (Is there a single athletics club or football club that does not have a trainer?) This manual is intended for the many club players who unfortunately receive no support in attempting to master our complicated sport. In this way it is intended as a substitute for a trainer for those that have none (and a support for trainers), but not an equal replacement for a trainer.

I further believe that many chess lovers, who show great commitment to working with young players in chess clubs, will gain with this series of books (as well as with the programme of the

Chess Tigers University) important methodological support and high quality training material for their chess lessons. The students will certainly profit from the supplementary explanations given by trainers and from lively discussions about the themes in the books.

How to work with this book

First read through the lessons. **You absolutely must play through all the examples and all the variations on a chessboard.**

First think about every diagram position (for at least 5 minutes) and try to find the solutions on your own. On average, you will need 1 to 2 hours per lesson. However, there is no time limit; some students may need more time for specific lessons.

It is important to have a good understanding of the subject.

The second part of the lesson is a test with 12 positions. The stars near the number of each exercise indicate the level of difficulty and, at the same time, the maximum number of points which you can earn for the correct solution with all necessary variations ($\star = 1$ point). Try to solve the positions without moving the pieces! If you cannot solve the position straight away, you must try for a second time for approximately 10 minutes. This time you may move the pieces. You must look for new ideas.

On absolutely no account may you get help from a computer!

Normally you will also need 1 to 2 hours for each test. Try to solve all the exercises. Consider each position as though it were appearing in one of your own games and look for the best possible continuation. You do not always have to mate or win quickly. It is sometimes enough to suggest a good move. Especially in the lessons on the opening, it is more important for you to reflect on the position, take a decision and then carefully play through the solutions. This will help you better understand the ideas of the opening. Mistakes are part of the learning process!

It is very important to write down all the necessary variations. If you do this you will be able to compare your solution with the one given in the book and you can also see how well you have understood the particular subject. If your score is too low, we recommend that you work through the chapter again. **We also recommend that you play through the solutions, including all the variations, on a chessboard.**

You will find an explanation of the standard chess symbols used in this book on page 4.

At this point I should like to express my gratitude to a large number of people who have supported my work in various ways. There is firstly my wife Nadja for the design of the German edition book and her help in working through the solutions, my daughter Katja for many corrections to my German, my chess trainer Mark Dvoretsky, from whose training methods I have learned so much, the Chess Tigers and Hans-Walter Schmitt for their constructive and productive cooperation, Mike Rosa for correcting some mistakes, Reinhold from Schwerin for his proofreading, and finally to Semen Oxman and Oleg Aizman, who gave valuable advice concerning the design of the book.

I would also like to thank Augusto Caruso for his elaboration of Nadja's design for the English edition and Ian Adams for translating the book.

Attacking the king in the centre

In the opening, one of the most important tasks for a player (along with quick development and the struggle for the centre) is to **secure the position of his king**. Anyone who goes against this principle, either by choice or because he is forced to do so, will have to expect an energetic attack to be mounted against his insufficiently well protected king. Players are often ready to make material sacrifices (usually one or two pawns, but sometimes even a minor piece) in order to prevent castling and keep the opposing king in the centre.

White wants to provoke the move ...a6, after which the pawns on the queenside are slightly weakened. This move was originally tried by Furman in a game against Geller, and later used by Fischer to beat Spassky in a classic game. But Geller prepared a powerful idea for Black.

14...Qb7!

Black unpins his c-pawn and threatens ...c4.

14...a6 15.dxc5 bxc5 16.0–0 Qa7 17.Qe2 Qd7

Diagram 1-2

The point behind the 14th move. Black will prevent his opponent from castling.

18.Qxa6

18.Qc6 is followed by 18...Qxc6 19.Qxc6 Qb8! (not so good is 19...Qc8 20.Qa4!) and Black will win the

b2-pawn and retain the initiative on the queenside. If now 20.b3?? then 20... $\mathbb{E}c8+$.

18... $\mathbb{W}xa6$

Threatening 19... $\mathbb{E}c8$.

19. $\mathbb{W}a3$ $\mathbb{W}c4$ 20. $\mathbb{Q}d2$

White hopes that his king will be safe even in the centre (for example, after 20... $\mathbb{E}c8$ 21. $\mathbb{Q}d4$), since it controls some important squares. But Geller demonstrates how such positions have to be played. He gives his opponent no peace, attacking on the kingside too and aiming to open up the game.

Note that 20. $\mathbb{W}c3$ is answered by 20... $\mathbb{E}b8!?$.

20... $\mathbb{W}g4!$ 21. $\mathbb{E}g1$

Diagram 1-3

21... $\mathbb{d}4!$

The d5-pawn was just blocking its own pieces.

22. $\mathbb{Q}xd4$

22.exd4 can be met by either 22... $\mathbb{Q}d5$ or 22... $\mathbb{E}c8!?$.

22... $\mathbb{W}h4$ 23. $\mathbb{E}e1$

Neither 23. $\mathbb{E}f1$ $\mathbb{Q}c4$ nor 23. $\mathbb{E}e2$ $\mathbb{Q}c4\#$ is any better.

23... $\mathbb{W}xf2\#$ 24. $\mathbb{E}e2$ $\mathbb{W}f1$ 25. $\mathbb{Q}xe6$

White is hoping with this exchange to reduce his opponent's attacking potential. But even with just the two major pieces, Black will manage to attack the king down the open files.

25...fxe6 26. $\mathbb{W}d6$

Diagram 1-4

26... $\mathbb{Q}h8!$

A useful move, protecting the king from checks. White cannot activate his rook.

27.e4 $\mathbb{E}c8$

"It is very difficult to defend such positions." – Geller.

28. $\mathbb{Q}e3$ $\mathbb{E}f8$

Intending ... $\mathbb{W}g1\#$ followed by ... $\mathbb{E}f1$.

29. $\mathbb{Q}d2$

White attempts to coordinate his pieces. However, either 29. $\mathbb{Q}d2!?$ or 29.e5! would be a slight improvement.

Diagram 1-5

29...e5! 30. $\mathbb{W}xe5?$

A mistake in a very difficult position – the white queen should not leave the d-file.

Tactics 1

But White does not have any useful moves, for example: 30.a3 $\mathbb{W}f4\#$ 31. $\mathbb{Q}d3$ a5 (or 31... $\mathbb{E}c8$) 32. $\mathbb{Q}c2$ $\mathbb{W}f1\#$ 33. $\mathbb{Q}e3$ a4#

30... $\mathbb{W}e1\#$ 31. $\mathbb{E}e2$

31. $\mathbb{Q}d3$ loses to 31... $\mathbb{E}d8\#$.

31... $\mathbb{W}g1\#$ 32. $\mathbb{Q}d3$ $\mathbb{E}d8\#$ 33. $\mathbb{Q}c3$ $\mathbb{W}d1-$

The coordinated attack down the d-file decides the game.

34. $\mathbb{W}b5$ $\mathbb{W}d4\#$ 35. $\mathbb{Q}c2$

Or 35. $\mathbb{Q}b3$ a6! 36. $\mathbb{W}a5$ $\mathbb{W}d3\#$ 37. $\mathbb{Q}a4$ $\mathbb{E}d4\#$ 38.b4 $\mathbb{W}d1\#$ 39. $\mathbb{Q}a3$ $\mathbb{E}d3\#$ 40. $\mathbb{Q}b2$ $\mathbb{W}xe2\#$ -.

This is a modern variation. The main alternatives are 8...b4 and the very popular 8...a6.

9.e4 b4

This is the idea behind 8... $\mathbb{Q}b7$. Now the white knight must go to a slightly passive position.

10. $\mathbb{Q}a4$ c5

Black must attack the white centre immediately.

11.e5 $\mathbb{Q}d5$ 12.0–0

12.dxc5 is an important alternative.

12...cx d 4

Diagram 1-6

13. $\mathbb{E}e1$

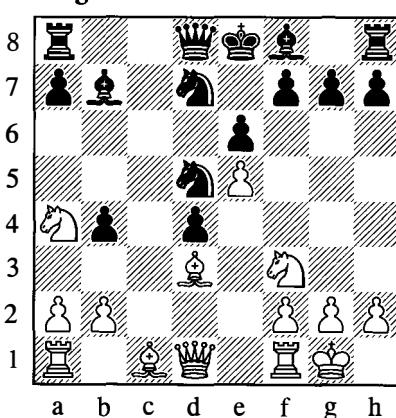

13. $\mathbb{Q}xd4$ is a dangerous pawn sacrifice. But here too, experts in the Meran System have found a good defence: 13... $\mathbb{Q}xe5$ 14. $\mathbb{Q}b5\#$ $\mathbb{Q}d7$ 15. $\mathbb{E}e1$ $\mathbb{E}c8$! 16. $\mathbb{W}h5$ g6 17. $\mathbb{W}e2$, and here Black can hold the position with 17...a6!.

13...g6

Black wants to attack the e5-pawn.

An interesting alternative is 13... $\mathbb{Q}e7$ 14. $\mathbb{Q}xd4$ 0–0 and if 15. $\mathbb{W}h5$ g6 16. $\mathbb{W}h6$, then 16... $\mathbb{Q}xe5$! 17. $\mathbb{E}xe5$ $\mathbb{Q}f6$ 18. $\mathbb{W}f4$ $\mathbb{Q}d6$ 19. $\mathbb{W}g3$ $\mathbb{Q}d7$ 20. $\mathbb{Q}f4$ $\mathbb{W}f6$ 21. $\mathbb{Q}e4$ $\mathbb{Q}xe5$ 22. $\mathbb{Q}xe5$ $\mathbb{Q}xe5$ 23. $\mathbb{Q}xb7$ $\mathbb{E}ad8$ and Black had sufficient compensation for the small material deficit in Dyachkov – Dreev, Smolensk 2000.

15...♝a6

15...♝c6? 16.♗c4 ♛xa4 would be bad, on account of 17.b3 ♛b5 18.♗d6† and White wins the queen.

Diagram 1-7

18.♛xd4!

This piece sacrifice did not come as a surprise to my opponent. However, he could no longer remember the theory and had to work it all out, which cost him quite a lot of time and energy.

18...♛xa4

If 18...0–0, then 19.♗b3, Kozul – Borovikov, Bled 2000, and White has a slight advantage.

18...h6 is followed by 19.♗xd5 ♛xd5 20.♗xd5 exd5 21.♗e3± (L.B.Hansen).

19.♗xd5 exd5 20.♗xd5 ♕b6

We can see White's idea. He only gets two pawns for his piece, but he prevents Black from castling on either side.

23.♗c3

An interesting alternative is 23.♗h4? with a strong attack, Dreev – Harikrishna, Khanty-Mansiysk 2005.

23...♛e6?

A fatal error. 23...♛c8! is correct; after 24.♗f3 ♛g7 25.e6? Black could finally get his king out of danger. The small loss of material is not so important: 25...0–0 26.♗e7 fxe6! 27.♗xf8 ♛xf8 28.♗b3!=

24...♜g8

24...♜c8 would be no better, because of 25.♛a5±.

25.♝ad1 ♜e7

Since the black rook on g8 will not be joining the play in the foreseeable future, White has, for practical purposes, a material advantage!

Diagram 1-10

26.♝d6!

This is how the blockade of the e-pawn is broken. If White can open up lines against the king, the game will soon be over.

26...♛c8

If 26...♛c4, then 27.♛f3 wins; the threat is simply 28.♝xe7 ♜xe7 29.♛f6† and then 30.e6.

Of course 26...♝xd6? loses the queen to 27.exd6.

27.♝c6 ♛d8 28.♝c7!

Here White has various ways to reach his goal. 28.♝xe7! is not bad either: ♜xe7 (28...♝xe7 29.e6 f5 30.♝xb6!+) 29.♝c7† ♜f8 30.e6!+–

28...♝d5

White now wins by force, but the alternatives were also hopeless:

In the test which follows please try to seize the fleeting opportunity to attack the opposing king in the centre. Consider the most active moves first. Look for a way through to the opposing king by opening up the position. Try to exploit all the tactical nuances of the position (e.g. unprotected pieces) in order to link them to the direct attack on the king.

Realizing an advantage

In this chapter we shall deal with the most important principles for realizing an advantage. (See also *Boost Your Chess 2*, Chapter 20.)

The correct psychological attitude

If we have an advantage, we must **raise our level of concentration**. If we can solve the next problems to arise, then the game may come to a quick end and we will not have to make any further effort!

Technique

1) Do not allow any counterplay

The most important principle! You can often (but unfortunately not always) control the game when you have a better position and deprive your opponent of his final chances of becoming active. When you have the better position you don't want to allow him any counterplay.

2) Do not hurry

This principle comes into play when the opponent has no counterplay left. The first thing to do is to improve your position as much as possible (or to make your opponent's position worse) and only then turn to making active changes in the position.

If your opponent does have some ideas to improve his position, or if by chance you see an opportunity, then you have to hurry!

3) The principle of two weaknesses

This is an important strategic concept. If your opponent has one weakness, then normally he will be able to protect it sufficiently well. But you can break down his defence by provoking a fresh weakness, as far away as possible from the first one. You then attack the two weaknesses turn about and the attacking side's superior lines of communication will play a decisive role.

4) Capablanca's principle – the correct exchanges

You should retain only those pieces (or pawns!)

which you require to win the game! You should try to swap off any superfluous pieces. A perfectly played positional game is finished off with a won ending.

There is a rule of thumb: the side with the advantage in material strives to exchange pieces, the side which is behind tries to swap off pawns!

The following examples will illustrate these principles of technique.

A.Yusupov – L.Christiansen

Las Palmas 1993

1.d4 d6 2.e4 ♜f6 3.f3 e5 4.dxe5

After the exchange of queens White obtains a small, but safe, advantage.

4...dxe5 5.♘xd8† ♘xd8 6.♗c4 ♜e6?!

This exchange damages the pawn structure. 6...♜e8?! would be better, or even 6...♜e7?! preparing ...♜e6 (Rivas).

7.♗xe6 fxe6

Diagram 2-1

8.♘h3?±

The first goal is to attack the weakness on e5. For that reason, the white knight wants to go to d3.

8...♗c5 9.♘f2 ♗xf2† 10.♔xf2?±

This exchange is also good for White, because his dark-squared bishop will be slightly stronger than the opposing knight.

10...♗c6

10...♗bd7?!

11.♗e3 ♜e7

Diagram 2-2

12.♘a3?!

White retains various options for the knight: b5, c4 or (after c2-c3) the c2-square.

12...a6 13.c3 ♜hd8

The more active 13...♜ag8?± (Δ...g5) might be a better attempt to create some worries for White.

14.♗e2 h6?!

Black is just weakening his position with pawn moves.

If 14...b5, then 15.♗c2?±.

15.♗c2 ♜d7

Diagram 2-1

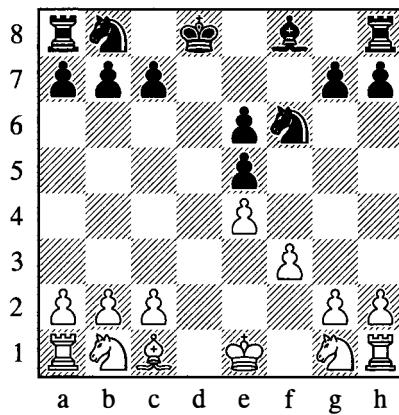

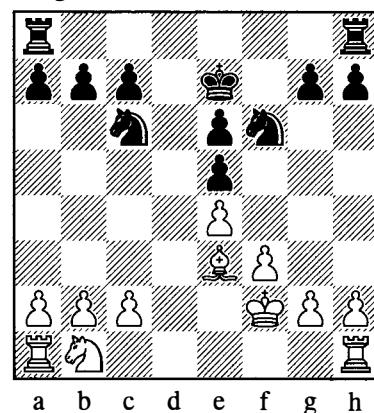

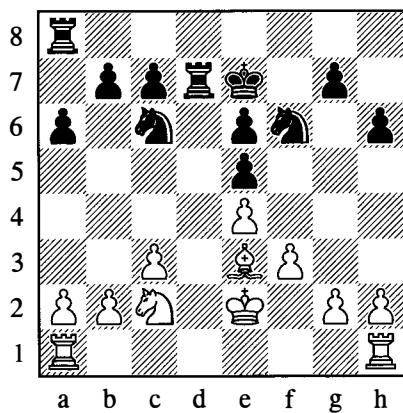

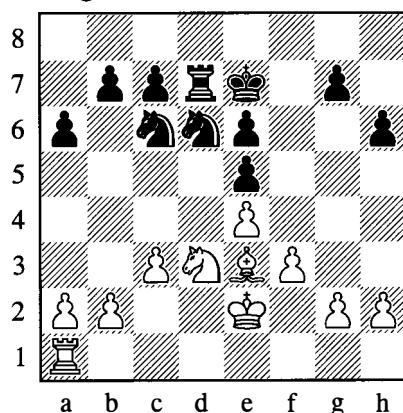

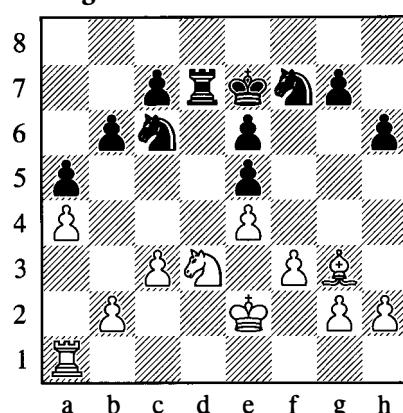

Diagram 2-2

Positional play 1

Diagram 2-3**Diagram 2-4****Diagram 2-5****Diagram 2-3**

The main problem in the position is the question of exchanging. What shall we do with the open file: should we exchange all the rooks on it, should we avoid exchanges or should we exchange only one pair of rooks?

16.♖hd1

The correct answer is to exchange one pair of rooks, in order to reduce any possible counterplay. White needs to keep one rook to prepare his own active operations.

16...♜ad8

If 16...♜xd1 17.♜xd1 ♜d8, then 18.♗g1!± is correct.

17.♝xd7† ♜xd7

17...♛xd7?!

18.♞e1!

White regroups his pieces in order to attack the e5-pawn. In doing so, White wants to tie the black knight down on c6, where it is not so well placed and where it can later become a target (after b4, a4 and b4-b5).

18...♝e8

18...♝d8? 19.♝d3 ♜f7 20.♝c5±

19.♝d3 ♜d6

Diagram 2-4

20.♝f2!

The position of the bishop is also improved; it goes to g3, to exert even more pressure on e5.

20...b6?!

Black wants to protect the c5-square, but once more he weakens his own position with the pawn move.

21.♝g3 ♜f7

Better is 21...♝f6.

22.a4 a5

White needs a second weakness to attack. It now makes sense to play on the queenside.

The over-hasty 23.b4? gives the opponent counterplay: 23...axb4 24.cxb4 ♜d4†

23...♝f6 24.b4 ♜d8

24...axb4 25.cxb4 ♜d4† is no longer dangerous; after 26.♛e3 c6 27.a5 White is clearly better. For example: 27...bxa5 28.bxa5 ♜a7 29.♜xe5! ♜xe5 30.♜xe5 ♜xe5 31.♜c5†+–

25.b5 ♜e7

Preparing c4-c5. Once more White must pay attention. The immediate 26.c4 allows counter-chances after 26...c5! 27.bxc6 ♜xc6.

26...♜b8

After 26...♜b8 White continues 27.c4 c5 28.bxc6 ♜xc6 29.c5 bxc5 30.♜xc5 ♜xc5 31.♜xc5 ♜c6 32.♜b7+– and Black cannot protect the a5-pawn often enough.

27.c4 c5

Diagram 2-7

28.♜xc5?!

The sacrifice on c5 is very tempting. Unfortunately White spotted his opponent's defensive idea too late and gave up the wrong piece. 28.♜xc5! would have been even better: 28...bxc5 29.♜xc5+–

28...bxc5 29.♜xc5 ♜d8?!

There is no hope after 29...♜c8 30.♜b6 ♜d6 31.c5+–.

29...♜b7 is simply met by 30.♜a3±.

30.♜d6 ♜b7 31.♜d1!

It was only here that I understood that Black wants to return the piece. 31.c5?! is answered by 31...♜ec6∞, and the white bishop on d6 finds itself offside.

31...♜dc6? 32.bxc6 ♜xc6 33.♜c5

Now the bishop can join the play again. But the mistake on move 28 has given Black good defensive chances.

33...♝b2† 34.♝d2 ♜b3 35.♝d6 ♜e7?

Black misses his chance. 35...♜d4†? is correct: 36.♜xd4 exd4 37.♜xd4 (37.♜a6?±) 37...♜b4±

36.♜b6 ♜g6

Diagram 2-8

37.♜xa5

White calculated a long variation and decided to force matters. His passed pawns will be too dangerous. After the technical 37.g3? Black could still reply 37...♜b4.

A.Yusupov – J.Hall

Bundesliga 1999

White is better. He controls the a-file and has an advantage in space. Black has the b6-pawn as a weakness, but it is hard to attack and relatively easy to defend. Despite that, it is worth first forcing your opponent onto the defensive and tying down some of his pieces.

46. $\mathbb{Q}f1!$

46... $\mathbb{E}e8$ 47. $\mathbb{Q}d2$ $\mathbb{Q}c8$ 48. $\mathbb{Q}c4$ $\mathbb{E}f8$

In order to make progress, White must undertake something on the kingside (the principle of two weaknesses). Since Black has absolutely no counterplay, White manoeuvres for quite a long time, aiming to first bring his pieces to their optimal positions. These waiting tactics are rather unpleasant for his opponent.

49. $\mathbb{Q}d2$ $\mathbb{E}e8$ 50. $\mathbb{Q}g3$ $\mathbb{E}d8$ 51. $\mathbb{E}a8$ $\mathbb{E}b8$ 52. $\mathbb{E}8a4$

27. $\mathbb{W}f4!$

31. $f4$ $\mathbb{A}e7$ 32. $g4$ $\mathbb{A}h4$ 33. $f5!$

33. $\mathbb{W}h7$ is not so good: 33... $\mathbb{W}c6$ 34. $\mathbb{W}g8\uparrow$ $\mathbb{A}e7$ 35. $\mathbb{W}xg7$ $\mathbb{W}g2\uparrow$ =

Or if 33. $g5$ $\mathbb{W}xg5$ 34. $fxg5$, then 34... $\mathbb{A}g3$.

White could strengthen his position even further with 33. $\mathbb{A}d2?!$ followed by $\mathbb{A}c3$, but Geller decided on a typical endgame strategy: extending the sphere of operations.

33. $\mathbb{A}g3$ 34. $fxe6$ $fxe6$ 35. $\mathbb{W}g6\uparrow$ $\mathbb{A}f8$ 36. $\mathbb{W}xe6$ $\mathbb{A}xe5$ 37. $\mathbb{A}d3!$ $\mathbb{A}g3$ 38. $\mathbb{A}e4$ $\mathbb{A}h2$

40. $\mathbb{A}g6$ would be even simpler: 40... $\mathbb{W}d6$ 41. $\mathbb{A}xc5+-$

40... $\mathbb{A}h2$

40... $\mathbb{W}f7\uparrow$ 41. $\mathbb{W}xf7\uparrow$ $\mathbb{A}xf7$ also loses, on account of 42. $\mathbb{A}c3$ $\mathbb{A}h4$ 43. $\mathbb{A}e5$ and then $\mathbb{A}e4-d5$.

41. $\mathbb{A}c3$ $\mathbb{W}f7\uparrow$

White brings his pieces into the game and still can put up a tough resistance.

I prefer Karpov's solution. After the positional sacrifice of the d-pawn, the opponent soon runs out of breathing space.

- ✓ Working things out for your opponent
- ✓ Calculating short variations

Diagram 3-1**Diagram 3-2****Counterplay**

When you are calculating variations, it is very important not just to consider things from your own point of view; you must work things out for your opponent too. He or she is also taking part in the game!

Many players find outstanding tactical ideas for themselves, but often overlook much simpler ideas for their opponent. In order to get an objective picture of the position on the board, we must also look for the best moves for our opponent – and we have to work just as hard at doing that as when we look for our own moves.

It is very important to improve your calculation of short variations. We have to concentrate hard during the very first moves of a variation, because it is there that a lot of mistakes are made. Paying attention to your opponent's ideas is, of course, enormously helpful in this respect. What is the good of working out a long variation, if we don't see our opponent's reply on the first move?

9.♗xd7†??

A difficult decision. White has a tempting alternative: 9.♕c6 ♜a7 (9...♝c8? 10.♗b7+) 10.♗e4 ♜c7 (10...♝e7? 11.0–0+) 11.♗xf6† gxf6 12.♗xf6 ♜g8 13.♗xd7† ♜xd7 14.0–0

Diagram 3-3

But in this position Black has a counter-stroke: 14...♝xg2†!! (14...♝h3? 15.♗e1 ♜xg2? 16.♗xg2 ♜h3 17.♗d5!+) 15.♗xg2 ♜h3† 16.♗h1 ♜xf1 17.♗xf1 ♜f5±

These calculations cost a lot of energy. But they also show that White took his opponent's chances very seriously. The routine move played in the game is, of course, not bad.

9...♝xd7 10.♗d5!

White now makes a slight error. It was clearly better to first play 10.♗xf6! ♜xf6, and only then 11.♗d5 ♜d8 12.♗d2, followed by 13.0–0–0±. Compared to the game, the black bishop on f8 remains undeveloped.

10...♝e7 11.♗xf6 ♜xf6 12.♗xf6† ♜xf6 13.♗d5 ♜e7??

White underestimated this resource, after which the d6-pawn is well defended. White was only anticipating 13...0–0? 14.0–0–0± or 13...♝d8?! 14.0–0–0 ♜e7±.

14.0–0–0 ♜ac8!

14...♝hd8? is followed by 15.♗g5! and ♜e4±.

Black now wants to play 15...♝c6. White must react very energetically in order to retain the initiative.

48...Qf2†!

Black chooses a simple solution. The tempting alternative 48...h5†? 49.Qxg5 Qf6† 50.Qxh5 Qe5 would not lead to mate, but instead to the loss of the game after the surprising defence 51.Qd6!!+–.

49.Qf5

20...Qxh3?

20...Qg7! is correct: 21.Qe5 Qc6±

On the other hand, 20... $\mathbb{Q}h7?$ is not good, because of 21. $\mathbb{E}e5$ $\mathbb{Q}c6$ 22. $\mathbb{E}h5!+-$.

21. $\mathbb{W}xh6$ $\mathbb{W}g3$ 22. $\mathbb{W}xh3$ $\mathbb{W}xf2\#$

24. $\mathbb{E}f1!$ $\mathbb{W}xc2$ 25. $\mathbb{Q}g5$ $\mathbb{Q}f2$

25... $\mathbb{E}h8$ is followed by 26. $\mathbb{E}xf7\#$ $\mathbb{Q}g8$ 27. $\mathbb{E}h7\#$ +-.

26. $\mathbb{W}h7\#$ $\mathbb{Q}f6$ 27. $\mathbb{W}h4$ $\mathbb{E}h8$ 28. $\mathbb{E}xf2\#$!

Diagram 3-8

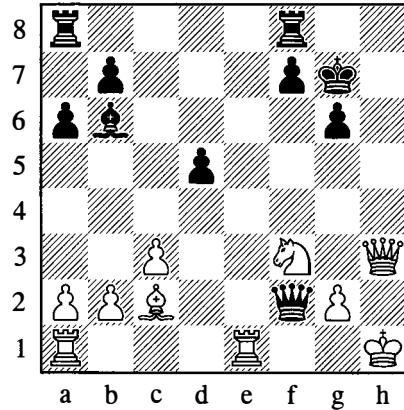

Diagram 3-9

S.Gligoric – L.Stein

Moscow 1967

26. $\mathbb{Q}h1?$

White has a very good idea. After 26... $fxg2\#$ he will sacrifice the exchange and attack down the g-file. Unfortunately he overlooked his opponent's very first move!

26. $h4!$? (preparing $\mathbb{Q}h2$) is not very clear: 26... $fxg2$ 27. $\mathbb{Q}h2$ $\mathbb{Q}h7$ 28. $\mathbb{E}gl$ (28. $\mathbb{E}xg2$ $\mathbb{Q}xg2$ 29. $\mathbb{W}g5$ $\mathbb{Q}g8\infty$) 28... $\mathbb{E}g8$ 29. $\mathbb{E}xg2$ $\mathbb{Q}f6\#$

The modest 26. $\mathbb{Q}f1!$ is better: 26... $\mathbb{W}a6\#$ (26... $fxg2\#$ 27. $\mathbb{E}xg2$ $\mathbb{Q}xg2$ 28. $\mathbb{Q}xg2\#$) 27. $\mathbb{Q}g1$ $\mathbb{W}a7=$

26... $\mathbb{W}xf2!$

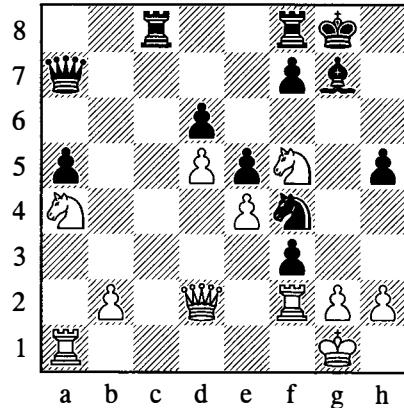

This 'exchange of queens' was, of course, not planned!

27. $\mathbb{W}xf2$ $fxg2\#$ 28. $\mathbb{W}xg2$ $\mathbb{Q}xg2$ 29. $\mathbb{Q}xg2$ $\mathbb{E}c2\#$ +

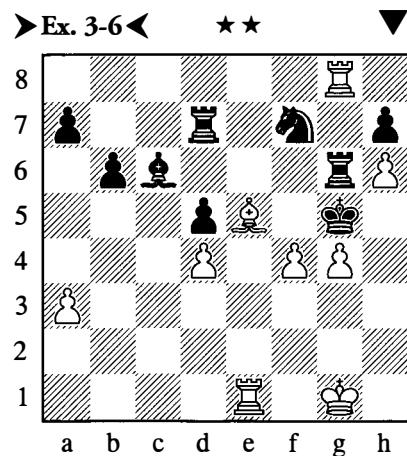

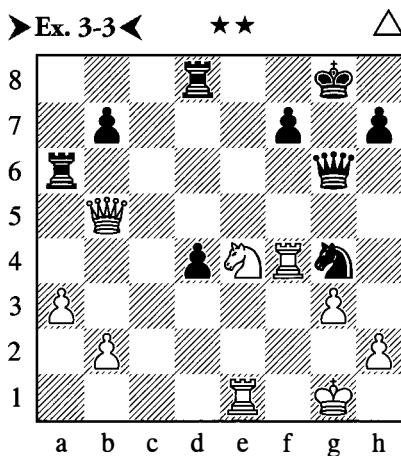

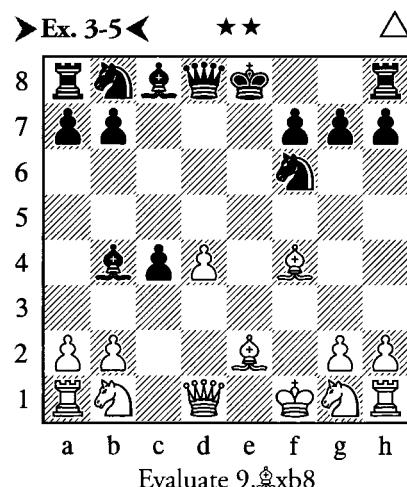

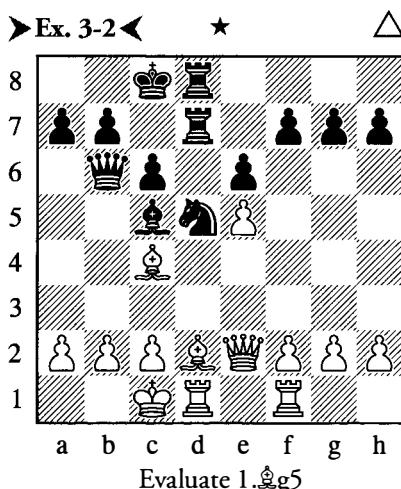

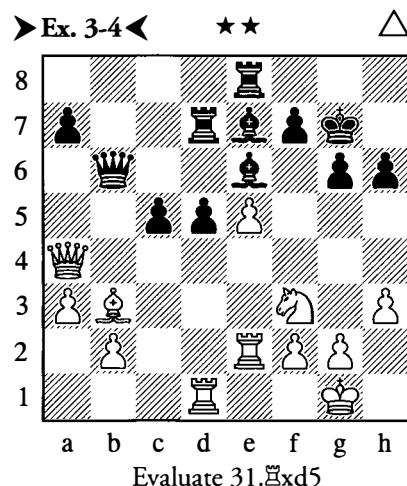

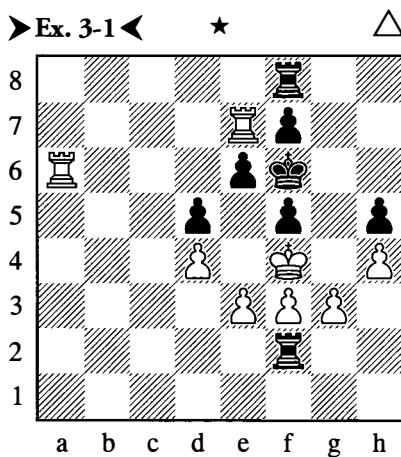

In the endgame, White has no compensation for the exchange.

In the test, try to spot the opponent's possibilities in good time. Look above all for active moves for your opponent. Check out your opponent's replies.

Knight endings

Elementary endgames

There is a lot of theory connected with the elementary endgames with knight and pawn against knight, but it is not absolutely necessary to know this for practical play. We shall limit ourselves to a single example. In doing so, we shall concentrate on two typical methods which often occur in such endings: **the deflecting knight sacrifice and getting rid of the blockade**.

Diagram 4-1

A.Yusupov – L.Vogt

Altensteig 1993

Here the two isolated passed pawns are stronger than the connected but blockaded pawns.

 53. $\mathbb{Q}e6$ $\mathbb{Q}g5\#$ 54. $\mathbb{Q}e7$ c4 55. $\mathbb{Q}d8$ $\mathbb{Q}b7$
 55...c3 56. $\mathbb{Q}xc3$ $\mathbb{Q}xb6$ 57. $\mathbb{Q}e7$ $\mathbb{Q}c6$ 58. $\mathbb{Q}e4$ $\mathbb{Q}f3$
 59. $\mathbb{Q}xd6$ (59.f7 $\mathbb{Q}e5=$) 59... $\mathbb{Q}d5!=$ also draws.
56. $\mathbb{Q}d7$ c3?!
 56... $\mathbb{Q}f7$ is simpler: 57. $\mathbb{Q}e6$ $\mathbb{Q}g5\#$ 58. $\mathbb{Q}xd6$ $\mathbb{Q}e4\#$
 59. $\mathbb{Q}e5$ $\mathbb{Q}xf6$ 60. $\mathbb{Q}xf6$ c3=
57. $\mathbb{Q}xc3$ $\mathbb{Q}xb6$ 58. $\mathbb{Q}xd6$

Diagram 4-2

Here we have rather a complicated ending. Since the black king is not in front of the pawn, all Black's hopes are based on the knight. Nevertheless, it is important to have the king in a good position.

58... $\mathbb{Q}f7\#$?

In time trouble, both players lose the thread and repeat moves. 58... $\mathbb{Q}b7!$ is correct: 59. $\mathbb{Q}e7$ $\mathbb{Q}c6!$ and if 60. $\mathbb{Q}e4$, then 60... $\mathbb{Q}f3!$ 61. f7 (or 61. $\mathbb{Q}e6$ $\mathbb{Q}d4\#$). 61... $\mathbb{Q}e5$ 62. f8 \mathbb{Q} $\mathbb{Q}g6\#$ =.

59. $\mathbb{Q}e6?$

Better is 59. $\mathbb{Q}e7!+-$.

59... $\mathbb{Q}g5\#$ 60. $\mathbb{Q}d6$

60. $\mathbb{Q}e7$ $\mathbb{Q}c6!$ draws, as we have already noted.

60... $\mathbb{Q}f7\#$?

As mentioned above, 60... $\mathbb{Q}b7!$ is the way to draw.

61. $\mathbb{Q}e7!$ $\mathbb{Q}e5$

The following variation shows the important difference which results from the black king being on

Endgame 1

More complicated endings

Botvinnik compared knight endings to pawn endings. In fact, many of their characteristics are almost identical: an active king or an outside passed pawn brings a clear advantage in both types of ending.

Despite that, knight endings are noticeably harder to play. The defending side has more chances of success, even if the opponent has an advantage in material.

In order to get a better understanding of typical play in knight endings, we shall consider two examples.

Diagram 4-6

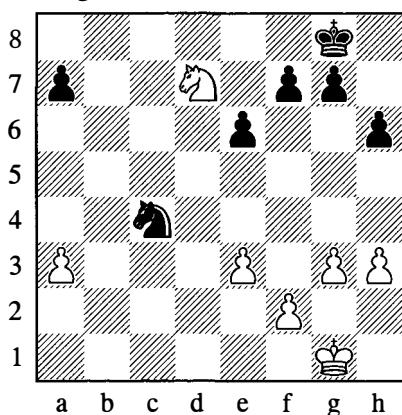

Diagram 4-7

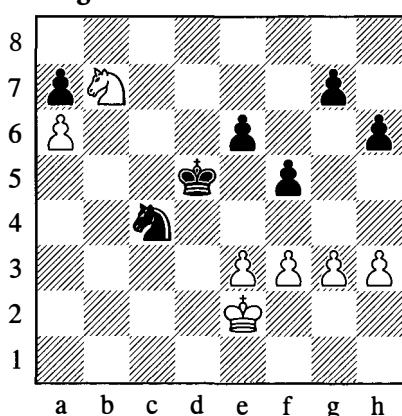

Diagram 4-6

A.Yusupov – V.Ivanchuk

Linares 1991

In spite of the material equality, White faces some serious difficulties. His a-pawn has to advance a long way and this makes it very weak. And the black king becomes much more active than its counterpart.

32.a4 ♜b2!

If 32...f6, then 33.♗b8! ♜a5 (33...♝f7 34.♝f1 ♜e8 35.♝e2 a5 36.♝d3 ♜b2† 37.♝e2! ♜xa4 38.♝c6=) 34.♝f1 ♜f7 35.♝e2 ♜e7 36.♝d3 ♜d6 37.♝c3= (or 37.♝a6=).

33.a5 ♜c4 34.a6 f5 35.♝f1 ♜f7 36.♝e2

36.♝b8?! ♜a5 37.♝e2? would be bad, because of: 37...♜e7 38.♝d3 ♜d6 39.♝c3 ♜c7+

36...♜e7 37.♝c5 ♜d6 38.♝b7†!

39.♝d3? is met by 39...♝e5† 40.♝c3 ♜c6, followed by ...♝b8=.

Diagram 4-7

39...e5?!

This natural move is not the best and probably gives away the win. White takes the chance to exchange some pawns and thereby ease the defence.

39...♝e5 (intending ...♝c6-b4) is not answered by 40.♝a5 ♜c6† (or 40...♝d7†), but by 40.♝d8! with the idea of 41.e4†=.

However, 39...h5† is better. If 40.g4 fxg4 41.fxg4 hxg4 42.hxg4, then Black can win a pawn: 42...♝e5+ 43.g5 ♜f7 44.g6 ♜e5=+

41.♖d8 ♖d6

If 41...h5?! then either 42.gxf5 gxf5 43.♖f7, or even 42.g5 with the threat of ♖f7-h8.

42.gxf5

42.h4 was worth considering. The knight is not so good in the struggle against the h-pawn, because it can only hold it up from one side. For that reason White would like to activate his h-pawn in good time. But after 42...fxg4 43.fxg4 e4! 44.♖f2 h5 45.♖g3 hxg4 46.♖xg4 ♖f5 47.♖xe3† 48.♖f4

The only chance for Black would be to play 43...h5?! himself.

44.e4!

This brings White a further exchange of pawns. If 44.♖d3? then: 44...e4† 45.fxe4 fxe4†=

Some important rules for knight endings

1) Try to post your pieces as actively as possible. It is very important to get a passed pawn. A passed rook's pawn is especially valuable.

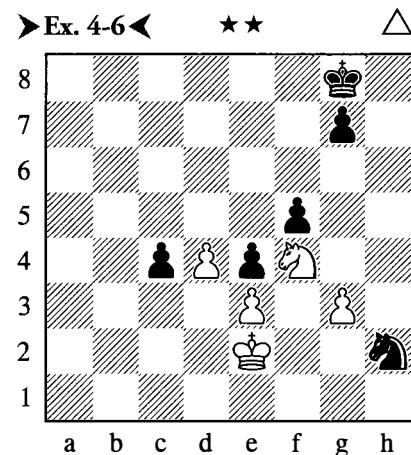

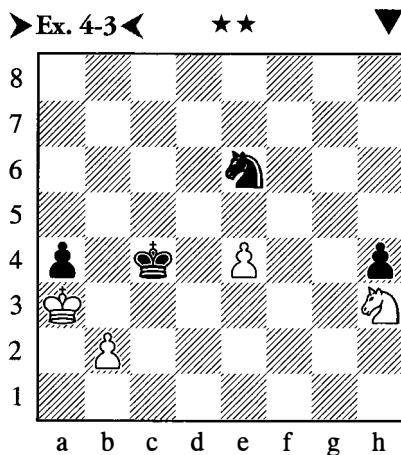

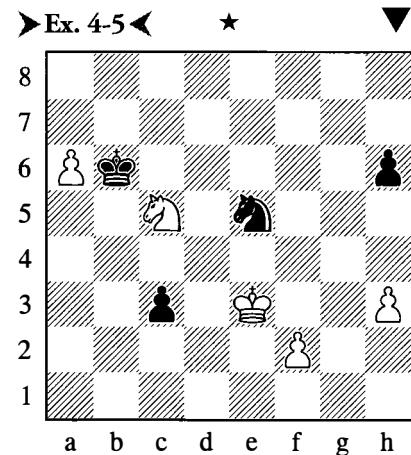

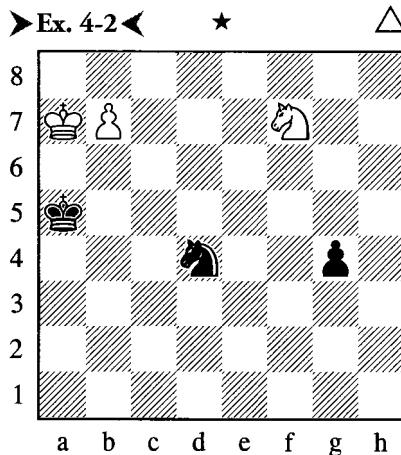

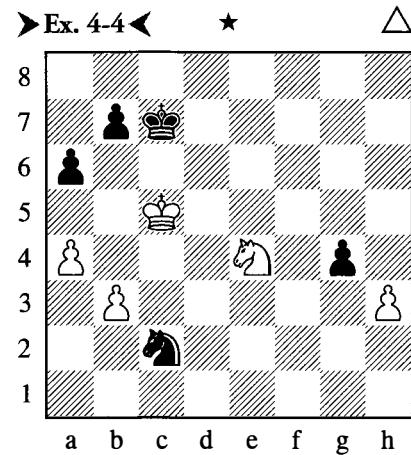

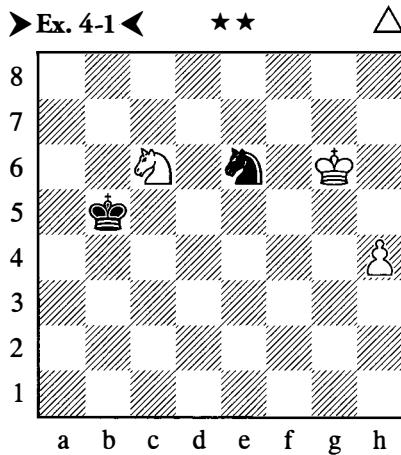

2) Try to limit the activity of the opposing knight. Use your pawns to deprive it of good squares.

3) Endings with 4 against 3 pawns on one side offer very good winning chances. On the other hand endings with fewer pawns (three against two, or two against one) are frequently drawn.

The English Opening

In this chapter we shall study some systems in the English Opening after 1.c4 e5. In the English Opening, White often tries to follow a clear strategic plan.

The positions (after 1.c4 e5 2.♘c3 ♘c6) which we shall examine here can also be found **with reversed colours** in the Closed variation of the Sicilian Defence. For that reason, many players who open 1.e4 as White will often reply to 1.c4 with 1...e5.

Proceeding like this helps to save time in the study of openings and allows us to gain an even better understanding of some systems (since we also aim for them with reversed colours).

Whenever we want to learn an opening, we must find some **typical games**, which help us understand the important strategic ideas underlying the opening. We must study not only the first moves, but should pay even closer attention to the typical plans and ideas.

Here we shall get to know some of the ideas behind the 3.g3 g6 4.♗g2 ♗g7 5.e3 system with the help of three sample games. Let us first take a look at the main ideas behind the system from White's point of view.

M.Dvoretsky – G.Timoscenko

Moscow 1966

1.c4 g6 2.♘c3 ♗g7 3.g3 d6 4.♗g2 e5

It is typical of this flexible opening that the same positions can be reached by different move orders.

5.d3 ♘c6 6.e3 ♘ge7

Black has two main plans for countering on the kingside: the pawn storm ...f5 followed by ...g5, or the exchange of bishops after ...♗e6, ...♗d7 and ...♗h3.

We shall soon see that the position of the knight on e7 is not the best. For that reason other moves deserve our attention: 6...♗f6!? or 6...♗h6!? or 6...f5!?

7.♗ge2 0–0 8.0–0 ♗e6

8...♗d7?!

Diagram 5-1

Black is now threatening ...d5. White's reply is obligatory.

9.♕d5! ♖d7 10.♗b1

In this variation White plays on the queenside; he prepares b4-b5. This pawn attack is supported by the pressure down the long diagonal and the active position of the knight on d5.

10...♝d8

One problem of the ♝ge7-variation is that Black cannot play ...♝h3 here, because the c7-pawn would be hanging.

10...a5 is interesting. Should Black open the a-file or not? Praxis does not provide a clear answer to this question. But if Black chooses the plan with ...♝d8 and ...c6, then he should probably play without ...a5, so that he keeps control of the b6-square. After 11.a3 ♕ae8 12.b4 axb4 13.axb4 ♜d8 14.b5 c6 15.bxc6 bxc6 16.♝xe7† ♖xe7 17.♔a3! ♖fe8 (\square 17...c5±) 18.♕a4

Diagram 5-2

White had reached a dream position in the game Dvoretsky – Veselovsky, Moscow 1967. The pressure against the black pawns on c6 and d6 is unpleasant. Black continued passively and was simply overrun: 18...♝c7 19.♕a8 f5 20.♗b8 ♜f8 21.♗b4 ♜a7 22.♗a1! ♜d7 23.♗a6 ♜f7 24.♗a5+–

11.b4 ♜xd5

11...♝c8?! 12.b5 c6 13.♗dc3 d5? 14.♗a3 ♜e8 15.bxc6 bxc6 16.♕a4± dxc4 17.dxc4 ♜d3? 18.♗fd1 ♜xc4 19.♕a5 was the game Robatsch – Boey, Nice Olympiad 1974. Black has no sensible way to defend his d8-knight, in view of 19...♝b6 20.♗xb6+– or 19...♝f6 20.♗b4+–, so he already had to resign.

If 11...c6, then 12.♝xe7† ♖xe7 13.b5 ♜d7 14.bxc6 bxc6 15.♔a3± Muller – Henneberger, Zürich 1962.

12.cxd5 ♜h3

Diagram 5-3

13.e4!

After Black exchanges the light-squared bishop, White has to post his pawns on the correct squares (according to Capablanca's rule)!

13...♝xg2 14.♗xg2 f5 15.f3±

White is slightly better. He wants to conduct operations on the c-file, where Black has a weakness

Diagram 5-1

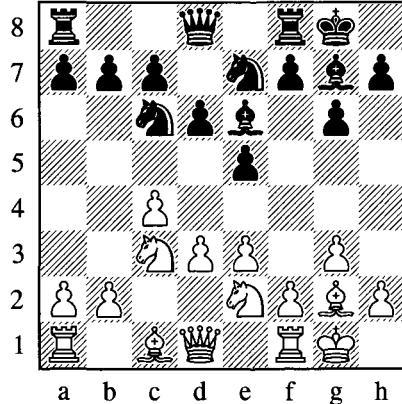

Diagram 5-2 (analysis)

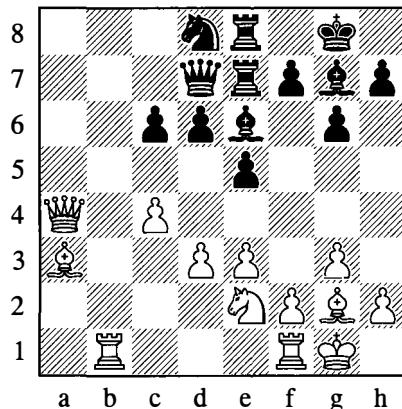

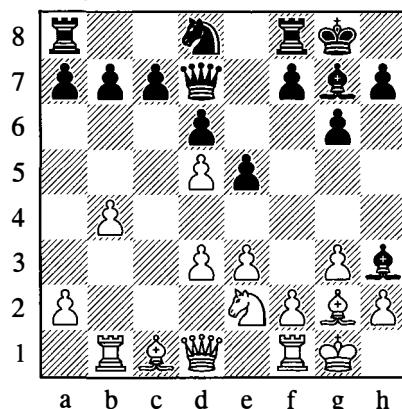

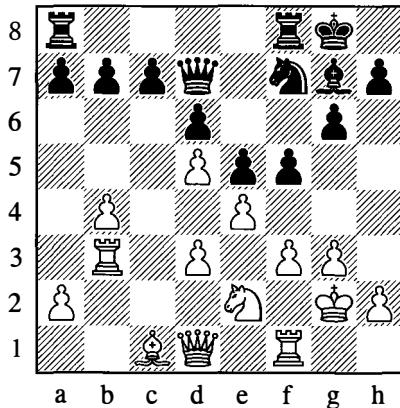

Diagram 5-3

Diagram 5-4

(the c7-pawn). If 15...c6, then 16.♘c3. Later White will exchange on c6 and play b4-b5, in order to obtain an outpost on the d5-square.

Black's move in the game prepares the exchange of his bad bishop.

15...♝f7 16.♜b3!

Diagram 5-4

White's plan is ♜c3 and then either ♜c1, or ♜c2 and ♜c1.

16...♝h6

16...h6?! is worse – after 17.♜c3 ♐g5?! see Ex. 5-1.

But 16...c6 is a slight improvement: 17.♜c3 ♐h6 18.♗xh6 ♐xh6 19.dxc6 bxc6 20.b5±

17.♗xh6 ♐xh6 18.♜c3 ♐f7

18...♝f7?! 19.♛c2 ♜ac8 20.♜c1±

19.♛c1!

White first wants to provoke a weakening of the black queenside, and only then set his pawns in motion.

19.♛c2 ♐g7 20.♜c1 ♜c8 is just slightly better for White.

19...♝g7 20.♛a3 a6

If 20...♛b5, then 21.♛a5! gives White the initiative on the queenside.

20...♝g8 is followed by 21.♜fc1 ♐f6 22.♜xc7! ♛xc7 23.♜xc7 ♛xc7 24.b5±.

21.♜fc1 ♜c8 22.♛b3±

22.♛a5?!

22...g5?

Black is looking for counterplay, but just weakens his king. White is very solid on the kingside.

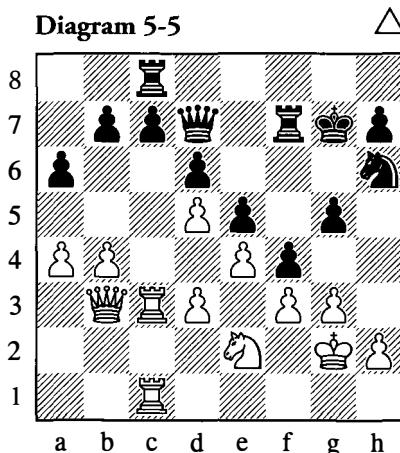

22...♝g8?! would be more advisable: 23.a4 ♐f6 (or 22...♛b5?! 23.a4 ♛b6) and White's advantage would not be too great.

23.a4!

The typical 23.d4? would be premature, because of 23...fxe4 24.fxe4 ♐g4.

23...f4?!

Diagram 5-5

Taking the pressure off the centre. 23...g4 would not be much better, due to 24.f4!±.

Once again, 23...♝g8 deserved consideration.

24.d4!

A typical response in the centre to an attack on the flank!

33.Qg1†? Qg7 34.bxc6 bxc6 35.Qc2! Qe8

Diagram 5-7

36.Qxg7†

36.Qcg2 also wins, but the variations after 36...Qxe6 are still complicated. Just before the time control, White understandably chooses a safe way.

36...Qxg7 37.Qxg7† Qxg7 38.Qxg7 cxd5?

38...Qxg7 39.Qxc6+- also leaves Black with no hope.

39.Qxe8

1-0

This flexible set-up (e3, d3, Qge2) can also be used against the Closed variation of the Sicilian Defence, for example: 1.e4 c5 2.Qc3 Qc6 3.g3 g6 4.Qg2 Qg7 5.d3 e6 6.Qe3 d6 7.f4 Qge7 8.Qf3 Qd4 9.0-0 0-0 10.g4 f5!=

The next examples show some important ideas for Black.

M.Tal – A.Yusupov

Moscow 1986

1.c4 e5 2.g3 Qc6 3.Qg2 g6 4.Qc3 Qg7 5.e3

This is the best move order for White, because Black will also have to bear in mind the move d2-d4.

5...d6 6.Qge2 Qh6!?

Just like ...Qge7, this is aimed against d2-d4, but it has some advantages in the main variation with d2-d3 (see the next sample game).

6...f5?! is the most active plan for Black. But here he has to take into account that White has the strong move d2-d4 available: 7.d4 (7.d3 Qf6 8.0-0 0-0

9... $\mathbb{Q}g4!$

In this variation Black must exert pressure against d4. He does not need the light-squared bishop for this.

10.h3 $\mathbb{Q}xe2$ 11. $\mathbb{Q}xe2$ $\mathbb{Q}f5$ 12.d5 $\mathbb{Q}e5$

Black has no problems. His pieces are very actively placed.

13. $\mathbb{W}c2$ $\mathbb{E}e8$ 14. $\mathbb{Q}f4?$!

14... $\mathbb{Q}d2$ would be a bit more prudent.

14...a5!

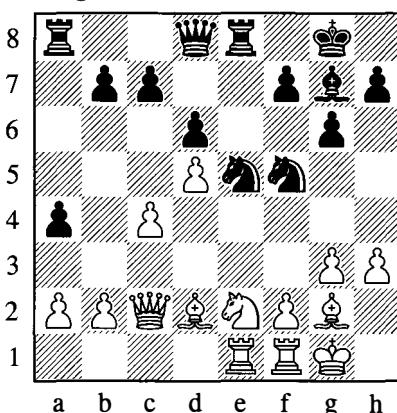

Black activates his forces on the queenside.

15. $\mathbb{E}a1$ a4 16. $\mathbb{Q}d2$

Better is 16. $\mathbb{Q}e4!?$ =.

Now Black finds a way to bring his strongest piece – the queen – into the game.

Diagram 5-9

16... $\mathbb{W}b8!$ 17. $\mathbb{Q}h2$ b5 18. cxb5 $\mathbb{W}xb5\#$ 19. $\mathbb{Q}c3$

After 19. $\mathbb{Q}e4$ Black could play 19... $\mathbb{W}c4$.

19... $\mathbb{W}d3$ 20. $\mathbb{W}xd3$ $\mathbb{Q}xd3$ 21. $\mathbb{E}xe8\#$ $\mathbb{E}xe8$ 22. g4 $\mathbb{Q}d4$ 23. $\mathbb{Q}xa4$ $\mathbb{E}e2$ 24. $\mathbb{Q}e3$ $\mathbb{Q}xb2$ 25. $\mathbb{Q}xb2$ $\mathbb{E}xb2$

Black is very actively placed. White should play with great care, but he underestimates the danger that can come in the endgame with bishops of opposite.

26. $\mathbb{E}d1?$

26.a4? is better, when White can meet 26... $\mathbb{E}a2$ with 27. $\mathbb{E}b1$, so Black should settle for 26... $\mathbb{Q}e2=$.

26... $\mathbb{Q}c2$ 27. a4 $\mathbb{Q}xe3$ 28. fxe3 $\mathbb{E}a2\#$ 29. $\mathbb{E}c1$ $\mathbb{Q}e5\#$ 30. $\mathbb{Q}g1$ $\mathbb{E}xa4$ 31. $\mathbb{E}xc7$ $\mathbb{E}a2$ 32. $\mathbb{E}b7$ $\mathbb{Q}g3$ 33. e4

41. $\mathbb{E}b7$ $\mathbb{Q}g1\#$ 42. $\mathbb{Q}h2$ $\mathbb{E}e1$

White cannot fend off the attack. 43. $\mathbb{Q}c4$ is followed by 43... $\mathbb{Q}f3$ 44. $\mathbb{E}b3\#$ $\mathbb{Q}f2$ and then ... $\mathbb{Q}e5\#$ and mate.

7.Qb1

7.0–0 is the main alternative. After 7...0–0 8.d3 Qe6, White can play 9.h3 to prevent the exchange of bishops.

In the game Csom – Yusupov, Lucerne Olympiad 1982, there followed 9...Wd7 10.Qh2 f5 11.b3! Qae8 (11...f4?! 12.exf4 exf4 13.Qxf4 Qxf4? 14.Qxf4 Qxc3 15.Qxe6±) 12.d4! f4? – see Ex. 5-2.

The immediate 9...f5?! (intending ...Qf7) is better:

- a) 10.b3 Qf7 (10...Qb8? 11.d4 Qe7 12.dxe5 dxe5 13.Wxd8 Qfxd8=) 11.d4 Qd7=

12.d3 Qxg2 13.Qxg2 f5

Diagram 5-12

The typical counterplay, which is all the stronger after the exchange of bishops.

14.f4?!

On the other hand, this typical move is not so good now. 14.e4= would be better. As in the first example, White then places the pawns correctly on the light squares!

14...axb4 15.axb4 exf4 16.gxf4

The white castled position has now been weakened.

Hanging pawns on c3-d4

We already know that after the exchange of the knight on c3, an isolated pawn is transformed into c- and d-pawns. In the chapter on ‘Hanging pawns’ in *Build Up Your Chess 3*, we studied some typical plans with the pawns on c4 and d4. Here we shall take a look at the situation when the pawns are still on c3 and d4. Compared to normal hanging pawns this formation has some advantages, but also some disadvantages.

Advantages

The central pawns are easier to protect: d4 is safe and c3 is easily defended. A major piece on the third rank can attack and at the same time defend the c3-pawn, so it is convenient to operate on the kingside. It is also possible to change them into c4-d4 hanging pawns at a favourable moment.

Disadvantages

The centre is not so well controlled and the opponent can use the d5-square. Things become particularly dangerous when the pawns are blockaded (the c4-square is weak!). We found out about this situation in the chapters ‘The backward pawn’ and ‘Blockade’ in *Build Up Your Chess 3*.

The typical plans and ways to proceed for both sides are very similar to those we saw in the themes ‘The isolated pawn’ and ‘Hanging pawns’.

The side with the c3-d4 formation should try to **avoid exchanging pieces** and should **attack on the kingside**. The **light-squared bishop** is a particularly important piece here.

Some typical ideas are:

- 1) mobilize the major pieces via the third rank;
- 2) attack with the h-pawn;
- 3) transfer the rook to the kingside via b5.

14.♝e2

14.0–0 is followed by 14...♝d6 15.g3 e5? (15...b5! is also very interesting).

14...b6

Now after 14...♝d6? there follows simply 15.♝g5.

15.♝f4 ♜c6 16.0–0 ♜b7

17.♝h3

17.f3 is better, but then White has no hope of an attack on the king.

17...♝a6!

This diagonal is also very useful for the counterplay.

18.♝fe1 ♜ac8

19.♝d2?

After this passive move Black takes charge. 19.♝e5! was correct. Then 19...♝xe2 20.♝xe2 ♜xc3 21.♝xc3 ♜xc3 22.d5! would give White counterplay.

19...♝e4 20.♝b1

Hanging pawns on c3-d4

When defending it is necessary to do more than simply spot your opponent's threats and fend them off in time; you also need to exploit every opportunity to prepare a counter-attack. Frequently it is not an option to concentrate only on defending, because the opponent's attack may develop too quickly.

In the last example White made a typical mistake: he counted only on the obvious moves (almost like reflexes). Such mistakes are often found in praxis: we attack a piece and simply think that it has to move away; we capture a piece and assume that the opponent will recapture. Such conditioned reflexes are perhaps the result of too many blitz games. But they often lead to our not looking for alternatives, for candidate moves for our opponent.

In the chapter 'Counterplay' we have already dealt with this problem. In the test which follows, you should try to find the tactical ideas which are typical of a counter-attack: intermediate checks, other intermediate moves and counter-strokes.

But in your games you should also almost automatically take into account the active moves for your opponent. Then you will overlook much less.

Ex. 7-1

H.Rossetto – N.Rossolimo

Mar del Plata 1950

19. $\mathbb{E}xd8!$

(1 point)

White is also clearly better after 19. $\mathbb{W}d2$, but the intermediate move played in the game wins more quickly.

19... $\mathbb{E}xd8$

19... $\mathbb{Q}xc2$ 20. $\mathbb{Q}xf6\#$ $\mathbb{Q}g7$ 21. $\mathbb{Q}xh5\#$ $\mathbb{Q}xh5$

20. $\mathbb{Q}xf6\#$ $\mathbb{Q}h8$ 21. $\mathbb{W}c1!$

Once again, very accurate play. 21. $\mathbb{W}c5$ is not so strong, on account of 21... $\mathbb{W}xe2$.

Black resigned, in view of 21... $\mathbb{Q}xa2$ 22. $\mathbb{W}e3+-$ or 21... $\mathbb{W}xe2$ 22. $\mathbb{W}h6+-$.

Ex. 7-2

L.Szabo – A.Kotov

29. $fxe4!!$

(1 point)

Black probably underestimated this intermediate move.

29. $\mathbb{E}e2?$ is bad after 29... $d4$ 30. $\mathbb{Q}xd4$ $\mathbb{Q}xd4$ 31. $\mathbb{E}xd4$ $exf3$ and Black takes the initiative: 32. $\mathbb{E}e1$ (32. $\mathbb{E}ed2$ $\mathbb{E}xd4$ 33. $\mathbb{E}xd4$ $\mathbb{E}xd4$ 34. $cxd4$ $\mathbb{W}e7$ 35. $\mathbb{Q}h5$ $\mathbb{Q}c4!+-$) 32... $\mathbb{W}e7$ 33. $\mathbb{E}xd6$ $\mathbb{E}xd6$ 34. $\mathbb{Q}h5$ $\mathbb{W}h4$ 35. $\mathbb{Q}g3$ $f4+-$

29... $\mathbb{Q}xd2$

If 29... $fxe4$, then 30. $\mathbb{Q}xe4+-$.

(another 1 point for this variation)

30. $\mathbb{W}xd2$ $fxe4?$

A decisive mistake. 30... $dxe4$ was required. White replies 31. $\mathbb{Q}d4!$ (threatening $\mathbb{W}h6$) and now:

a) 31... $\mathbb{Q}g7?$ loses to 32. $\mathbb{W}g5\#$ $\mathbb{Q}f8$ 33. $\mathbb{Q}xe6\#+-$.

b) Black should immediately throw overboard his pawn ballast, in order to open the files and diagonals for his pieces: 31... $f4!$ 32. $\mathbb{W}xf4$ $e3$ 33. $\mathbb{W}xe3$ (33. $\mathbb{W}h6$ $\mathbb{Q}f5!$) 33... $\mathbb{Q}d5\pm$

a) 20... $\mathbb{E}e8?$ is also bad, due to 21.fxe4 $\mathbb{Q}xe4$ 22. $\mathbb{Q}xf7\#+$.

b) 20... $\mathbb{Q}e6?$ deserves consideration:

b23) 22... $\mathbb{Q}e6$ and here 23. $\mathbb{W}g3\pm$ is best. Instead, the tempting 23. $\mathbb{E}g6$ is not so strong. White would win after 23... $\mathbb{W}xh4?$ 24. $\mathbb{E}xg7\#$ $\mathbb{Q}h8$ 25. $\mathbb{E}xf7\#$ $\mathbb{Q}g8$ 26. $\mathbb{E}g7\#$ $\mathbb{Q}h8$ 27. $\mathbb{E}g5\#$ (Golombek), but Black has a better defence in 23...f6! c) A principled continuation is 20...exf3 21. $\mathbb{Q}b1!$

(another 1 point)

(neither 21. $\mathbb{E}xf3$ $\mathbb{Q}d5$ nor 21.e4 $\mathbb{Q}d5$ is so strong). Black must now defend against White's threat of $\mathbb{Q}h7\#$:

c1) 21...fxg2? loses to 22. $\mathbb{E}xf6$ h6 23. $\mathbb{W}g3!$ (or 23. $\mathbb{E}g6!$).

c2) After 21...h6? there follows 22. $\mathbb{E}xf3$ $\mathbb{Q}d5$ 23. $\mathbb{E}g3!!$ $\mathbb{W}xh4$ (23...f6 24. $\mathbb{W}xh6\#-$) 24. $\mathbb{E}xg7\#$ $\mathbb{Q}h8$ 25. $\mathbb{E}h7\#$ $\mathbb{Q}g8$ 26. $\mathbb{E}h8\#.$

c3) 21... $\mathbb{E}e8?$ 22. $\mathbb{Q}xf6$ (22. $\mathbb{E}xf3?$ $\mathbb{Q}e4\#$) 22... $\mathbb{W}xf6$ 23. $\mathbb{W}xh7\#$ $\mathbb{Q}f8$ 24. $\mathbb{E}xf3$ $\mathbb{W}h6=$ (Kasparov)

Rook against pawn

The endgame of rook versus pawn has a very concrete and dynamic nature. Variations have to be calculated accurately, as every tempo can play a decisive part. There are practically no specific positions which we absolutely have to memorize.

"The main role is played by the knowledge of typical procedures which help us to find the correct move more quickly and to calculate variations more accurately." – Mark Dvoretsky

It is on these typical procedures, the principal plans, which we will concentrate in this chapter.

Saavedra's idea

This brilliant study illustrates a rare case where the pawn defeats the rook. Usually it is possible to give up the rook for the pawn.

The technique of calculating variations

In the lesson 'Priorities when calculating variations' (Chapter 19 of *Build Up Your Chess 2*), the author pointed out that there are no absolute rules in chess and that there is no infallible algorithm for calculating variations: "Situations at the board can vary enormously and there are of course different ways of coming to a conclusion. This mental flexibility is the greatest advantage we have as human beings and I see no reason why we should do without it."

We have already studied the most important methods (candidate moves, the comparison method and the elimination method), which, if correctly employed, can save a lot of time and energy. Here we shall give a few more useful suggestions.

Candidate moves lie at the heart of the **calculation of variations**. If our selection of candidate moves is much too small, then the strongest continuation may lie somewhere beyond our horizon.

Your variations are not as successful as you would like? Then go back and **look for other candidate moves!**

If even that does not help, then you should downgrade your evaluation of the position and try to achieve more modest goals.

22.♗xd1!

The move order is important. For example, 22.♗d5 ♜d8 23.♕h7† ♜h8 24.♗xd1 fails to 24...♗h4! 25.♕h5? ♜g5!–+.

22...♗g5

The technique of calculating variations

White had seen this defensive resource, but not its refutation.

24...♚h8

24...♚f7 25.♛h5†+-

25.fxg5+-

Black loses in all variations:

- a) 25...g6 26.♛a1†+-
- b) 25...♛xg5 26.♕g6† ♕g8 (26...♛h6 27.♕xh6† gxh6 28.♕a1† ♕g8 29.♕e7#) 27.♕e7†! ♛xe7 28.♕h8† ♕xh8 29.♛h5† ♕g8 30.♛h7#
- c) 25...♝f1† 26.♛xf1 ♕xf1 27.♕f5† ♕g8 28.♕xe6† ♕f8 29.♕h8#

When **attacking**, we should **first calculate the most forcing continuation**. Perhaps we won't even need to calculate other variations if we find a forced solution. But we must calculate this apparently strongest variation extremely accurately, making sure we **take into account all opposing resources**.

Diagram 9-2

27.♛h4† ♕e5 28.♛xd4†**

1–0

When **defending**, make use of **the elimination method** (see Chapter 17 of *Build Up Your Chess 3*).

If the variations appear very similar, or if various move orders are possible, then use **the comparison method** (see Chapter 23 of *Build Up Your Chess 3*).

Try to pay particular attention to the first moves. A mistake there cannot be corrected.

Diagram 9-2

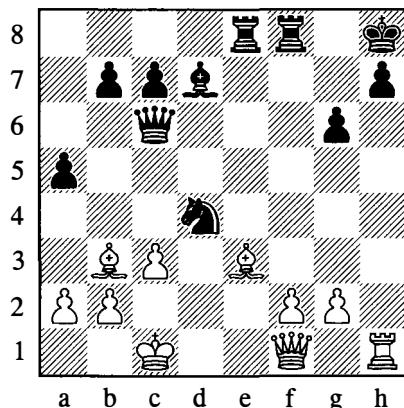

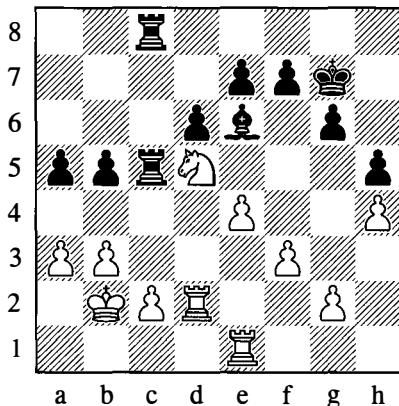

Diagram 9-3**Diagram 9-3****V.Anand – G.Kasparov**

28...axb4 29.axb4 Rc4 30.Qb6??

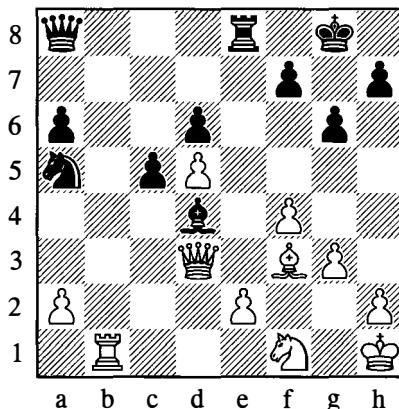

White had overlooked Black's 31st move. After 30.c3! Rxd5 31.Rxd5 Rxc3 32.Re2 he would still have good chances of a draw.

30...Rxh4† 31.Qa3? Rxc2!

32.Rxc2 is met by 32...Rb3† and then 33...Re3†.

0–1

Variations should end with an **evaluation**. You should not evaluate the position **until your opponent has run out of available active moves**. But if you are no longer in any danger, you should bring your calculations to an end and evaluate the final position.

Diagram 9-4**Diagram 9-4****A.Yusupov – S.Kindermann**

Baden-Baden 1992

The game continued 25...Ra7 26.Qd2 Re3 27.Wc2± and the position remained unpleasant for Black, who cannot bring his knight into the game.

The correct solution was:

25...Rb8!!

My opponent also saw this, but he ended the following long variation too soon.

26.Rxb8† Ra8 27.Wxa6 Rb1 28.Qg2 c4! 29.Wa8†? Qg7 30.Wxa5 c3 31.Wa4

Look for insurance when calculating long variations. If, for example, you can see a perpetual check after a piece sacrifice, then, as long as a draw is

in principle acceptable, you can go into this variation without calculating exactly, hoping that something more will turn up at the end of it.

Diagram 9-5

The Reti Opening

In this chapter, we shall deal with the Reti Opening from Black's point of view. Of course these brief recommendations will not exhaust all the possibilities which are to be found in this flexible opening.

Typical of the Reti Opening is the fianchetto of the king's bishop (1. $\mathbb{Q}f3$ d5 2. g3). The basic idea of the Reti consists of creating piece pressure against the centre; so White often tries to fianchette both bishops. Here is a well-known example of this strategy for White.

R.Reti – F.Yates

New York 1924

Diagram 10-1

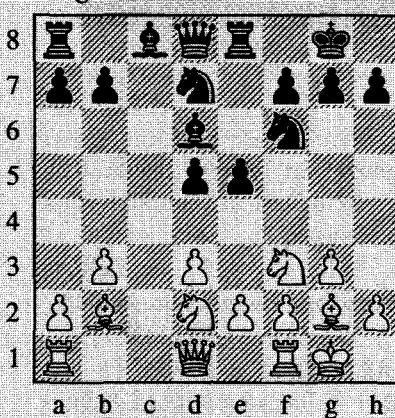

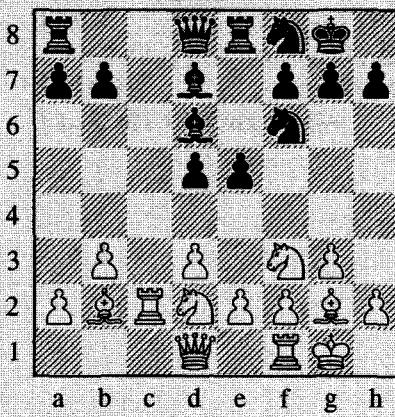

Diagram 10-2

1. $\mathbb{Q}f3$ d5 2. c4 e6 3. g3 $\mathbb{Q}f6$

3...dxc4 here, or one move later, leads to a solid variation of the English Opening.

4. $\mathbb{Q}g2$ $\mathbb{Q}d6$ 5. b3

5. d4 is possible here, since the position of the bishop on d6 limits Black's options (for example, the variation with ...dxc4 becomes less attractive for Black).

5...0-0 6.0-0 $\mathbb{Q}e8$ 7. $\mathbb{Q}b2$ $\mathbb{Q}bd7$ 8. d3

8.d4 is also possible.

8...c6 9. $\mathbb{Q}bd2$ e5 10. cxd5 cxd5=

Diagram 10-1

Black has a strong centre, which Reti now attacks with his pieces.

11. $\mathbb{Q}c1!$

An interesting plan by Reti, which has become quite typical.

11... $\mathbb{Q}f8$ 12. $\mathbb{Q}c2$ $\mathbb{Q}d7$

13. $\mathbb{Q}a1!?$ $\mathbb{Q}g6$ 14. $\mathbb{Q}fc1$

14... $\mathbb{Q}c6$ 15. $\mathbb{Q}f1!?$ $\mathbb{Q}d7$

Black tries just to defend the centre, but he underestimates his opponent's opportunities to increase the pressure. 15...d4!= would be better here, in order to close the a1-h8 diagonal.

16. $\mathbb{Q}e3$ h6?

Now White can decide the struggle in the centre in his favour. 16...d4 would be an improvement here too: 17.♕c4=

Before continuing, I would like to make just a couple of remarks on the move order 1.♗f3 d5 2.c4:

a) After 2...c6 3.b3 ♗f6 4.♗b2 ♗g4 it is harder for White to fianchetto the king's bishop.

b) 2...e6 3.b3 leads to a line of the English Opening.

To meet the Reti, I recommend a solid system with the development of the queen's bishop to g4 (1.♗f3 d5 2.g3 c6 and then 3...♗g4). White has two main ways to act in the centre: he can play c2-c4 or prepare e2-e4.

Reti systems with c2-c4

This is what Reti himself played. But Black's position is very safe.

The passed pawn in the middlegame

In most cases a central passed pawn is a significant advantage in the middlegame. Often one or even two pawns may be sacrificed in order to obtain a far advanced passed pawn.

Advantages of the passed pawn

- 1) It is dangerous for our opponent because we may threaten to promote it.
- 2) It ties down some opposing pieces which have to blockade it.
- 3) It controls important squares deep in our opponent's half of the board.
- 4) It often cuts off communication between our opponent's pieces. He is not able to transfer his pieces so freely from the queenside to the kingside and vice versa. This increases our chances of a successful attack on the king.
- 5) Our pieces can penetrate the opponent's half of the board from behind the passed pawn.

Disadvantages of the passed pawn

- 1) We can lose it.
- 2) If the passed pawn is blockaded soon enough, then it often hampers the mobility of our own pieces. The blockading piece then receives frontal protection from our passed pawn and is often very well placed.

Main methods of play for the side with the passed pawn

- 1) Advance it to the queening square, fight against the opposing blockade.
- 2) Exploit the central squares in order to penetrate with the pieces.
- 3) Attack on the flanks, the passed pawn is used to divert the opposing forces.
- 4) Support the passed pawn in good time; it is often very effectively defended by a bishop.

The passed pawn in the middlegame

Main methods of fighting against the passed pawn

1) Blockade – stop the passed pawn as soon as possible.

2) Of course it is even more effective simply to destroy the passed pawn.

3) Create your own passed pawn, to divert the opposing pieces from the support of their passed pawn. Then the goal would be an exchange of passed pawns.

In the following two examples, we shall be able to observe many of these methods.

- ✓ When we should employ prophylaxis

Prophylactic thinking

Prophylactic thinking is one of the most important themes in the positional game. Chess players often forget that they are not alone at the board, and that they must also take into account their opponent's plans.

The habit of always asking yourself what your opponent wants to do, of answering the question correctly and taking into account the information you have gained, is prophylactic thinking.

Prophylactic thinking is for me a philosophy of the chess struggle, which embodies due respect to one's opponent.

Prophylactic thinking often helps not only to find the opponent's ideas, but also to work out the solution to the position. **A move which simultaneously improves our own position and blocks our opponent's plans is usually the optimal solution.**

Prophylactic moves are stronger than purely defensive moves because they improve your own position. Prophylactic moves are also stronger than mere improvements to your own position, because they also hinder your opponent's game.

There is another important psychological factor in prophylactic thinking which I wish to emphasize: it is extraordinarily difficult to battle against a prophylactic player. Once the plans you have prepared have been thwarted a few times, mistakes often creep in.

Of course we do not always make use of prophylactic thinking. It is when the course of the game is very quiet that prophylactic thinking is most useful. In situations in which we have forcing options, we must first of all calculate variations – we are not interested in our opponent's intentions if we have a forced mate in three moves!

The following games show how and when we should employ prophylactic thinking.

$\mathbb{W}xf8$ 20. $\mathbb{B}xd3$ $\mathbb{Q}a6=$ we can clearly see the difference between the two moves.

17... $\mathbb{Q}b4$

17... $\mathbb{Q}xd4??$ is of course bad, on account of 18. $\mathbb{Q}xd4$ $\mathbb{W}xd4$ 19. $\mathbb{Q}f6\#+$.

18. $\mathbb{Q}h6!$ $\mathbb{B}e8$

18... $\mathbb{Q}xd3?$ 19. $\mathbb{Q}xf8$ $\mathbb{W}xf8$ 20. $\mathbb{B}xd3+-$

19. $\mathbb{Q}b5$ $\mathbb{Q}c6$ 20. $\mathbb{Q}xc6$ $\mathbb{Q}xc6$

Diagram 12-3

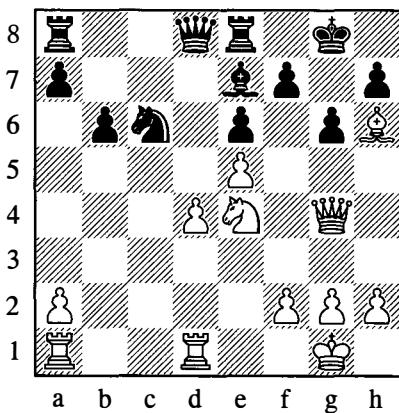

Diagram 12-3

White can be content. The exchange of bishops was not bad for him. But it is once more time for some prophylactic thinking. What does his opponent want to do here? Probably ... $\mathbb{Q}b4-d5$ again! White can protect the b4-square with a3. But the prophylactic move played in the game is much better.

21. $\mathbb{R}ab1\pm$

White develops his rook and aims to bring it into the attack by $\mathbb{R}b3-f3$ (or $h3$). At the same time he prevents the move ... $\mathbb{Q}b4$.

21. $\mathbb{W}f4$ $\mathbb{Q}b4$ 22. $\mathbb{Q}g5$ $\mathbb{Q}xg5$ 23. $\mathbb{Q}xg5$ $\mathbb{Q}d5!$ 24. $\mathbb{W}h4$ $\mathbb{W}d7$ 25. $\mathbb{W}h6$ $f5$ 26. $exf6\pm$ would not be so clear.

21... $\mathbb{W}d5?$

After White has twice thwarted his plans, Black reacts nervously and loses a decisive tempo.

21... $\mathbb{Q}b4?$ is followed by 22. $\mathbb{R}xb4!$ $\mathbb{Q}xb4$ 23. $\mathbb{Q}f6\#$ $\mathbb{Q}h8$ 24. $\mathbb{W}h4+-$.

But 21... $\mathbb{B}c8\pm$ would have been better.

22. $\mathbb{W}f4+-$

The threat is $\mathbb{Q}f6\#$. The black queen must retreat.

22... $\mathbb{W}d8$ 23. $\mathbb{B}b3$ $\mathbb{B}c8$ 24. $\mathbb{h}4$

Also good is the simpler 24. $\mathbb{R}f3$ $\mathbb{R}f8$ 25. $\mathbb{Q}xf8+-$.

24... $\mathbb{B}c7$

24... $\mathbb{Q}xh4$ is followed by 25. $\mathbb{R}f3$ (or 25. $\mathbb{Q}d6!?$) 25... $\mathbb{B}c7$ 26. $g3+-$.

Diagram 12-4

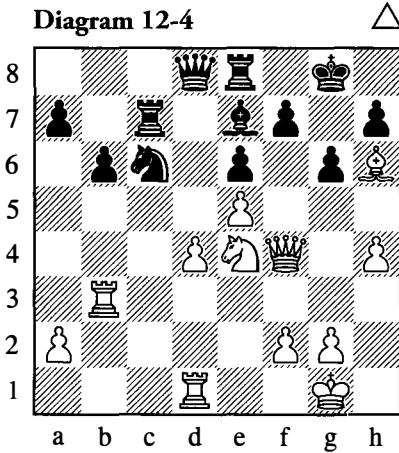

Diagram 12-4

25. $\mathbb{R}f3$

As Tal showed me after the game, White has a pretty way to win here: 25. $d5!!$ $exd5$ 26. $\mathbb{R}xd5$ $\mathbb{W}xd5$ 27. $\mathbb{Q}f6\#$ $\mathbb{Q}xf6$ 28. $\mathbb{W}xf6$ $\mathbb{W}xe5$ 29. $\mathbb{R}e3\#+$

25... $\mathbb{B}f8$

After this loss of the exchange, the game cannot be saved. But if 25... $\mathbb{Q}xh4$, then simply 26. $g3+-$.

26. $\mathbb{Q}xf8$ $\mathbb{W}xf8$ 27. $d5!$ $exd5$ 28. $\mathbb{R}xd5$ $\mathbb{Q}b4$

28... $\mathbb{Q}d8+-$ would have lasted longer.

Diagram 12-5

Black wants to play ...a6 and release the pin. That should encourage White to seek an active continuation.

14...a6 15.♗xd7† ♜xd7 16.♗xd7† ♜xd7†±

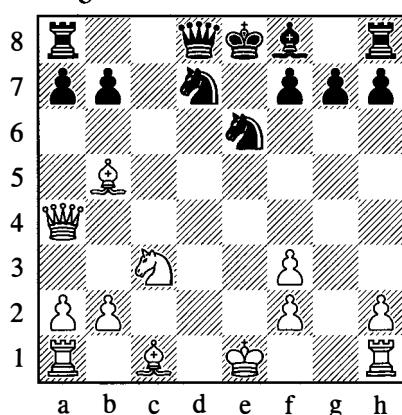

White wants to exploit the open position of the black king. For that he needs all the central files.

17.0–0? ♜d6

Black has two ways to consolidate the position and bring his king to safety: ...♝ac8 followed by ...♝c6, or ...♝fd8 followed by ...♝e8.

35.♝xb7+–

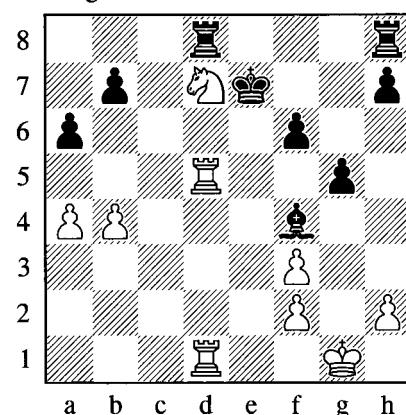

White has a large material advantage, which he was able to convert into the full point.

Black's mistake on move 29 was not a matter of mere chance. With his prophylactic decisions on moves 18, 19 and 21, White hindered his opponent's desired consolidation of the position and developed a dangerous initiative. Mistakes in such situations are almost preprogrammed and prophylactic play provokes them.

"The development of the capacity for prophylactic thinking brings the chess player a powerful step forward and clearly raises his playing strength." – Mark Dvoretsky

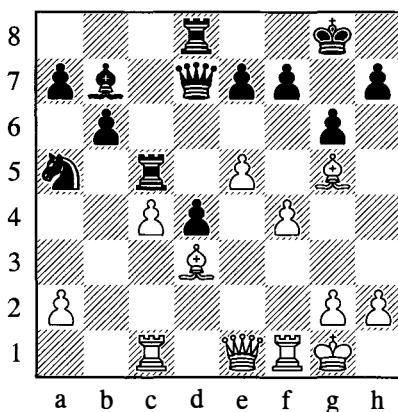

In the test which follows, we shall train this ability. First ask yourself what the other side wants to do, and note that down in your answer. Try to prevent it and, if possible, to improve your own position at the same time.

Bishop against knight

In this chapter we shall study endgames in which the bishop has an advantage over the knight. But the subject of bishop against knight has greater strategic significance. So we shall start by comparing the pieces briefly:

- 1) The knight must get close to the opposing pieces, the bishop can act from a distance.
- 2) The knight needs outposts, the bishop benefits from a sound pawn structure.
- 3) The knight is better in a struggle on one side of the board, and in closed positions, the bishop performs better in open positions, or when there is play on both flanks.
- 4) The knight is good for creating a barrier or a fortress, the bishop is better at supporting its passed pawns.

The endgame of bishop and pawn against knight

If the king does not blockade the pawn, then the defence is often very difficult. The result may depend on whether the stronger side manages to put the opponent in zugzwang.

White positions his knight wrongly; he should give up the a2-pawn and immediately blockade the passed pawn.

29.♔d2! is correct: 29...♗xa2 30.f4 (or 30.♔f2 f4 31.♔e1 followed by ♘e4 and ♔d2 is also possible – Dvoretsky) 30...♗e7 31.♔f2 ♕d5 32.g3 ♕d6 33.♔e3 ♕e4 34.♔d4† and White has set up a fortress.

28. $\mathbb{Q}d6?$

White is trying to obtain counterplay, but the black a-pawn becomes too strong.

28. $\mathbb{Q}d3!$ (K.Müller) is better, with the idea of shutting in the black king on the edge of the board. That is the only way for White to get good drawing chances.

28... $\mathbb{Q}xa4$ 29. $\mathbb{Q}c2$

29. $\mathbb{Q}xf7\mathbb{Q}b3$ offers no hope for White.

The knight is very unfortunately placed on c4. The black king nevertheless gets through to the a-pawn and the passed pawn diverts the white forces.

As Botvinnik showed, White could have constructed a fortress by placing the knight on e2. The black king is able to win the a-pawn, but it can then be cut off on the edge of the board by the white king on c2: 62.♚f1! ♜c3 63.♗g3 e3 64.♗d1 ♜b2 65.♗e2 ♜xa2 66.♗c2=

Defence

For many players, defending is noticeably more difficult than conducting an attack; they must first of all **spot the opposing threats**, so that they can then react appropriately to these threats. Very often the defender must **play with extreme accuracy** and find only moves. Accurate calculation of variations and well-developed tactical vision are very important in order to save a game.

We have already seen some of the tactical weapons available to the defence in the earlier chapters on 'Counterplay' and 'Counter-attack', and also in 'Drawing combinations' (*Build Up Your Chess 3*, Chapter 14) and 'The use of traps' (*Boost Your Chess 1*, Chapter 9).

Resilient defence in inferior positions, that is, making use of all the practical chances and making it harder for the opponent to carry out his plans, can after all earn you a lot of points. There are few players who are able to achieve a win from a good position without slipping up when faced with stubborn resistance. **The goal of the defending side is to make the opponent's life as difficult as possible for him** (of course, only over the chessboard!).

In this chapter we shall discuss the most important defensive principles.

1) Weaken your castled position only if there is no other option

Unmotivated pawn moves lead to a weakening of the castled position!

Diagram 14-1

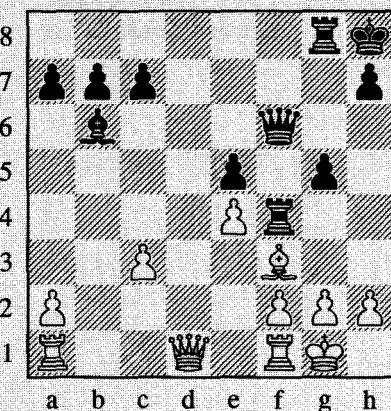

Diagram 14-1

M.Chigorin & Ponce – W.Steinitz & Gavilan

Consultation game, Havana 1889

1.h3?

"The obvious reaction, but nevertheless a decisive mistake! You see, the move creates a weakness and White's already seriously threatened position cannot stand any more." – Euwe

1.♗g4!? is followed by 1...♝xf2+ 2.♔h1 ♛xe4+. Steinitz gave a better solution, which keeps the

castled position compact: 1.♔h1! g4 2.♕e2 ♕xf2? (or 2...♗xe4?? 3.f3! gxf3 4.♗xf3 ♖c6 5.♗f1†; but not 2...♗xf2? 3.♗xf2 ♖xf2 4.♕xg4=) 3.g3! ♗xe4 (3...♗h6 4.♗d5 ♕xg3 5.♗xe5† ♗g7 6.♗e8†=) 4.♗g2

Euwe thought that White was winning here, but Black actually has two good options:

a) 4...♗d8 5.♗c2 (5.♗xf2?? ♗xd1+=) 5...♗xe2 6.♗xe2 ♗d2 7.♗xg4 (7.♗xd2?? ♖f3#) 7...♗c6†? (7...♗e1† 8.♗g1 ♔f2†=) 8.♔h3 ♗d6 with a strong attack.

b) 4...♗f8 5.♗xg4 ♗xg4! (5...♗e3 6.♗d5†) 6.♗xg4 ♗c6† 7.♔h3 ♗f6 again with a strong attack.

Even after 1.♔h1! White's position remains critical, but his opponent has to solve problems which are much more complicated than those in the game.

1...g4!

The move h2-h3 makes it easier for Black to open lines against the white king.

2.hxg4

If 2.♗xg4, then 2...♗gxg4 3.hxg4 ♗xf2 4.♗xf2 ♗xf2† 5.♔h1 ♔h4# (Euwe).

2...h5!+ 3.g5

3.gxh5 ♗xf3+=

3...♗xg5 4.♔h2 ♗h4†

Or 4...♗g3!! 5.fxg3 ♗h4†=.

5.♗g1 ♗f4 6.♗e1 ♗xg2†!

Another way to finish it off was 6...♗h1† 7.♔xh1 ♗h4† 8.♗g1 ♗xf2† 9.♔h2 ♗h4#.

0-1

2) Conduct an economical defence

You should only employ as many pieces in the defence as necessary! Sometimes your pieces, when grouped tightly into a few squares, can get in each other's way! The superfluous pieces should rather be used for active operations.

3) Seek compensation for your opponent's attack

Since your opponent is attacking in any case, you can perhaps at least aim for an advantage in material. If you have to suffer, then it should preferably not be in vain.

(These two principles require to be applied sensibly and in the correct dosage, without overdoing it!)

Positional play 3

4) Counter-attack is the best form of defence

If the defending side gets a chance to play actively, it absolutely must take advantage of it. A counter-attack can tie up some of the opponent's active pieces and thus weaken the wave of attackers and relieve the defence. A counter-attack can even turn out to be more dangerous than the attack if the opponent has opened up his own castled position.

The following classical example illustrates these principles.

Diagram 14-2

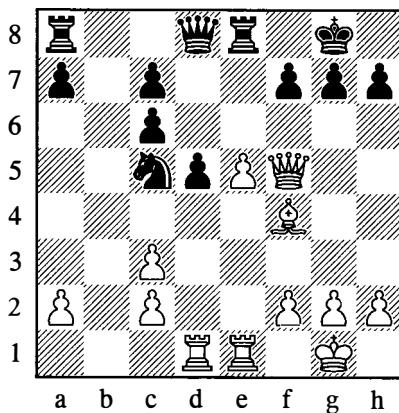

Diagram 14-2

S.Winawer – Em.Lasker

Nuremberg 1896

White threatens a kingside attack.

17...Qc8!

Exchanging queens would be an optimal solution for Black.

18.Qh5

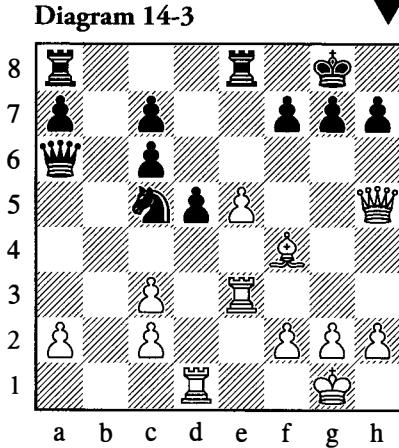

White wants to attack on the kingside and naturally keeps the queens on. However, simplification would perhaps be the better option: 18.Qxc8 Raxc8 19.c4!=
18...Ra6!?

18...g6 (followed by ...Qf5 and ...Qe6) would be a purely defensive operation. 18...Qe6!? is also not bad.

But Lasker has confidence in his position and looks for a more active defence.

19.Rxe3

Diagram 14-3

19...Qxa2!

Principle 3.

“Somebody once said that anyone who takes such a pawn must be either a beginner or a grandmaster. The former takes it out of ignorance and the latter because he believes that he still has enough counter-chances, while at the same time being aware of the numerous dangers which threaten him.” – Euwe

20.Rcl

20.Rh3 is met by 20...Qxc2, and the queen protects the king from a distance.

20...Qc4

Principle 2.

21.♕f3

The queen's activity means that the opponent cannot yet go over to a direct attack.

21.♕g5 ♔e4†

21...♔e6

21...♔e6? is also possible: 22.♕e3 ♕f8†

22.♕d2 ♕e7 23.♕h3 ♕e4 24.f3

Tarrasch suggests 24.f4!?. After 24...♕g6 (24...♕f8?) 25.♕h4 ♕d7 26.g4 ♕e4, White would have a tempo more than he does in the game.

24...♕g6 25.♕h4 ♕d7 26.f4 ♕e4! 27.g4

Tarrasch points out that 27.♕d3 is better, planning ♕e1 and then g4.

27...♕f8 28.♕f2**Diagram 14-4****28...a5!**

Principle 4.

As White still has no dangerous threats on the king-side, Black activates his trump, the passed a-pawn.

29.♕e3 ♕c4 30.f5 a4!

"Lasker has built up his position according to the principles of Steinitz: the castled position has not been weakened and due attention has been paid to the requirement of an economical deployment of the defending pieces, in that the knight and one rook are passive, whilst the queen and the other rook are taking an active part in the defence. It is of course clear that the counter-attack with the steadily advancing passed pawn is not being forgotten." – Euwe

30...♕xg4†? would just open up a file for White to attack the black king with 31.♕g3.

31.♕f1

The variation 31.e6 fxe6 32.fxe6 ♔xe6! 33.♕xe6 ♕xg4†+ is very typical for defence, which should be based on the tactical resources in the position.

31.h3 (Tarrasch) is followed by 31...a3 32.e6 fxe6 33.fxe6 ♕e7 34.♕f5 a2 35.♕f1 ♕xf1†!+ (Euwe).

31...a3 32.♕ee1 a2 33.h3 c5

Principle 4.

Black also seeks counterplay in the centre.

34.♕h2

Here too, 34.e6 would be bad, this time on account of 34...fxe6 35.fxe6 ♔xe6 36.♕xe6 a1♕+.

39.♜a1

Diagram 14-7

If 39.♘xe6†, then 39...♝xe6 40.♜xe6 a1♛ 41.♜xal ♜xa1+.

39...♝f8!

Principle 4.

The white rook has been diverted to a1 and the white king's position is weakened. Black begins a counter-attack on the kingside!

40.♜fe1 ♜d8 41.♜b6 ♜af7 42.♕g5 ♜f2† 43.♕g3 ♜xc3†

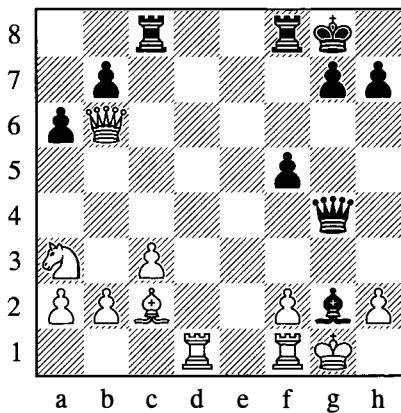

White resigned, in view of 44.♔h4 ♜xh3† 45.♔xh3 ♜8f3† 46.♔h4 ♜h2#.

5) Swap off your opponent's active pieces

Candidate moves

We dealt with this theme extensively in *Build Up Your Chess 2*, Chapter 7. Candidate moves are the most important part of the calculation of variations. Sometimes it is enough simply to discover the correct move and we immediately realize that we have also found the solution. But if we do not find a good variation, then we must look for new ideas, new candidate moves.

Here are some important guidelines for the calculation of variations.

1) Accurate calculation of the very first moves is more important than being able to calculate long variations

It is also very important to find good candidate moves at the start of the calculation.

Diagram 15-1

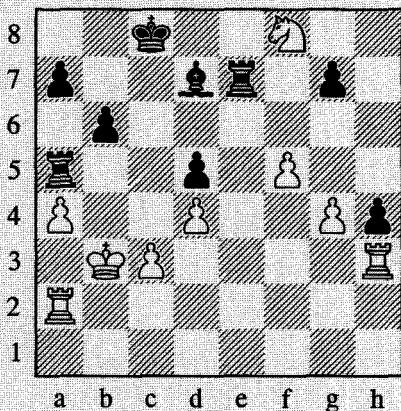

Diagram 15-1

P.Leko – A.Khalifman

Black is defending a bad ending. But he misses an idea which could save him.

56...♝e4?

This move leads to a lost rook ending.

Black could force a draw after 56...♝b5!! (threatening ...♝c4†) 57.axb5 (or 57.♝a1 ♜c4† 58.♝a3 ♜b5=) 57...♝xb5† 58.♝a4 (58.♝c2?? ♜e2†+) 58...♝a5† 59.♝b3 ♜b5† with a repetition of moves.

57.♝xd7 ♜xd7 58.♝xh4 ♜e7 59.♝g2 b5 60.♝h7 ♜f8 61.g5 bxa4† 62.♝b4 ♜a6 63.f6 a3 64.♝xg7 ♜ee6

And White was able to successfully convert his material advantage. See Exercise F-15 in the Final Test.

2) Do not just look for candidate moves for yourself, but do so for your opponent too

It is sometimes more difficult to look for candidate moves for your opponent than to develop your own

ideas. But it is impossible to calculate variations well without taking the opponent into account.

Diagram 15-2

B.Macieja – Z.Sturua

European Ch, Batumi 2002

White is clearly better. But it is not so easy to convert his advantage in material. So White looks for a concrete way to do so.

41.♕d8!

Another possibility is 41.♗e3! ♗c3 42.♕d6 ♗d5† 43.♗d3+–.

In a good position there are sometimes several good moves.

41...g4†!

The best chance.

If 41...♘xd8, then 42.♗xf6† ♗c8 43.♗d4! ♗e7 44.♗a2 ♗a7 45.h4!+– and Black loses, because of the bad position of the knight on a4.

42.♗f4

Other king moves are not good:

a) 42.♗e3? ♗g5†

b) 42.♗f2? ♗xd4† 43.♗xd4 ♗f6† 44.♗e3 ♗xc5=

42...♗xd4

42...♗xd8 is followed by 43.♗xf6† ♗c8 44.♗d4+–.

43.♗xe6?

Nor is 43.♗xd4 all that clear: 43...♗xc5! 44.e5! (44.♗xe6?? ♗xe6†) 44...♗h6 45.♗g5 ♗e6† (45...♗h8 46.♗xc6† ♗f7 47.♗f5+–) 46.♗xe6 ♗xe6 47.♗xh5 ♗xe5† 48.♗xg4†±

43...♗c3!

Diagram 15-3

44.♗d3!

The following variations show how important it is to take into account the opponent's resources:

a) 44.♗d6? ♗xc5!

b) 44.♗a2? ♗xe6 45.♗xa4? ♗d2#

44...♗xe6 45.♗d6† ♗e7 46.♗xc6†

This ending is probably won for White, although Black can still put up bitter resistance.

46...♗d4

46...♗b4 is slightly more stubborn: 47.♗f5 ♗xc5 48.♗h6 ♗d3 49.♗xh5 ♗f2 50.e5+–

4) If, after thinking for some time, your preferred move still does not lead to a clear conclusion, you should go back and look for other candidate moves

Perhaps you will find a stronger move.

not achieve much, then look for new possibilities in the position. Also, do not forget to take into account Rules 2 and 3. The key to everything lies in discovering the correct idea. Consider the test positions as though they were positions in a normal game (that means that you do not always have to win!).

Combinational vision

It is very important to develop and improve your tactical abilities. **Tactics can be learned.** Most combinations are merely repetition or simple variations on known motifs. What yesterday ranked as art and demanded great intellectual effort, is today simply technique which can be learned in any school.

When we have seen a lot of different combinations, or better still solved them, we will also have a greater chance of hitting the correct solution in a game. In the ideal case, our instinct will say: "Stop, there is something here."

Diagram 16-1**Diagram 16-1****S.Dolmatov – A.Yusupov**

Yerevan 1982

19.♗d2?

White's position is already dubious: the bishop does not have a diagonal and can turn into a bad bishop, and on the kingside the black pieces are looking dangerous. The bad move played in the game leads in turn to a further mistake, which allows a typical tactical operation. Better was 19.♗e3†.

19...♝f4 20.dxe5?

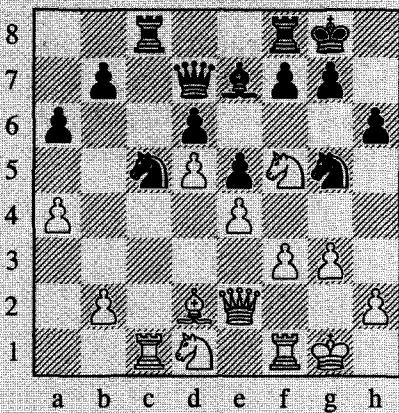

Again 20.♗e3† is an improvement.

20...♛xe5! – 21.♝xe5?

White was only considering the automatic 21...dxe5 and did not spot the tactical pattern.

21...♚g5!

Black threatens mate on g2, and also a knight check with a discovered attack on the white queen. White cannot parry both these threats and so he resigned.

Diagram 16-2**Diagram 16-2****A.Yusupov – S.Sitanggang**

Yerevan Olympiad 1996

Do you recognize the same pattern here? The black queen is on d7 and the white knight is already on f5. All that needs to be done is to get rid of the knight on c5, which is protecting the queen on d7, to open

the d1-h5 diagonal, to chase away the knight on g5 and to play $\mathbb{W}g4\ldots$

23.£xc5!

23.f4 is not so clear after 23...£gxe4 24.£g4 g6 ∞ .

23...£xc5 24.f4 exf4!

If 24...£h3†, then 25.£g2 g6 26.£xe7†+—.

24...£h7? simply loses to 25.£g4.

25.gxf4 £xe4 26.£xe4†

26.£g4?! would not be clear, on account of the queen sacrifice 26...£xf5 27.£xf5 £xd2 28.£f2 £b3 and Black has reasonable compensation.

26...£f6 27.£c3

Diagram 16-3

As a result of the combination, White has won two knights for rook and pawn. However, this minimal material advantage is not decisive. What is much more important is that White can attack on the kingside, where he will have more attacking pieces than there are defenders.

27...£e8 28.£d3

But not 28.£xh6†? gxh6 29.£g2† £h7 30.£xf6, because of 30...£g8†.

28...£xc3 29.£xc3

29.bxc3!?

29...b5

29...g6 would be the principled move, trapping the knight after 30.£xh6† £g7.

Diagram 16-4

But here White has a combination, based on getting a pawn wedge on f6: 31.f5! £xh6 32.£h3† £g5 (32...£g7? 33.f6†+—) 33.£g3† £h6 (or 33...£h5 34.£f4 £h6 35.£h4† £g7 36.f6† £g8 37.£h6+—) 34.£h4† £g7 35.f6† £g8 36.£h6 £g4† 37.£h1+—

30.axb5 axb5

Diagram 16-5

31.£f2?

White is looking for a way to bring his rook into the attack. But after 31.£f3 b4 32.£g3 bxc3 (32...g6?) 33.£xg7† (33. £d4!) 33...£h8 (after 33...£f8? White has the sacrifice 34.£g8†+— to lure the king back to g8) 34.£h3 £e6 ∞ the position remains complicated, e.g. 35.dxe6 £xe6 36.£g3 £f6 37.£g8† £h7 38.£e8 £g6.

However, as Christopher Lutz showed after the game, White had a simple route to the win:

In order to strengthen your combinational vision, you should not only study typical combinations, but also solve some studies and unusual positions. This demands tactical fantasy and intuition. Standard ideas may be useful because they crop up frequently, but **original ideas widen our tactical horizons** and are therefore even more valuable.

The King's Indian Defence

Naturally, it is not possible to discuss all the nuances of the King's Indian Defence in one short chapter. Nor is simply teaching a few variations sufficient. In order to play such a complicated opening well, one should **study several games by strong players which have good annotations**. In those you will find a lot of important and typical ideas and many of the standard plans for the opening.

In this chapter we shall discuss a fundamental positional question associated with the King's Indian Defence: the 'King's Indian Bishop'. In many cases this bishop is perhaps Black's most active piece. But often, especially in systems with ...e5, it is shut in by its own pawns and is downgraded to the status of a 'bad' bishop.

A strong King's Indian Bishop

This is sometimes even worth the sacrifice of a pawn. In the following game, Black opens the long diagonal for his bishop with the typical sacrifice ...c5.

The exchange of the King's Indian Bishop

Either side can have its reasons for an exchange of the dark-squared bishop.

1) In a closed position the King's Indian Bishop can be worse than its counterpart, White's dark-squared bishop.

2) White may exchange off the King's Indian Bishop if its influence is too strong on the long diagonal or if White wants to weaken his opponent's castled position.

The advantages and the disadvantages of the exchange of bishops are dependent on the specific nuances of the position. In the following example, Black swaps off the dark-squared bishop in order to be able to operate on the dark squares on the kingside.

Of course Kasparov knew the classic game Kotov – Gligoric, Zürich Candidates 1953, in which the same idea was played – see *Boost Your Chess 2*, Ex. 21-7 and Ex. 21-8.

An alternative is 15... $\mathbb{Q}xg3$ 16.hxg3 b5± (1 point), but of course Black does not want to open the h-file unnecessarily.

Queenside pawn majority

In chess literature we often find references to the queenside pawn majority as an advantage. But if one side has more pawns on the queenside, then the other will have more on the kingside or in the centre. So, why should the pawns on the queenside be more valuable?

Firstly, we must understand that **the pawn structure is only one of a number of positional factors in the middlegame** which play a role in the evaluation of a position. Often the mere fact of a pawn superiority is far from being the most important factor in the position! For example, the course of play can frequently be determined by the activity of the pieces, the safety of the king or an open file. However, when a lot of pieces have been exchanged, then the pawns generally have a more important part to play. The chances of obtaining a passed pawn become greater. **Since the opposing king is more often on the kingside, it cannot take action so quickly against a passed pawn on the queenside** as it can against a central passed pawn. So the importance of the queenside majority increases in the endgame.

Secondly, in the middlegame it is often easier to play where the majority of our forces are posted. **The pawn majority has its role to play only when we can advance the pawns** and obtain a passed pawn. Such a passed pawn can do well for itself in the middlegame too.

If both sides castle short, “the pawns on the queenside can advance freely, without weakening their hinterland, whereas the situation on the kingside is more complicated. There the advance of the pawns exposes the king, which possibly offers attacking chances.” (Samarian)

In our next chapter we shall study the advantages associated with a superiority in the centre. In both situations, the essential point is that **the pawns remain mobile** and are neither blockaded nor rendered harmless.

Of course, when undertaking action on the queenside, we should never forget the safety of our king. In the middlegame, we should support the pawn majority on the queenside with active pieces and ideally also with the control of an open file. Then this pawn superiority can bring clear advantages.

In an unbalanced position in the endgame, the advantage often goes to the side which is first to set in motion its pawn majority on the flank and which can better support this operation. (See Ex. 18-1 and Ex. 18-2.)

With this move, Black activates all his pieces (the light-squared bishop can now use the f5-square) and also weakens White's pawn formation on the kingside (the h4-pawn will be isolated).

In this position Black has good chances of an attack on the queenside, since his knight is already very actively placed. For that reason it is worth creating a passed pawn.

After 20... $bxc6$ White would be slightly better.

Central pawn majority

The various exchanges during a game can lead to an asymmetrical situation, in which one side has four pawns against three on the kingside (the opposing side being without the e-pawn). The opponent then naturally has a pawn majority on the queenside. In the previous chapter, we analysed the advantages which can result from a superiority on the queenside.

But a pawn superiority in the centre can also be an advantage, **especially in the middlegame**, if we are able to use our e- and f-pawns for an attack on the king. These pawns can force the opposing pieces away from the best defensive squares and, in a later phase of the attack, they can destroy the opponent's castled position. Of course, for the evaluation of the position, it makes all the difference if this invasion can be supported by the other pieces.

As we have already emphasized in the previous chapter, in these situations other factors, such as the control of an open file or piece activity, often play an even more important role than the pawn structure on its own. These elements absolutely have to be taken into account when you are evaluating a position in which there is a pawn majority in the centre.

Diagram 19-6

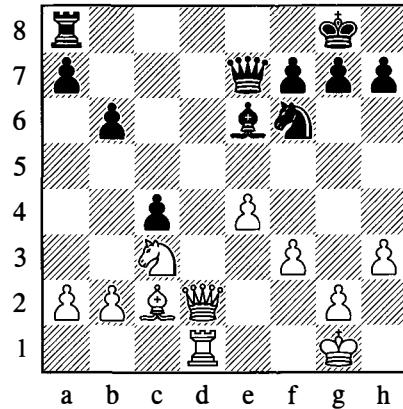

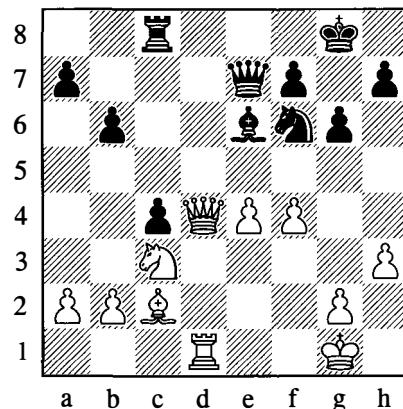

Diagram 19-7

Some guidelines

The pawn majority in the centre is an advantage if:

- 1) your pawns are mobile and the opposing majority on the queenside is either immobile or has not yet advanced far enough;
- 2) you control the only open file (this is normally the d-file);
- 3) your pieces support the advance of the pawns.

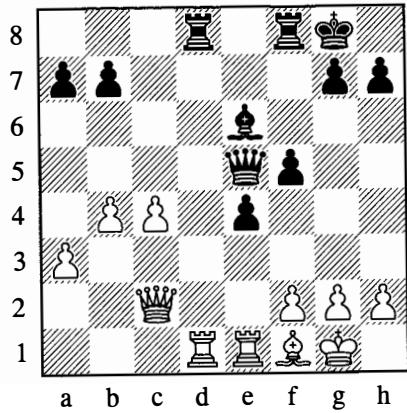

Strategy 4

In the endgame too, these factors can influence the evaluation in favour of the pawn majority in the centre. We shall see that in some of the positions in the test.

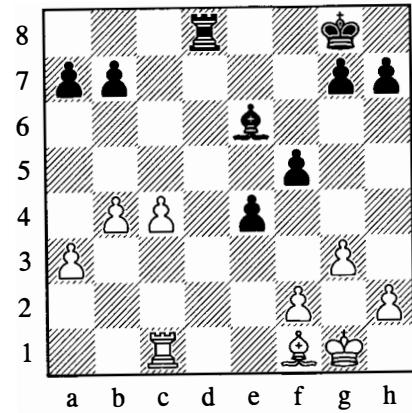

The side with the pawn superiority in the centre is well advised to **advance the central (e- and f-)pawns**. But you should be very cautious about moving the other pawns, so as not to weaken your own castled position. It is important to **fight for the d-file** and place your pieces in **active positions** behind the central pawns. That will then give you good attacking chances with the breakthroughs f5-f6 or e5-e6.

Pawn storms

The pawn storm is an important method of attack. In this lesson we shall concentrate on situations in which **the kings are on different sides of the board**. In such positions it is possible to advance several pawns without endangering your own castled position.

The aims of pawn storms are:

- 1) to drive opposing pieces away from good defensive positions;
- 2) to destroy the opposing castled position by means of exchanging or sacrificing one or more pawns;
- 3) to open up lines against the opposing castled position in order to attack with the major pieces.

9.Qc2 Qbd7

As a result of his slightly inaccurate play (making the move a7-a6 too soon), Black provokes his opponent into attacking.

Diagram 20-1

“The plan of playing g2-g4-g5, so as to drive the black knight away from f6, where it is playing a key role in the control of the central squares and the defence of its king, fits equally well into the Queen’s Gambit and the Nimzo-Indian. Sometimes this sharp move, followed by h2-h4, can also drive away the other black pieces to create more space for White on the kingside. A pioneer of these ideas was Mikhail Botvinnik, who developed long term strategic plans for their implementation.” – Kasparov

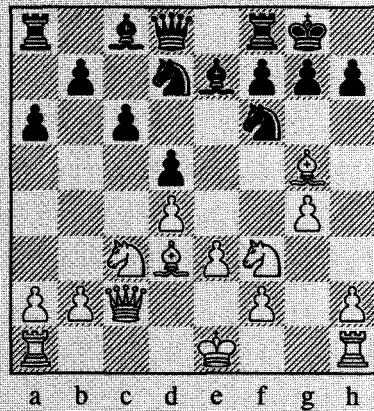

There is already the threat of 11.Qxf6 Qxf6 12.g5.

10...Qxg4?

With this move Black unnecessarily opens a file leading to his king.

Also not good is 10...h6?! 11.Qf4 (intending g4-g5) and if 11...Qxg4? then 12.Eg1.

Diagram 20-1

10...g6 would be somewhat better (Botvinnik) and White still has some work to do to open files on the kingside. Nevertheless, this pawn move also weakens the castled position.

It is worth considering the pawn sacrifice 10... $\mathbb{E}e8?$. Guidelines for positions with castling on opposite sides

1) You have to **play very energetically**. Your opponent will also have chances to throw his pawns forward. The side which is first to begin a direct attack usually has the advantage.

3) The pawns on the flank on which you are castled are best positioned side by side. The safest position for these pawns is the starting position on the second rank. **Each small weakness in the castled position**, such as the moves ...g6 or ...h6, **can speed up the opposing attack**. A pawn storm will then lead much more quickly to an opening of lines, and that may be enough to decide the result of the game.

The initiative

Unlike an attack, which either targets the king or the other pieces, the initiative does not absolutely have to have a specific aim. The initiative is like “feeling out the opposing position before the start of the battle” (Euwe). It is the phase of the game which precedes the actual attack, the phase in which “the balance of forces has not yet been seriously disrupted” (Euwe). Of course it does not always make sense to strictly separate the concepts of ‘initiative’ and ‘attack’.

The initiative can be the result of a lead in development stemming from the opening, or simply the consequence of a more active placing of the pieces. The initiative can be defined as **the ability to create threats and to force the opponent into a reaction**. The side which has the initiative can dictate the course of the game.

The initiative is a dynamic advantage. It can simply disappear after a few moves, the opponent can neutralize it, or, if we are not playing energetically enough, he can even take over the initiative.

16. $\mathbb{W}g4$

White is still playing for a win. But perhaps he should instead be looking for a way to simplify to a level position.

After 16. $\mathbb{Q}b3$ $\mathbb{W}c7$ (16... $\mathbb{W}b6$ is interesting, e.g. 17. $\mathbb{W}e1$! $\mathbb{Q}xb5$ 18. $\mathbb{Q}a5$ $\mathbb{Q}a6$! 19. $\mathbb{Q}xb6$ axb6 20. $\mathbb{Q}xb7$ $\mathbb{Q}xb7$ 21. $\mathbb{W}b4$ $\mathbb{Q}d7\#$) 17. $\mathbb{Q}d6$ $\mathbb{W}xd6$ 18.exd6 $\mathbb{Q}c8$! 19. $\mathbb{Q}xd7\#$ $\mathbb{Q}xd7$ 20.c5 the position remains balanced.

Diagram 21-2

Positional play 4

The immediate 16. $\mathbb{W}e1!?$ would be relatively straightforward; after 16... $\mathbb{W}xe1$ 17. $\mathbb{E}fxe1=$ White's initiative compensates for the pawn weaknesses on the queenside.

16... $\mathbb{Q}xb5!$

The simplest solution.

If 16...a6? then 17. $\mathbb{Q}b3! \pm$ followed by $\mathbb{W}xg7$.

16...0–0? is still premature, on account of 17. $\mathbb{Q}xd7$ $\mathbb{E}xd7$ 18. $\mathbb{Q}xe6! \pm$.

After 16... $\mathbb{Q}g6$ too, Black must reckon with 17. $\mathbb{Q}xe6$.

Diagram 21-3

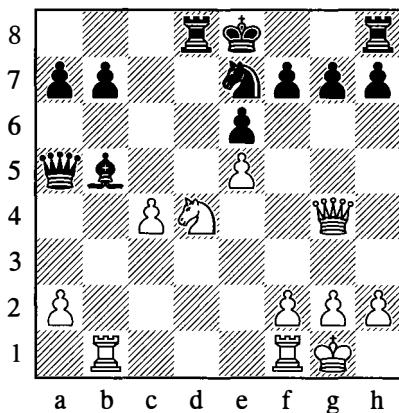

Diagram 21-3

17. $\mathbb{E}xb5?$

This mistake leads to the loss of the initiative, after which White is left with various pawn weaknesses (c4, e5). The knight should make use of the b5-square to head towards d6. Hence 17. $\mathbb{Q}xb5$ 0–0 18. $\mathbb{W}e4$ $\mathbb{Q}c6$ 19. $\mathbb{E}fe1=$ (or 19. f4!?) would have been the correct continuation.

17... $\mathbb{W}c7\mp$ 18. $\mathbb{Q}e2$

Because of the hanging position of the knight, White cannot take the g7-pawn: 18. $\mathbb{W}xg7??$ $\mathbb{E}g8\mp$

After 18. $\mathbb{Q}f3$ 0–0 19. $\mathbb{W}e4$ $\mathbb{E}d7$ (or 19... b6!?) 20. $\mathbb{Q}g5$ (20. $\mathbb{E}b3!?$), there follows 20... $\mathbb{Q}g6$ 21. h4 a6! 22. $\mathbb{E}b4$ (22. h5 axb5 23. hxg6 fxg6! 24. $\mathbb{Q}xe6$ $\mathbb{W}xc4\mp$) 22... $\mathbb{W}xe5\mp$.

18...0–0 19. $\mathbb{Q}g3$

19. $\mathbb{W}e4\mp$ would be better, but White is still hoping to get an attack on the kingside. However, his forces are not strong enough to achieve that.

19...a6!

Now Black starts playing actively, since his knight can protect the kingside by going to g6.

20. $\mathbb{E}b3$ $\mathbb{Q}g6$ 21. $\mathbb{W}e4$

White is already forced onto the defensive. But he cannot protect all his weaknesses, e.g. 21. f4? $\mathbb{W}xc4\mp$.

21... $\mathbb{Q}xe5$ 22. $\mathbb{E}xb7$ $\mathbb{W}c5$ 23. h3

Diagram 21-4

23...h6!?

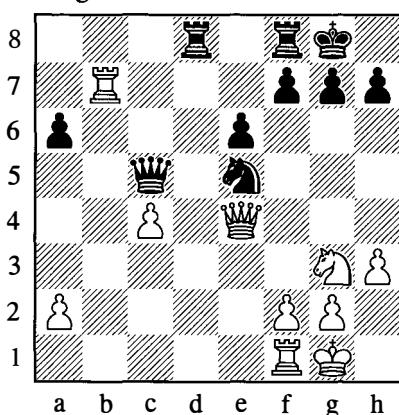

A useful procedure in the open position; the king may later need an escape square.

23... $\mathbb{E}d4$ is not so clear after 24. $\mathbb{E}c7\mp$.

It is also too early to take material. After 23... $\mathbb{W}xc4$ 24. $\mathbb{E}cl$ White gets counterplay.

24. $\mathbb{E}e1?$

Diagram 21-4

Just encouraging the knight to move to an even better position.

24...Qd3 25.Qf1

25.Qe3 is no better: 25...Qd4 26.Qf3 Qf4 27.Qh5 Qxc4+–

25...Qd4 26.Qe3 Qxc4

Black has not only won a pawn, but in addition he is now controlling the centre. The white pieces remain uncoordinated. It is little wonder that the game comes to a rapid end.

27.Qh5?!

Attacks of this sort would only have a chance against an extremely inattentive opponent.

27...Qd5 28.Qa7

The combination 28.Qd7 Qxd7 29.Qg3 is very easily refuted: 29...f5 and Black wins.

28...Qd8

Bringing all the black pieces into play.

29.Qg3 Qf4

Black moves over to a direct attack. Here White resigned, in view of 30.f3 Qxg2! (or 30...Qxa2–+) 31.Qxg2 Qc5+– with the double threat of ...Qxa7 and ...Qd2†.

The side which has the initiative must try to **turn it into something tangible**: you either have to win material, provoke some static weaknesses in the opposing position or mount a direct attack on the opposing king.

It is often difficult to find the correct moment to win material. Sometimes, after one side loses material, it can take over the initiative. The passive pieces, which were for example protecting a pawn, may return to active play after the loss of the pawn.

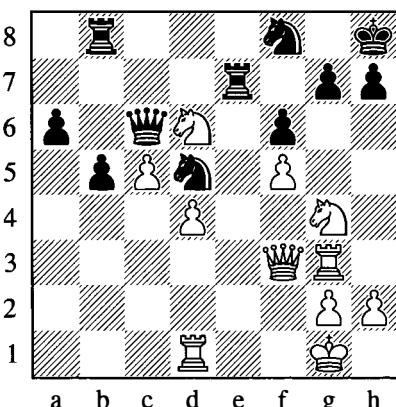

Diagram 21-5

A.Yusupov – E.Magerramov

Leningrad 1977

The position is very complicated. Black has blockaded the white pawns in the centre, and has his own passed pawns on the queenside. White can force perpetual check with a little combination: 30.Qe3? Qxe3 (30...Qb4? 31.Qh5 is risky for Black) 31.Qf7† Qg8 32.Qh6† Qh8=

Diagram 21-5

Positional play 4

30.h4!?

It is also interesting for White to break Black's blockade with either 30. $\mathbb{E}d3?$ a5 31. $\mathbb{Q}e3$ or 30. $\mathbb{W}b3?$ a5 31. $\mathbb{Q}e3$.

30...b4 31. $\mathbb{Q}h2$ a5?

32... $\mathbb{gxf6}$ 33. $\mathbb{W}g4$

Both sides were already in time trouble. First 33. $\mathbb{E}e1!$ would be stronger.

33... $\mathbb{Q}g6$

Why did White take his king off the first rank? The answer can be found in the variation 33... $\mathbb{Q}d7$ 34. $\mathbb{E}e1!$ $\mathbb{Q}e5$ 35.dxe5 $\mathbb{W}xc5$ 36.exf6 $\mathbb{Q}xf6$ 37. $\mathbb{W}f4!+ -$ with a decisive attack.

A final mistake. 39... $\mathbb{W}e6$ was required and if 40. $\mathbb{E}g7$, then 40...f5 and Black attacks the h6-pawn and remains in the game. The computer finds the

In many cases the initiative is so valuable, that you can comfortably sacrifice a pawn.

To better understand the subject of the ‘initiative’ and to be able to evaluate such unbalanced positions more accurately, you have to study a lot of examples from the games of strong players.

Diagram 21-7

A.Yusupov – D.Roos

17. f4!?

White offers a typical pawn sacrifice, so as to advance his pawns on the kingside.

17... exd5 18. e5 $\mathbb{E}ae8$ 19. $\mathbb{W}d2$

The compensation for White is obvious. He has a clear initiative on the kingside, he is blockading the black pawns and his position in the centre is very stable.

19... f6 20. exf6

Naturally White, who possesses the bishop pair, is happy to open the diagonals and files.

21. f5! $\mathbb{Q}e4$ 22. $\mathbb{W}h6$ $\mathbb{E}xf5$ 23. $\mathbb{E}xf5$ gx5 24. $\mathbb{E}f3$

The second pawn sacrifice was easily decided on too. Black’s king position is completely open, and although White has no specific threats, that will always remain an important factor. The position is reminiscent of those middlegames with opposite-coloured bishops; in such situations the initiative is often more important than the material. Here too,

White's dark-squared bishop has no direct counterpart to contest the dark squares.

White opens the position even more. This made his opponent nervous and so provoked the decisive error.

- ✓ The struggle against the centre in the Grünfeld

The Grünfeld Defence

A principal theme in openings is the struggle for the centre. Modern openings have a much wider interpretation of this theme than classical openings, such as the Queen's Gambit. Thus it is not always considered necessary to place your pawns in the centre. You can still get a lot of counterplay by using your pieces and pawns to **put pressure on the centre**.

In the Grünfeld Defence, White usually gets a strong centre. But this big centre has to be supported by his pieces. Black must play very energetically to quickly develop strong pressure on the centre. Attacks on the white centre by the c- or e-pawn, in conjunction with the active work done by the fianchettoed dark-squared bishop, provide the compensation for the opponent's superiority in the centre.

We have already discussed various methods of working on the opening. Anyone who wants to play the Grünfeld Defence should first and foremost study the games of Kasparov. In this chapter, we shall employ the method of 'Follow my leader' (see Chapter 4 of *Boost Your Chess 2*), and will look at Kasparov's games only. Without question, this opening is particularly well suited to the dynamic style of this extraordinary player. But he is also responsible for some interesting ideas with White. The annotations for the following two games are based on analysis by Kasparov.

Otherwise h4-h5 will follow with a strong attack.

13...e6 14.♗d1

White must shore up his centre. The rook is also leaving the dangerous long diagonal.

14...♞a5 15.♕d3 e5!

The best defence, which also illustrates one of the basic ideas behind the Grünfeld Defence – the struggle against the white centre.

Another typical way of breaking up the centre is 15...c5, but that is very dangerous here, because of 16.♕xh5! gxh5 17.♗f6 ♗xf6 18.♘xf6 and now:

a) 18... $\mathbb{E}fd8$ 19. $\mathbb{E}h3$ $\mathbb{Q}f8$ 20. $\mathbb{E}g3$ and White develops a strong attack, for example 20... $cxd4$ 21. $\mathbb{E}g5$ $\mathbb{W}c6$ 22. $\mathbb{E}xh5$ $\mathbb{W}xc3\#$ 23. $\mathbb{Q}f1$ $\mathbb{Q}e8$ 24. $\mathbb{E}b5\#$ $\mathbb{Q}c6$ 25. $\mathbb{E}h8\#$ $\mathbb{Q}d7$ 26. $\mathbb{E}xd4\#$ $\mathbb{Q}c7$ 27. $\mathbb{W}xf7\#$ $\mathbb{Q}c8$ 28. $\mathbb{E}xd8\#$ $\mathbb{Q}xd8$ 29. $\mathbb{E}xd8\#$ $\mathbb{Q}xd8$ 30. $\mathbb{W}d7\#$.

b) 18... $\mathbb{W}d8$! 19. $\mathbb{W}h6$ and White threatens e5 or $\mathbb{E}h3-g3$. The only defence is 19...f5, but even then Black's situation remains critical.

If 15...f6, then 16.♘xg6 fxg5 17.♗xh5 ♗f7 18.f3 with a decisive attack.

15... $\mathbb{W}c6$ 16. $\mathbb{Q}b1$ $\mathbb{Q}a6$ 17. $\mathbb{E}h3$ $\mathbb{W}c4$ 18. $\mathbb{E}g3$ is another variation from Kasparov. After 18... $\mathbb{W}f1\uparrow$ 19. $\mathbb{Q}d2$ $\mathbb{W}b5$ White can either repeat moves or sacrifice by 20. $\mathbb{Q}xh5$ $\mathbb{Q}c4\uparrow$ 21. $\mathbb{Q}e1$ $\mathbb{Q}b2$ 22. $\mathbb{E}c1$ with attacking chances.

20. $\mathbb{Q}xf4$ $\mathbb{Q}c4?$

20... $\mathbb{W}xh4$ 21.e5 $\mathbb{W}e7$ was a better solution, although White has outstanding compensation for the pawn here.

21. $\mathbb{Q}xc4$ $\mathbb{E}xe4$ **Diagram 22-3****22.f3!**

The weakness of the g6-pawn forces Black to go into a lost endgame.

35...bx c 36. $\mathbb{Q}xc4$ $\mathbb{E}d4\#$ is answered by 37. $\mathbb{Q}e5!$ and Black cannot take the h4-pawn: 37... $\mathbb{E}xh4?$ 38.f4! (threatening $\mathbb{Q}g8$ and then $\mathbb{E}h7\#$) 38... $\mathbb{Q}b1$ 39. $\mathbb{Q}g8$ g5 40.f5 g4 41. $\mathbb{Q}f6+$

36.g4 hxg4 37.fxg4 $\mathbb{E}f8\#$ 38. $\mathbb{Q}g3$

Black resigned, since the threat of g4-g5# means that he does not have time to save his b5-pawn.

In the following example we can observe how cleverly Kasparov builds up the pressure against the opposing centre.

T.Shaked – G.Kasparov

Tilburg 1997

1.d4 $\mathbb{Q}f6$ 2.c4 g6 3. $\mathbb{Q}c3$ d5 4.cxd5 $\mathbb{Q}xd5$ 5.e4 $\mathbb{Q}xc3$ 6.bxc3 $\mathbb{Q}g7$ 7. $\mathbb{Q}e3$

7.♕c4 intending ♜e2 is the classical variation. But in the 1980s the very natural variations with 7.♗f3 c5 8.♗e3 or 8.♗b1 were rediscovered.

7...c5 8.♗d2

This flexible set-up has some advantages. But in this game Kasparov demonstrates his fantastic opening preparation.

8...♝a5 9.♗b1

9.♗f3 transposes to the 7.♗f3 variation.

Diagram 22-4

9...b6 10.♗b5† ♜d7 11.♗e2

At the time this game was played, this subtle idea of Karpov's was the latest word in fashion. White aims for the ♜f3-♜e2 set-up.

11.♗d3 ♜c6 12.cxd4 is also possible.

11...♜c6

11...cxd4 12.cxd4 ♜xd2† 13.♗xd2 is slightly better for White, since the black bishop is not so well placed on d7.

The alternative is 11...♜c6 12.♗f3 0-0 13.♗c1 and White intends d4-d5.

12.♗d3 ♜d7!

12...0-0 is natural, but Kasparov had a specific idea of acting very quickly against the white centre.

13.♗e2

In the later game, Timman – Shirov, Wijk aan Zee 1999, White tried a risky plan with 13.h4, but Black countered with: 13...♝d8 14.h5 ♜e5! 15.dxe5 c4 16.♗d4 cxd3 17.♗f3 ♜xe4 18.h6 ♜f8†

Diagram 22-5

13...♝d8!

A rook is very often well placed on the same file as the opposing queen. Here, this opposition of the major pieces offers Black some tactical options. In particular, it hinders his opponent's castling.

14.f3

14.0-0 is followed by: 14...cxd4 15.cxd4 ♜xd2 16.♗xd2 ♜c5! 17.♗bc1 ♜xd3 (or even 17...♝xd4? 18.♗xd4 ♜xd4 19.♗c3 ♜xd3 20.♗xh8 ♜xe4†) 18.♗xc6 0-0 19.♗c7 (19.♗g5 ♜c8†) 19...♝c8 20.♗c3=

If 14.d5, then 14...♜e5∞.

14...0-0 15.h4 h5

Kasparov pointed out another possibility: 15...cxd4 16.cxd4 ♜e5 17.♗xa5 ♜xd3† 18.♗d2 bxa5 19.♗xd3 a6 20.♗c3 ♜xd4 21.♗d2 e5 22.♗e2 f5∞

18.d5?

White has lost the thread. 18.0–0 is better: 18...♔e5 (18...cxd4 19.cxd4 ♜xd2 20.♔xd2 ♔c5 21.♔b5±) 19.dxe5 c4 20.♔d4 cxd3 21.e6 ♜xd4† 22.cxd4 ♜xd2 23.exf7† ♜xf7 24.♔xd2 ♜xd4 25.♔c7=

19.0–0 would be met, not with the unclear 19...♝xd5 20.exd5 ♜xd5 21.♔f4∞, but rather by 19...♝d7!† (preparing ...e6).

19...♝c4 20.♛f4??

Diagram 22-7

A blunder, which immediately loses the game.

An interesting variation is given by Kasparov: 20.♛d1 e6? 21.♔xd8 ♜xd8 22.♔d3 ♔e3 23.♛d2 ♜h6 24.f4 ♔xg2† 25.♔f2 ♔xf4! 26.♔xf4 e5 27.♔cg1 ♔xf4 28.♛b2 c4!+.

There is also the more resilient 20.♛d3 ♔a6 21.0–0 ♔a3 22.♛d2 ♔xb1 23.♔xb1 ♔xe2 24.♛xe2 ♜xc3† and Black wins ‘only’ a pawn.

20...♔e5

The queen is trapped, so White resigned.

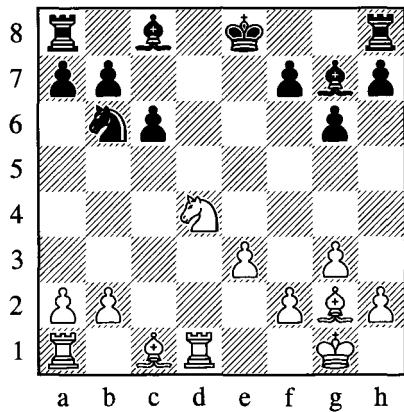

This impressive game had quite an influence on chess fashion, and the ♛d2 variation has not been so popular since.

Playing against a classical centre is generally a harder job than supporting such a centre. So in our test we shall try, along with Kasparov, to attack the centre whenever possible, to weaken it or even to break it up! The Grünfeld Defence requires active and dynamic play from us!

The elimination method

We have already learned a few different methods for the calculation of variations. Just like the ideas of ‘candidate moves’ or the ‘comparison method’, the elimination method can save us time and energy (please see Chapter 17 of *Build Up Your Chess 3*).

But here I must emphasize yet again that there is no universal way of calculating variations. Even the elimination method only helps us in specific situations. **You must use the correct method for the appropriate situation!**

Sometimes it is rather difficult to calculate precisely and to evaluate the strongest move. But it is often simpler to be convinced that all the other moves are bad. By using the elimination method – **eliminating all bad moves from any further calculation** – we can come to a correct decision more easily and quickly.

The elimination method is used mainly in defence. If, for example, we see that all other moves will lose, then we can, if time is short, play the only remaining move without calculation, in the hope that it can still save us. But in this case it is very important to find **all the candidate moves** and to calculate the variations accurately. Otherwise we can come to a false conclusion.

The elimination method can also be used as a safeguard, in order to confirm that the move we want to play is actually the best one. Then we perhaps do not need to calculate the main variation with quite the same precision, since all we have to do is to establish that the other moves are worse.

Whenever the elimination method is used in a position in which we stand better, then we absolutely have to calculate the main move. Otherwise there is the danger that we may examine and discard a drawing variation, but then go on to make a losing move without checking it! Nevertheless, we can save some energy if we see that the main move does not cause us any problems and is sufficient for at least a draw. After that, there is no need for us to calculate it any further.

The following examples show how the elimination method is used in praxis. Try first of all to solve the problems of these positions for yourself before comparing what you have found with the solutions.

Diagram 23-1

In this position Black has three reasonable candidate moves: 1... $\mathbb{Q}d7$, 1... $\mathbb{Q}e7$ and 1... $\mathbb{Q}e8$. We first analyse the two 'natural' moves, 1... $\mathbb{Q}e7$ and 1... $\mathbb{Q}d7$.

1... $\mathbb{Q}e7?$ loses after 2.e5! fxe5 (otherwise e5-e6 will be played with an easy win) 3. $\mathbb{Q}xe5\odot$. Here it is unfortunately Black to move: 3... $\mathbb{Q}f7$ 4.f6! gxf6† 5. $\mathbb{Q}f5+-$ and Black is once more in zugzwang. He must abandon one of the key squares (e6 or g6) to the white king.

1... $\mathbb{Q}d7?$ is followed by 2.e5 fxe5 3.g5! (not 3. $\mathbb{Q}xe5?$ $\mathbb{Q}e7=$) 3...hxg5. Otherwise White simply exchanges on h6, captures the e5-pawn, then puts his pawn on f6 and wins by the well-known triangulation manoeuvre. 4.f6! $\mathbb{Q}e8$ (4...gxf6 5.h6+–) 5.fxg7 $\mathbb{Q}f7$ 6.h6 g4 7. $\mathbb{Q}e4\odot$ Here we have a position of mutual zugzwang, with Black to move! 7... $\mathbb{Q}g8$ 8. $\mathbb{Q}f5+-$ with the double threat of $\mathbb{Q}g6$ and $\mathbb{Q}xg4$.

1... $\mathbb{Q}e8!$

Once we have analysed the other two moves precisely, we need waste no time on making this third move, even without calculating any variations, since the other moves lose and can therefore be eliminated!

2. $\mathbb{Q}e6$

2. $\mathbb{Q}d6$ doesn't change anything: 2... $\mathbb{Q}f7$ 3. $\mathbb{Q}d7$ $\mathbb{Q}f8$ 4. $\mathbb{Q}e6$ $\mathbb{Q}e8$ 5.e5 fxe5 and now 6.f6?? would even lose to 6...gxf6 7. $\mathbb{Q}xf6$ e4 8.g5 $\mathbb{Q}f8!+-$.

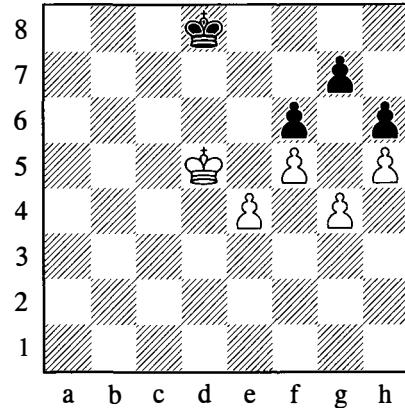

2... $\mathbb{Q}f8$ 3.e5

3.g5? is bad, because of 3...hxg5 4.h6 gxh6 5. $\mathbb{Q}xf6$ g4 6.e5 g3 7.e6 g2 8.e7† $\mathbb{Q}e8+-$ and White is one tempo short.

3...fxe5 4. $\mathbb{Q}xe5$ $\mathbb{Q}e7!=$

The squares e7 and e5 are corresponding squares. Black should always ensure that he gets this position with White to move.

G.Ravinsky – V.Antoshin

Moscow 1958

There are three possibilities: 1... $\mathbb{Q}f6$, 1... $\mathbb{Q}xh3\#$ and 1... $\mathbb{Q}f7$.

It is very easy to eliminate the move 1... $\mathbb{Q}f6$?. After 2. $\mathbb{Q}xf6\#$ $\mathbb{Q}5xf6$ 3. $\mathbb{Q}xf4$ $\mathbb{Q}xf4$ 4. $\mathbb{Q}xe7$, White wins on the spot.

To find the correct solution, you should also calculate accurately the tempting variation 1... $\mathbb{Q}xh3\#$. This was the actual game continuation.

1... $\mathbb{Q}xh3\#$! 2. $\mathbb{W}xh3$ $\mathbb{Q}h5$

White now has a strong intermediate move.

3. $\mathbb{Q}c5!$

3. $\mathbb{W}g2$? would be worse: 3... $\mathbb{Q}h2$ 4. $\mathbb{W}xh2$ $\mathbb{Q}xh2\#$ 5. $\mathbb{Q}xh2$ $\mathbb{W}xg4\#$

After 3. $\mathbb{W}f1?$ $\mathbb{Q}h2\#$ 4. $\mathbb{Q}h1$ $\mathbb{W}xg4$ 5. $\mathbb{W}g2$ $\mathbb{W}f5$ Black would have a dangerous attack.

3... $\mathbb{W}c8$

3... $dxc5$? 4. $\mathbb{W}g2+-$

4. $\mathbb{W}g2$ $\mathbb{Q}h4$ 5. $\mathbb{W}d5\#$ $\mathbb{Q}h8$?

5... $\mathbb{E}f7$ would be more stubborn, although White is still doing well after 6. $\mathbb{Q}e6\pm$.

6.f3 $\mathbb{Q}h2\#$ 7. $\mathbb{Q}g2$ $dxc5$ 8. $\mathbb{W}g5!+-$ $\mathbb{W}c6$ 9. $\mathbb{W}xh4$
 $\mathbb{E}xf3$ 10. $\mathbb{Q}xh2$ $\mathbb{W}c7\#$ 11. $\mathbb{Q}g2$ $\mathbb{W}c6$ 12. $\mathbb{Q}g1$

1-0

The correct move is:

1... $\mathbb{E}f7!$

It would be best to analyse this move too, since it also leads to a loss of material. But if we see that Black obtains some compensation, we can manage without any further consideration.

2. $\mathbb{Q}g5$ $\mathbb{E}g7!$ 3. $\mathbb{Q}xf4$ $\mathbb{Q}xf4$ 4. $\mathbb{Q}e6$

Diagram 23-4

If we see this position in our calculations and too quickly evaluate it as advantageous to White, then that can lead us to a false conclusion. This example shows that the elimination method must be employed with great care.

4... $\mathbb{E}f6$ 5. $\mathbb{Q}xg7$ $g5!$

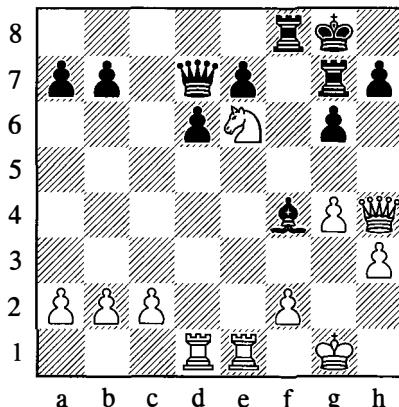

Now the white queen is in danger.

6. $\mathbb{W}h5$ $\mathbb{Q}xg7$ 7. $\mathbb{Q}d5$ $\mathbb{E}g6$ 8. $\mathbb{E}f5$

Knight against bishop

In this chapter we shall study endings in which the knight is at an advantage compared to the bishop.

The subject of bishop against knight is of great strategic importance and has already been discussed in my previous books (*Build Up Your Chess 2*, Chapter 6 and *Boost Your Chess 2*, Chapter 17), as well as in Chapter 13 of this volume.

We established that a knight needs **protected squares** and must get up close to the opposing pieces; it is better when the struggle is on a **single flank** or in a **closed position**. The knight is very effective at setting up a **barrier** to the opposing king, or in constructing a **fortress**.

In contrast to the bishop, a knight is a much more agile piece and can attack in turn squares of both colours.

For the evaluation of these endings, the pawn structure plays a very important role, because **pawns are able to limit the activity of minor pieces** quite considerably.

A safe pawn set-up in the struggle against a bishop is, of course, achieved by placing the pawns on the opposite colour of squares to that of the bishop. However, it is sometimes also possible to restrict the activity of the bishop with pawns positioned on the 'wrong' squares.

The ending of knight and pawn against bishop

In some cases the bishop can successfully prevent the promotion of the pawn, even without the help of its king.

Advantages of the knight over the bishop

In the following, we take a look at some of the typical advantages and ideas for the stronger side, as well as some defensive options for the side with the bishop.

Barriers

The barrier is an important method to keep the opposing king out of the game. Barriers are useful not only in defence, but also in better positions.

ARTUR YUSUPOV

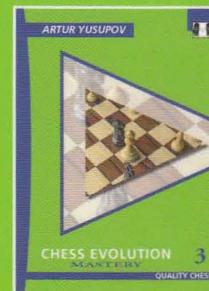

Artur Yusupov was ranked No. 3 in the world from 1986 to 1992, just behind the legendary Karpov and Kasparov. He has won everything there is to win in chess except for the World Championship. In recent years he has mainly worked as a chess trainer with players ranging from current World Champion Anand to local amateurs in Germany, where he resides.

BOOST YOUR CHESS MASTERY

Boost Your Chess 3 continues Artur Yusupov's complete course of chess improvement. The Fundamentals series showed players the basic ideas they should know. The Beyond the Basics series set off on the road to mastery, and now in the Mastery series we arrive at our final destination. Yusupov guides the reader using carefully selected positions and advice. This new understanding is then tested by a series of puzzles.
